Fluorescent liquid is used along with a Black light in the Magnaglo Magnaflux system. Darkened room is required for this procedure. The crack will appear as a glowing line. Complete demagnetizing of component upon completion is required on both procedures. Magnetic particle inspection applies to ferrous materials only.

PENETRANT INSPECTION

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

GETtheMANUALS.org

Zyglo

The Zyglo process coats material with a fluorescent dye penetrant. Component is often warmed to expand cracks that will be penetrated by the dye. Using darkened room and Black light, component is inspected for cracks. Crack will glow brightly.

Developing solution is often used to enhance results. Parts made of any material, such as aluminum cylinder heads or plastics, may be tested using this process.

Dye Check

Penetrating dye is sprayed on the previously cleaned component. Dye is left on component for 5-45 minutes, depending upon material density. Component is then wiped clean and sprayed with a developing solution. Surface cracks will show up as a bright line.

ULTRASONIC INSPECTION

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

If an expensive part is suspected of internal cracking, ultrasonic testing is used. Sound waves are used for component inspection.

X-RAY INSPECTION

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

This form of inspection is used on highly stressed components. X-ray inspection may be used to detect internal and external flaws in any material.

PRESSURE TESTING

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen**

GETtheMANUALS.org

to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Cylinder heads can be tested for cracks using a pressure tester. Pressure testing is performed by plugging all but one of the holes of cylinder head and injecting air or water into the open passage.

Leaks are indicated by the appearance of wet or damp areas when using water. When air is used, it is necessary to spray the head surface with a soap solution. Bubbles will indicate a leak. Cylinder head may also be submerged in water heated to specified temperature to check for cracks created during heat expansion.

CLEANING PROCEDURES

*** PLEASE READ THIS FIRST ***

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

GENERAL

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

All components of an engine do not have the same cleaning requirements. Physical methods include bead blasting and manual removal. Chemical methods include solvent blast, solvent tank, hot tank, cold tank and steam cleaning of components.

BEAD BLASTING

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen**

GETtheMANUALS.org

to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Manual removal of deposits may be required prior to bead blasting, followed by some other cleaning method. Carbon, paint and rust may be removed using bead blasting method. Components must be free of oil and grease prior to bead blasting. Beads will stick to grease or oil soaked areas causing area not to be cleaned.

Use air pressure to remove all trapped residual beads from component after cleaning. After cleaning internal engine parts made of aluminum, wash thoroughly with hot soapy water. Component must be thoroughly cleaned as glass beads will enter engine oil resulting in bearing damage.

CHEMICAL CLEANING

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Solvent tank is used for cleaning oily residue from components. Solvent blasting sprays solvent through a siphon gun using compressed air.

The hot tank, using heated caustic solvents, is used for cleaning ferrous materials only. DO NOT clean aluminum parts such as cylinder heads, bearings or other soft metals using the hot tank. After cleaning, flush parts with hot water.

A non-ferrous part will be ruined and caustic solution will be diluted if placed in the hot tank. Always use eye protection and gloves when using the hot tank.

Use of a cold tank is for cleaning aluminum cylinder heads, carburetors and other soft metals. A less caustic and unheated solution is used. Parts may be left in the tank for several hours without damage. After cleaning, flush parts with hot water.

Steam cleaning, with boiling hot water sprayed at high pressure, is recommended as the final cleaning process when using either hot or cold tank cleaning.

COMPONENT CLEANING

*** PLEASE READ THIS FIRST ***

GETtheMANUALS.org

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

SHEET METAL PARTS

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Examples of sheet metal parts are rocker covers, front and side covers, oil pan and bellhousing dust cover. Glass bead blasting or hot tank may be used for cleaning.

Ensure all mating surfaces are flat. Deformed surfaces should be straightened. Check all sheet metal parts for cracks and dents.

INTAKE & EXHAUST MANIFOLDS

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Using solvent cleaning or bead blasting, clean manifolds for inspection. If intake manifold has an exhaust crossover, all carbon deposits must be removed. Inspect manifolds for cracks, burned or eroded areas, corrosion and damage to fasteners.

Exhaust heat and products of combustion cause threads of fasteners to corrode. Replace studs and bolts as necessary. On "V" type intake manifolds, sheet metal oil shield must be removed for proper cleaning and inspection. Ensure all manifold parting surfaces are flat and free of burrs.

CYLINDER HEAD REPLACEMENT

GETtheMANUALS.org

*** PLEASE READ THIS FIRST ***

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

REMOVAL

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Remove intake and exhaust manifolds and valve cover. Cylinder head and camshaft carrier bolts (if equipped) should be removed only when engine is cold. On many aluminum cylinder heads, removal while hot will cause cylinder head warpage. Mark rocker arm or overhead cam components for location.

Remove rocker arm components or overhead cam components. Components must be installed in original location. Individual design rocker arms may utilize shafts, ball-type pedestal mounts or no rocker arms. For all design types, wire components together and identify according to corresponding valve. Remove cylinder head bolts. Note length and location. Some applications require cylinder head bolts be removed in proper sequence to prevent cylinder head damage. See **Fig. 1**. Remove cylinder head.

INSTALLATION

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Ensure all surfaces and head bolts are clean. Check that head bolt holes of cylinder block are clean and dry to prevent block damage when bolts are tightened. Clean threads with tap to ensure accurate bolt torque.

GETtheMANUALS.org

Install head gasket on cylinder block. Some manufacturers may recommend sealant be applied to head gasket prior to installation. Note that all holes are aligned. Some gasket applications may be marked so that certain area faces upward. Install cylinder head using care not to damage head gasket. Ensure cylinder head is fully seated on cylinder block.

Some applications require head bolts be coated with sealant prior to installation. This is done if head bolts are exposed to coolant passages. Some applications require head bolts be coated with light coat of engine oil.

Install head bolts. Head bolts should be tightened in proper steps and sequence to specification. See **Fig. 1**. Install remaining components. Tighten all bolts to specification. Adjust valves if required. See VALVE ADJUSTMENT.

NOTE: **Some manufacturers require that head bolts be retightened after specified amount of operation. This must be done to prevent head gasket failure.**

Fig. 1: Typical Cylinder Head Tightening or Loosening Sequence

VALVE ADJUSTMENT

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

GETtheMANUALS.org

Engine specifications will indicate valve train clearance and temperature at which adjustment is to be made on most models. In most cases, adjustment will be made with a cold engine. In some cases, both a cold and a hot clearance will be given for maintenance convenience.

On some models, adjustment is not required. Rocker arms are tightened to specification and valve lash is automatically set. On some models with push rod actuated valve train, adjustment is made at push rod end of rocker arm while other models do not require adjustment.

Clearance will be checked between tip of rocker arm and tip of valve stem in proper sequence using a feeler gauge. Adjustment is made by rotating adjusting screw until proper clearance is obtained. Lock nut is then tightened. Engine will be rotated to obtain all valve adjustments to manufacturer's specifications.

Some models require hydraulic lifter to be bled down and clearance measured. Push rods of different length can be used to obtain proper clearance. Clearance will be checked between tip of rocker arm and tip of valve stem in proper sequence using a feeler gauge.

Overhead cam engines designed without rocker arms actuate valves directly on a cam follower. A hardened, removable disc is installed between the cam lobe and lifter. Clearance will be checked between cam heel and adjusting disc in proper sequence using a feeler gauge. Engine will be rotated to obtain all valve adjustments.

On overhead cam engines designed with rocker arms, adjustment is made at valve end of rocker arm. Ensure valve to be adjusted is riding on heel of cam on all engines. Clearance will be checked between tip of rocker arm and tip of valve stem in proper sequence using a feeler gauge. Adjustment is made by rotating adjusting screw until proper clearance is obtained. Lock nut is then tightened. Engine will be rotated to obtain all valve adjustments to manufacturer's specifications.

CYLINDER HEAD OVERHAUL

*** PLEASE READ THIS FIRST ***

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

CYLINDER HEAD DISASSEMBLY

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES

GETtheMANUALS.org

section for complete overhaul procedures and specifications for the vehicle being repaired.

Mark valves for location. Using valve spring compressor, compress valve springs. Remove valve locks. Carefully release spring compressor. Remove retainer or rotator, valve spring, spring seat and valve. See **Fig. 2**.

Fig. 2: Exploded View of Valve Assemblies

CYLINDER HEAD CLEANING & INSPECTION

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Clean cylinder head and valve components using approved cleaning methods. Inspect cylinder head for cracks, damage or warped gasket surface. Place straightedge across gasket surface. Determine clearance at center of straightedge. Measure across both diagonals, longitudinal center line and across cylinder head at several points. See **Fig. 3**.

GETtheMANUALS.org

On cast iron cylinder heads, if warpage exceeds .003" (.08 mm) in a 6" span, or .006" (.15 mm) over total length, cylinder head must be resurfaced. On most aluminum cylinder heads, if warpage exceeds .002" (.05 mm) in any area, cylinder head must be resurfaced. Warpage specification may vary by manufacturer. If warpage exceeds specification on some cylinder heads, cylinder head must be replaced.

Cylinder head thickness should be measured to determine amount of material which can be removed before replacement is required. Cylinder head thickness must not be less than the manufacturer's specification.

If cylinder head required resurfacing, it may not align properly with intake manifold. On "V" type engines, misalignment is corrected by machining intake manifold surface that contacts cylinder head. Cylinder head may be machined on surface that contacts intake manifold. Using oil stone, remove burrs or scratches from all sealing surfaces.

Fig. 3: Checking Cylinder Head for Warpage

VALVE SPRINGS

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

GETtheMANUALS.org

Inspect valve springs for corroded or pitted valve spring surfaces which may lead to breakage. Polished spring ends caused by a rotating spring indicate that spring surge has occurred. Replace springs showing evidence of these conditions.

Inspect valve springs for squareness using a 90-degree straightedge. See **Fig. 4**. Replace valve spring if out-of-square exceeds manufacturer's specification.

Fig. 4: Checking Valve Spring Squareness

Using vernier caliper, measure free length of all valve springs. Replace springs if not within specification. Using valve spring tester, test valve spring pressure at installed and compressed heights. See **Fig. 5**.

Usually compressed height is installed height minus valve lift. Replace valve spring if not within specification. It is recommended to replace all valve springs when overhauling cylinder head. Valve springs may need to be installed with color coded end or small coils at specified area according to manufacturer.

GETtheMANUALS.org

Fig. 5: Checking Valve Spring Pressure

VALVE GUIDE

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Measuring Valve Guide Clearance

Check valve stem-to-guide clearance. Ensure valve stem diameter is within specification. Install valve in valve guide. Install dial indicator assembly on cylinder head with tip resting against valve stem just above valve

GETtheMANUALS.org

guide. See **Fig. 6**.

Fig. 6: Measuring Valve Stem-to-Guide Clearance

Lower valve approximately 1/16" below valve seat. Push valve stem against valve guide as far as possible. Adjust dial indicator to zero. Push valve stem in opposite direction and note reading. Clearance must be within specification.

If valve guide clearance exceeds specification, valves with oversize stems may be used and valve guides are reamed to larger size or valve guide must be replaced. On some applications, a false guide is installed, then reamed to proper specification. Valve guide reamer set is used to ream valve guide to obtain proper clearance for new valve.

GETtheMANUALS.org

Reaming Valve Guide

Select proper reamer for size of valve stem. Reamer must be of proper length to provide clean cut through entire length of valve guide. Install reamer in valve guide and rotate to cut valve guide. See **Fig. 7**.

GETtheMANUALS.org

Fig. 7: Reaming Valve Guides

GETtheMANUALS.org

Replacing Valve Guide

Replace valve guide if clearance exceeds specification. Valve guides are either pressed, hammered or shrunk in place, depending upon cylinder head design and type of metal used.

Remove valve guide from cylinder head by pressing or tapping on a stepped drift. See **Fig. 8**. Once valve guide is installed, distance from cylinder head to top of valve guide must be checked. This distance must be within specification.

Aluminum heads are often heated before installing valve guide. Valve guide is sometimes cooled in dry ice prior to installation. Combination of a heated cylinder head and cooled valve guide ensures a tight guide fit upon assembly. The new guide must be reamed to specification.

Fig. 8: Typical Valve Guide Remover & Installer

VALVES & VALVE SEATS

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Valve Grinding

Valve stem O.D. should be measured in several areas to indicate amount of wear. Replace valve if not within specification. Valve margin area should be measured to ensure that valve can be ground. See **Fig. 9**.

If valve margin is less than specification, the valves will be burned. Valve must be replaced. Due to minimum margin dimensions during manufacture, some new type valves cannot be reground. Some manufacturers use stellite coated valves that must NOT be machined. Valves can only be lapped into valve seat.

GETtheMANUALS.org

CAUTION: Some valves are sodium filled. Extreme care must be used when disposing of damaged or worn sodium-filled valves.

Fig. 9: Measuring Valve Head Margin

Resurface valve to proper angle specification using valve grinding machine. Follow manufacturer's instructions for valve grinding machine. Specifications may indicate a different valve face angle than seat angle. Measure valve margin after grinding. Replace valve if not within specification. Valve stem tip can be refinished using valve grinding machine.

Valve Lapping

During valve lapping of recently designed valves, be sure to follow manufacturer's recommendations. Surface hardening and materials used with some valves do not permit lapping. Lapping process will remove excessive amounts of the hardened surface.

Valve lapping is done to ensure adequate sealing between valve face and seat. Use either a hand drill or lapping stick with suction cup attached.

Moisten and attach suction cup to valve. Lubricate valve stem and guide. Apply a thin coat of fine valve grinding compound between valve and seat. Rotate lapping tool between the palms or with hand drill.

Lift valve upward off the seat and change position often. This is done to prevent grooving of valve seat. Lap valve until a smooth polished seat is obtained. Thoroughly clean grinding compound from components. Valve-to-valve seat concentricity should be checked. See **VALVE SEAT CONCENTRICITY**.

GETtheMANUALS.org

CAUTION: Valve guides must be in good condition and free of carbon deposits prior to valve seat grinding. Some engines contain an induction hardened valve seat. Excessive material removal will damage valve seats.

Valve Seat Grinding

Select coarse stone of correct size and angle for seat to be ground. Ensure stone is true and has a smooth surface. Select correct size pilot for valve guide dimension. Install pilot in valve guide. Lightly lubricate pilot shaft. Install stone on pilot. Move stone off and on the seat approximately 2 times per second during grinding operation.

Select a fine stone to finish grinding operation. Various angle grinding stones are used to center and narrow the valve seat as required. See **Fig. 10**.

Fig. 10: Adjusting Valve Seat Width

Valve Seat Replacement

Replacement of valve seat inserts is done by cutting out the old insert and machining an oversize insert bore. Replacement oversize insert is usually cooled and the cylinder head is sometimes warmed. Valve seat is pressed into the head. This operation requires specialized machine shop equipment.

GETtheMANUALS.org

Valve Seat Concentricity

Using dial gauge, install gauge pilot in valve guide. Position gauge arm on the valve seat. Adjust dial indicator to zero. Rotate arm 360 degrees and note reading. Runout should not exceed specification.

To check valve-to-valve seat concentricity, coat valve face lightly with Prussian Blue dye. Install valve and rotate it on valve seat. If pattern is even and entire seat is coated at valve contact point, valve is concentric with the valve seat.

CYLINDER HEAD REASSEMBLY

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Valve Stem Installed Height

Valve stem installed height must be checked when new valves are installed or when valves or valve seats have been ground. Install valve in valve guide. Measure distance from tip of valve stem to spring seat. See **Fig. 11**. Distance must be within specification to allow sufficient clearance for valve operation.

Remove valve and grind valve stem tip if height exceeds specification. Valve tips are surface hardened. DO NOT remove more than .010" (.25 mm) from tip. Chamfer sharp edge of reground valve tip. Recheck valve stem installed height.

GETtheMANUALS.org

Fig. 11: Measuring Valve Stem Installed Height

VALVE STEM OIL SEALS

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Valve stem oil seals must be installed on valve stem. See **Fig. 2**. Seals are needed due to pressure differential at the ends of valve guides. Atmospheric pressure above intake guide, combined with manifold vacuum below guide, causes oil to be drawn into the cylinder.

Exhaust guides also have pressure differential created by exhaust gas flowing past the guide, creating a low pressure area. This low pressure area draws oil into the exhaust system.

Some manufacturers require that special color code or specified height valve stem oil seal be installed in

GETtheMANUALS.org

designated area.

Replacement (On-Vehicle)

Mark rocker arm or overhead cam components for location. Remove rocker arm components or overhead cam components. Components must be installed in original location. Remove spark plugs. Valve stem oil seals may be replaced by holding valves against seats using air pressure.

Air pressure must be installed in cylinder using an adapter for spark plug hole. An adapter can be constructed by welding air hose connection to spark plug body with porcelain removed.

Rotate engine until piston is at top of stroke. Install adapter in spark plug hole. Apply a minimum of 140 psi (9.8 kg/cm^2) line pressure to adapter. Air pressure should hold valve closed. If air pressure does not hold valve closed, check for damaged or bent valve. Cylinder head must be removed for service.

Using valve spring compressor, compress valve springs. Remove valve locks. Carefully release spring compressor. Remove retainer or rotator and valve spring. Remove valve stem oil seal.

If oversize valves have been installed, oversize oil seals must be used. Coat valve stem with engine oil. Install protective sleeve over end of valve stem. Install new oil seal over valve stem and seat on valve guide. Remove protective sleeve. Install spring seat, valve spring and retainer or rotator. Compress spring and install valve locks. Remove spring compressor. Ensure valve locks are fully seated.

Install rocker arms or overhead cam components. Tighten all bolts to specification. Adjust valves if required. Remove adapter. Install spark plugs, valve cover and gasket.

VALVE SPRING INSTALLED HEIGHT

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Valve spring installed height should be checked during reassembly. Measure height from lower edge of valve spring to the upper edge. DO NOT include valve spring seat or retainer. Distance must be within specification. If valves and/or seats have been ground, a valve spring shim may be required to correct spring height. See **Fig. 12**.

GETtheMANUALS.org

Fig. 12: Measuring Valve Spring Installed Height

ROCKER ARMS & ASSEMBLIES

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Rocker Studs

Rocker studs are either threaded or pressed in place. Threaded studs are removed by locking 2 nuts on the stud. Unscrew the stud by turning the jam nut. Coat new stud threads with Loctite and install. Tighten to specification.

Pressed-in stud can be removed using a stud puller. Ream stud bore to proper specification and press in a new oversize stud. Pressed-in studs are often replaced by cutting threads in the stud bore to accept a threaded stud.

Rocker Arms & Shafts

Mark rocker arms for location. Remove rocker arm retaining bolts. Remove rocker arms. Inspect rocker arms, shafts, bushings and pivot balls (if equipped) for excessive wear. Inspect rocker arms for wear in valve stem

GETtheMANUALS.org

contact area. Measure rocker arm bushing I.D. Replace bushings if excessively worn.

The rocker arm valve stem contact point may be reground, using special fixture for valve grinding machine. Remove minimum amount of material as possible. Ensure all oil passages are clear. Install rocker arm components in original location. Ensure rocker arm is properly seated in push rod. Tighten bolts to specification. Adjust valves if required. See **VALVE ADJUSTMENT**.

PUSH RODS

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Remove rocker arms. Mark push rods for location. Remove push rods. Push rods can be steel or aluminum, solid or hollow. Hollow push rods must be internally cleaned to ensure oil passage to rocker arms is cleaned. Check push rods for damage, such as loose ends on steel tipped aluminum types.

Check push rod for straightness. Roll push rod on a flat surface. Using feeler gauge, check clearance at center. Replace push rod if bent. The push rod can also be supported at each end and rotated. A dial indicator is used to detect a bent area in the push rod.

Lubricate ends of push rod and install push rod in original location. Ensure push rod is properly seated in lifter. Install rocker arm. Tighten bolts to specification. Adjust valves if required. See **VALVE ADJUSTMENT**.

LIFTERS

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Hydraulic Lifters

Before replacing a hydraulic lifter for noisy operation, ensure noise is not caused by worn rocker arms or valve tips. Also ensure sufficient oil pressure exists. Hydraulic lifters must be installed in original location. Remove rocker arm assembly and push rod. Mark components for location. Some applications require intake manifold, cylinder head or lifter cover removal. Remove lifter retainer plate (if used). To remove lifters, use a hydraulic lifter remover or magnet. Different type lifters are used. See **Fig. 13**.

GETtheMANUALS.org

On sticking lifters, disassemble and clean lifter. DO NOT mix lifter components or positions. Parts are select-fitted and are not interchangeable. Inspect all components for wear. Note amount of wear in lifter body-to-camshaft contact area. Surface must have smooth and convex contact face. If wear is apparent, carefully inspect cam lobe.

Inspect push rod contact area and lifter body for scoring or signs of wear. If body is scored, inspect lifter bore for damage and lack of lubrication. On roller type lifters, inspect roller for flaking, pitting, loss of needle bearings and roughness during rotation.

Measure lifter body O.D. in several areas. Measure lifter bore I.D. Ensure components or oil clearance is within specification. Some models offer oversize lifters. Replace lifter if damaged.

If lifter check valve is not operating, obstructions may be preventing it from closing or valve spring may be broken. Clean or replace components as necessary.

Check plunger operation. Plunger should drop to bottom of the body by its own weight when assembled dry. If plunger is not free, soak lifter in solvent to dissolve deposits.

Lifter leak-down test can be performed on lifter. Lifter must be filled with special test oil. New lifters contain special test oil. Using lifter leak-down tester, perform leak-down test following manufacturer's instructions. If leak-down time is not within specifications, replace lifter assembly.

Lifters should be soaked in clean engine oil several hours prior to installation. Coat lifter base, roller (if equipped) and lifter body with ample amount of Molykote or camshaft lubricant. See **Fig. 13**. Install lifter in original location. Install remaining components. Valve lash adjustment is not required on most hydraulic lifters. Preload of hydraulic lifter is automatic. Some models may require adjustment.

NOTE: **Some manufacturers require that a crankcase conditioner be added to engine oil and engine operated for specified amount of time to aid in lifter break-in procedure if new lifters or camshaft are installed.**

GETtheMANUALS.org

Fig. 13: Typical Hydraulic Valve Lifter Assemblies

Mechanical Lifters

Lifter assemblies must be installed in original locations. Remove rocker arm assembly and push rod. Mark components for location. Some applications require intake manifold or lifter cover removal. Remove lifter retainer plate (if used). To remove lifters, use lifter remover or magnet.

GETtheMANUALS.org

Inspect push rod contact area and lifter body for scoring or signs of wear. If body is scored, inspect lifter bore for damage and lack of lubrication. Note amount of wear in lifter body-to-camshaft contact area. Surface must have smooth and convex contact face. If wear is apparent, carefully inspect cam lobe.

Coat lifter base, roller (if equipped) and lifter body with ample amount of Molykote or camshaft lubricant. Install lifter in original location. Install remaining components. Tighten bolts to specification. Adjust valves. See **VALVE ADJUSTMENT**.

Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Ridge in cylinder wall must be removed prior to piston removal. Failure to remove ridge prior to removing pistons will cause piston damage in piston ring lands or grooves.

With piston at bottom dead center, place rag in bore to trap metal chips. Install ridge reamer in cylinder bore. Adjust ridge reamer using manufacturer's instructions. Remove ridge using ridge reamer. DO NOT remove an excessive amount of material. Ensure ridge is completely removed.

PISTON & CONNECTING ROD REMOVAL

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

GETtheMANUALS.org

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Note top of piston. Some pistons may contain a notch, arrow or be marked FRONT. Piston must be installed in proper direction to prevent damage with valve operation.

Check that connecting rod and cap are numbered for cylinder location and which side of cylinder block the number faces. Proper cap and connecting rod must be installed together. Connecting rod cap must be installed on connecting rod in proper direction to ensure bearing lock procedure. Mark connecting rod and cap if necessary. Pistons must be installed in original location.

Remove cap retaining nuts or bolts. Remove bearing cap. Install tubing protectors on connecting rod bolts. This protects cylinder walls from scoring during removal. Ensure proper removal of ridge. Push piston and connecting rod from cylinder. Connecting rod boss can be tapped with a wooden dowel or hammer handle to aid in removal.

PISTON & CONNECTING ROD

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Disassembly

Using ring expander, remove piston rings. Remove piston pin retaining rings (if equipped). Note direction of piston installation on connecting rod. On pressed type piston pins, special fixtures and procedures according to manufacturer must be used to remove piston pins. Follow manufacturer's recommendations to avoid piston distortion or breakage.

Cleaning

Remove all carbon and varnish from piston. Pistons and connecting rods may be cleaned in cold type chemical tank. Using ring groove cleaner, clean all deposits from ring grooves. Ensure all deposits are cleaned from ring grooves to prevent ring breakage or sticking. DO NOT attempt to clean pistons with wire brush.

Inspection

Inspect pistons for nicks, scoring, cracks or damage in ring areas. Connecting rod should be checked for cracks using Magnaflux procedure. Piston diameter must be measured in manufacturer's specified area.

Using telescopic gauge and micrometer, measure piston pin bore of piston in 2 areas, 90 degrees apart. This is

GETtheMANUALS.org

done to check diameter and out-of-round.

Install proper bearing cap on connecting rod. Ensure bearing cap is installed in proper location. Tighten bolts or nuts to specification. Using inside micrometer, measure inside diameter in 2 areas, 90 degrees apart.

Connecting rod I.D. and out-of-round must be within specification. Measure piston pin bore I.D. and piston pin O.D. All components must be within specification. Subtract piston pin diameter from piston pin bore in piston and connecting rod to determine proper fit.

Connecting rod length must be measured from center of crankshaft journal inside diameter to center of piston pin bushing using proper caliper. Connecting rods must be the same length. Connecting rods should be checked on an alignment fixture for bent or twisted condition. Replace all components which are damaged or not within specification.

PISTON & CYLINDER BORE FIT

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Ensure cylinder is checked for taper, out-of-round and properly honed prior to checking piston and cylinder bore fit. See **CYLINDER BLOCK**. Using dial bore gauge, measure cylinder bore.

Measure piston skirt diameter at 90 degree angle to piston pin at specified area by manufacturer. Subtract piston diameter from cylinder bore diameter to determine piston-to-cylinder clearance. Clearance must be within specification. Mark piston for proper cylinder location.

ASSEMBLING PISTON & CONNECTING ROD

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Install piston on connecting rod for corresponding cylinder. Ensure reference marking on top of piston corresponds with connecting rod and cap number. See **Fig. 14**.

Lubricate piston pin and install in connecting rod. Ensure piston pin retainers are fully seated (if equipped). On

GETtheMANUALS.org

pressed type piston pins, follow manufacturer's recommended procedure to avoid distortion or breakage.

Fig. 14: Installing Typical Piston Pin

CHECKING PISTON RING CLEARANCES

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Piston rings must be checked for side clearance and end gap. To check end gap, install piston ring in cylinder in which it is to be installed. Using an inverted piston, push ring to bottom of cylinder in smallest cylinder diameter.

GETtheMANUALS.org

Using feeler gauge, check ring end gap. See **Fig. 15**. Piston ring end gap must be within specification. Ring breakage will occur if insufficient ring end gap exists.

Some manufacturers permit correcting insufficient ring end gap by using a fine file while other manufacturers recommend using another ring set. Mark rings for proper cylinder installation after checking end gap.

Fig. 15: Checking Piston Ring End Gap

For checking side clearance, install rings on piston. Using feeler gauge, measure clearance between piston ring and piston ring land. Check side clearance in several areas around piston. Side clearance must be within specification.

If side clearance is excessive, piston ring grooves can be machined to accept oversize piston rings (if available). Normal practice is to replace piston.

PISTON & CONNECTING ROD INSTALLATION

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes**

GETtheMANUALS.org

of cleaning, inspection, assembly and machine shop practice are included.

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Cylinders must be honed prior to piston installation. See **CYLINDER HONING** under CYLINDER BLOCK.

Install upper connecting rod bearings. Lubricate upper bearings with engine oil. Install lower bearings in rod caps. Ensure bearing tabs are properly seated. Position piston ring gaps according to manufacturer's recommendations. See **Fig. 16**. Lubricate pistons, rings and cylinder walls.

GETtheMANUALS.org

Fig. 16: Positioning Typical Piston Ring End Gap

Install ring compressor. Use care not to rotate piston rings. Compress rings with ring compressor. Install plastic tubing protectors over connecting rod bolts. Install piston and connecting rod assembly. Ensure piston notch, arrow or FRONT mark is toward front of engine. See **Fig. 17**.

Fig. 17: Installing Piston & Connecting Rod Assembly

Carefully tap piston into cylinder until rod bearing is seated on crankshaft journal. Remove protectors. Install rod cap and bearing. Lightly tighten connecting rod bolts. Repeat procedure for remaining cylinders. Check bearing clearance. See **MAIN & CONNECTING ROD BEARING CLEARANCE**.

Once clearance is checked, lubricate journals and bearings. Install bearing caps. Ensure marks are aligned on connecting rod and cap. Tighten rod nuts or bolts to specification. Ensure rod moves freely on crankshaft. Check connecting rod side clearance. See **CONNECTING ROD SIDE CLEARANCE**.

CONNECTING ROD SIDE CLEARANCE

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen**

GETtheMANUALS.org

to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Position connecting rod toward one side of crankshaft as far as possible. Using feeler gauge, measure clearance between side of connecting rod and crankshaft. See **Fig. 18**. Clearance must be within specification.

Check for improper bearing installation, wrong bearing cap or insufficient bearing clearance if side clearance is insufficient. Connecting rod may require machining to obtain proper clearance. Excessive clearance usually indicates excessive wear at crankshaft. Crankshaft must be repaired or replaced.

Fig. 18: Measuring Connecting Rod Side Clearance

MAIN & CONNECTING ROD BEARING CLEARANCE

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

GETtheMANUALS.org

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Plastigage Method

Plastigage method may be used to determine bearing clearance. Plastigage can be used with an engine in service or during reassembly. Plastigage material is oil soluble.

Ensure journals and bearings are free of oil or solvent. Oil or solvent will dissolve material and false reading will be obtained. Install small piece of Plastigage along full length of bearing journal. Install bearing cap in original location. Tighten bolts to specification.

CAUTION: DO NOT rotate crankshaft while Plastigage is installed. Bearing clearance will not be obtained if crankshaft is rotated.

Remove bearing cap. Compare Plastigage width with scale on Plastigage container to determine bearing clearance. See **Fig. 19**. Rotate crankshaft 90 degrees. Repeat procedure. This is done to check journal eccentricity. This procedure can be used to check oil clearance on both connecting rod and main bearings.

GETtheMANUALS.org

Fig. 19: Measuring Bearing Clearance

Micrometer & Telescopic Gauge Method

A micrometer is used to determine journal diameter, taper and out-of-round dimensions of the crankshaft. See **CLEANING & INSPECTION** under CRANKSHAFT & MAIN BEARINGS in this article.

With crankshaft removed, install bearings and caps in original location on cylinder block. Tighten bolts to specification. On connecting rods, install bearings and caps on connecting rods. Install proper connecting rod cap on corresponding rod. Ensure bearing cap is installed in original location. Tighten bolts to specification.

Using a telescopic gauge and micrometer or inside micrometer, measure inside diameter of connecting rod and main bearings bores. Subtract each crankshaft journal diameter from the corresponding inside bearing bore diameter. This is the bearing clearance.

CRANKSHAFT & MAIN BEARINGS

*** PLEASE READ THIS FIRST ***

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

REMOVAL

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Ensure all main bearing caps are marked for location on cylinder block. Some main bearing caps have an arrow stamped on them. The arrow must face timing belt or timing chain end of engine. Remove main bearing cap bolts. Remove main bearing caps. Carefully remove crankshaft. Use care not to bind crankshaft in cylinder block during removal.

CLEANING & INSPECTION

GETtheMANUALS.org

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Thoroughly clean crankshaft using solvent. Dry with compressed air. Ensure all oil passages are clear and free of sludge, rust, dirt and metal chips.

Inspect crankshaft for scoring and nicks. Inspect crankshaft for cracks using Magnaflux procedure. Inspect rear seal area for grooving or damage. Inspect bolt hole threads for damage. If pilot bearing or bushing is used, check pilot bearing or bushing fit in crankshaft. Inspect crankshaft gear for damaged or cracked teeth. Replace gear if damaged. Ensure oil passage plugs are tight (if equipped).

Using micrometer, measure all journals in 4 areas to determine journal taper, out-of-round and undersize. See **Fig. 20**. Some crankshafts can be reground to the next largest undersize, depending on the amount of wear or damage. Crankshafts with rolled fillet cannot be reground and must be replaced.

GETtheMANUALS.org

Fig. 20: Measuring Crankshaft Journals

Crankshaft journal runout should be checked. Install crankshaft in "V" blocks or bench center. Position dial indicator with tip resting on the main bearing journal area. See **Fig. 21**. Rotate crankshaft and note reading. Journal runout must not exceed specification. Repeat procedure on all main bearing journals. Crankshaft must be replaced if runout exceeds specification.

GETtheMANUALS.org

Fig. 21: Measuring Crankshaft Main Bearing Journal Runout

INSTALLATION

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Install upper main bearing in cylinder block. Ensure lock tab is properly located in cylinder block. Install bearings in main bearing caps. Ensure all oil passages are aligned. Install rear seal (if removed).

Ensure crankshaft journals are clean. Lubricate upper main bearings with clean engine oil. Carefully install crankshaft. Check each main bearing clearance using Plastigage method. See **MAIN & CONNECTING ROD BEARING CLEARANCE**.

Once clearance is checked, lubricate lower main bearing and journals. Install main bearing caps in original location. Install rear seal in rear main bearing cap (if removed). Some rear main bearing caps require sealant to be applied in corners to prevent oil leakage.

Install and tighten all bolts except thrust bearing cap to specification. Tighten thrust bearing cap bolts finger tight only. Some models require that thrust bearing be aligned. On most applications, crankshaft must be moved rearward then forward. Procedure may vary with manufacturer. Thrust bearing cap is then tightened to specification. Ensure crankshaft rotates freely. Crankshaft end play should be checked. See **CRANKSHAFT END PLAY**.

GETtheMANUALS.org

CRANKSHAFT END PLAY

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Dial Indicator Method

Crankshaft end play can be checked using dial indicator. Mount dial indicator on rear of cylinder block. Position dial indicator tip against rear of crankshaft. Ensure tip is resting against flat surface.

Pry crankshaft rearward. Adjust dial indicator to zero. Pry crankshaft forward and note reading. Crankshaft end play must be within specification. If end play is not within specification, check for faulty thrust bearing installation or worn crankshaft. Some applications offer oversize thrust bearings.

Feeler Gauge Method

Crankshaft end play can be checked using feeler gauge. Pry crankshaft rearward. Pry crankshaft forward. Using feeler gauge, measure clearance between crankshaft and thrust bearing surface. See **Fig. 22**.

GETtheMANUALS.org

Fig. 22: Checking Crankshaft End Play

Crankshaft end play must be within specification. If end play is not within specification, check for faulty thrust bearing installation or worn crankshaft. Some applications offer oversize thrust bearings.

CYLINDER BLOCK

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Block Cleaning

Only cast cylinder blocks should be hot tank cleaned. Aluminum cylinder blocks should be cleaned using cold tank method. Cylinder block is cleaned in order to remove carbon deposits, gasket residue and water jacket

GETtheMANUALS.org

scale. Remove oil gallery plugs, freeze plugs and cam bearings before cleaning block.

Block Inspection

Visually inspect the block. Check suspected areas for cracks using the Dye Penetrant inspection method. Block may be checked for cracks using the Magnaflux method.

Cracks are most commonly found at the bottom of cylinders, main bearing saddles, near expansion plugs and between cylinders and water jackets. Inspect lifter bores for damage. Inspect all head bolt holes for damaged threads. Threads should be cleaned using tap to ensure proper head bolt torque. Consult machine shop concerning possible welding and machining (if required).

Cylinder Bore Inspection

Inspect bore for scoring or roughness. Cylinder bore is dimensionally checked for out-of-round and taper using dial bore gauge. For determining out-of-round, measure cylinder parallel and perpendicular to the block center line. Difference in the 2 readings is the bore out-of-round. Cylinder bore must be checked at top, middle and bottom of piston travel area.

Bore taper is obtained by measuring bore at the top and bottom. If wear has exceeded allowable limits, block must be honed or bored to next available oversize piston dimension.

Cylinder Honing

Cylinder must be properly honed to allow new piston rings to properly seat. Cross-hatching at correct angle and depth is critical to lubrication of cylinder walls and pistons.

A flexible drive hone and power drill are commonly used. Drive hone must be lubricated during operation. Mix equal parts of kerosene and SAE 20W engine oil for lubrication.

Apply lubrication to cylinder wall. Operate cylinder hone from top to bottom of cylinder using even strokes to produce 45 degree cross-hatch pattern on the cylinder wall. DO NOT allow cylinder hone to extend below cylinder during operation.

Recheck bore dimension after final honing. Wash cylinder wall with hot soapy water to remove abrasive particles. Blow dry with compressed air. Coat cleaned cylinder walls with lubricating oil.

Deck Warpage

Check deck for damage or warped gasket surface. Place a straightedge across gasket surface of the deck. Using feeler gauge, measure clearance at center of straightedge. Measure across width and length of cylinder block at several points.

If warpage exceeds specifications, deck must be resurfaced. If warpage exceeds manufacturer's maximum tolerance for material removal, replace block.

NOTE: **Some manufacturers recommend that a total amount of material (cylinder head and cylinder block) can only be removed before components must be replaced.**

GETtheMANUALS.org

Deck Height

Distance from crankshaft center line to block deck is called the deck height. Measure and record front and rear main journals of crankshaft. To compute this distance, install crankshaft and retain with center main bearing and cap only. Measure distance from crankshaft journal to block deck, parallel to cylinder center line.

Add one half of main bearing journal diameter to distance from crankshaft journal to block deck. This dimension should be checked at front and rear of cylinder block. Both readings should be the same.

If difference exceeds specification, cylinder block must be repaired or replaced. Deck height and warpage should be corrected at the same time.

Main Bearing Bore & Alignment

For checking main bearing bore, remove all bearings from cylinder block and main bearing caps. Install main bearing caps in original location. Tighten bolts to specification. Using inside micrometer, measure main bearing bore in 2 areas 90 degrees apart. Determine bore size and out-of-round. If diameter is not within specification, block must be align-bored.

For checking alignment, place a straightedge along center line of main bearing saddles. Check for clearance between straightedge and main bearing saddles. Block must be align-bored if clearance exists.

Expansion Plug Removal

Drill hole in center of expansion plug. Remove with screwdriver or punch. Use care not to damage sealing surface.

Expansion Plug Installation

Ensure sealing surface is free of burrs. Coat expansion plug with sealer. Using wooden dowel or pipe of slightly smaller diameter, install expansion plug. Ensure expansion plug is evenly located.

Oil Gallery Plug Removal

Remove threaded oil gallery plugs using appropriate wrench. Soft press-in plugs are removed by drilling into plug and installing a sheet metal screw. Remove plug with slide hammer or pliers.

Oil Gallery Plug Installation

Ensure threads or sealing surface is clean. Coat threaded oil gallery plugs with sealer and install. Replacement soft press-in plugs are installed with a hammer and drift.

CAMSHAFT

*** PLEASE READ THIS FIRST ***

NOTE: Examples used in this article are general in nature and do not necessarily relate

GETtheMANUALS.org

to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

CLEANING & INSPECTION

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Clean camshaft with solvent. Ensure all oil passages are clear. Inspect cam lobes and bearing journals for pitting, flaking or scoring. Using micrometer, measure bearing journal O.D.

Support camshaft at each end with "V" blocks. Position dial indicator with tip resting on center bearing journal. Rotate camshaft and note camshaft runout reading. If reading exceeds specification, replace camshaft.

Check cam lobe lift by measuring base circle of camshaft using micrometer. Measure again at 90-degree angle to tip of cam lobe. Cam lift can be determined by subtracting base circle diameter from tip of cam lobe measurement.

Different lift dimensions are given for intake and exhaust cam lobes. Reading must be within specification. Replace camshaft if cam lobes or bearing journals are not within specification.

Inspect camshaft gear for chipped, eroded or damaged teeth. Replace gear if damaged. On camshafts using thrust plate, measure distance between thrust plate and camshaft shoulder. Replace thrust plate if not within specification.

CAMSHAFT BEARINGS

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

GETtheMANUALS.org

Removal & Installation

Remove camshaft rear plug. Camshaft bearing remover is assembled with shoulder resting against bearing to be removed according to manufacturer's instructions. Tighten puller nut until bearing is removed. Remove remaining bearings, leaving front and rear bearings until last. These bearings act as a guide for camshaft bearing remover.

To install new bearings, puller is rearranged to pull bearings toward the center of block. Ensure all lubrication passages of bearing are aligned with cylinder block. Coat new camshaft rear plug with sealant. Install camshaft rear plug. Ensure plug is even in cylinder block.

CAMSHAFT INSTALLATION

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Lubricate bearing surfaces and cam lobes with ample amount of Molykote or camshaft lubricant. Carefully install camshaft. Use care not to damage bearing journals during installation. Install thrust plate retaining bolts (if equipped). Tighten bolts to specification. On overhead camshafts, install bearing caps in original location. Tighten bolts to specification. On all applications, check camshaft end play.

CAMSHAFT END PLAY

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Using dial indicator, check camshaft end play. Position dial indicator on front of engine block or cylinder head. Position indicator tip against camshaft. Push camshaft toward rear of cylinder head or engine and adjust indicator to zero.

Move camshaft forward and note reading. Camshaft end play must be within specification. End play may be adjusted by relocating gear, shimming thrust plate or replacing thrust plate depending on each manufacturer.

TIMING CHAINS & BELTS

GETtheMANUALS.org

*** PLEASE READ THIS FIRST ***

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

TIMING CHAINS

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Timing chains will stretch during operation. Limits are placed upon amount of stretch before replacement is required. Timing chain stretch will alter ignition timing and valve timing.

To check timing chain stretch, rotate crankshaft to eliminate slack from one side of timing chain. Mark reference point on cylinder block. Rotate crankshaft in opposite direction to eliminate slack from remaining side of timing chain. Force other side of chain outward and measure distance between reference point and timing chain. See **Fig. 23**. Replace timing chain and gears if not within specification.

GETtheMANUALS.org

Fig. 23: Measuring Timing Chain Stretch

Timing chains must be installed so timing marks on camshaft gear and crankshaft gear are aligned according to manufacturer. See **Fig. 24**.

GETtheMANUALS.org

Fig. 24: Typical Gear Timing Mark Alignment

TIMING BELTS

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Cogged tooth belts are commonly used on overhead cam engines. Inspect belt teeth for rounded corners or cracking. Replace belt if it is cracked, damaged, missing teeth or oil soaked.

Used timing belt must be installed in original direction of rotation. Inspect all sprocket teeth for wear. Replace all worn sprockets. Sprockets are marked for timing purposes. Engine is positioned so that crankshaft sprocket mark will be upward. Camshaft sprocket is aligned with reference mark on cylinder head or timing belt cover and then timing belt can be installed. See **Fig. 25**.

GETtheMANUALS.org

Fig. 25: Typical Camshaft Belt Sprocket Alignment

TENSION ADJUSTMENT

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

GETtheMANUALS.org

If guide rails are used with spring loaded tensioners, ensure at least half of original rail thickness remains. Spring loaded tensioner should be inspected for damage.

Ensure all timing marks are aligned. Adjust belt tension using manufacturer's recommendations. Belt tension may require checking using tension gauge. See **Fig. 26**.

Fig. 26: Adjusting Typical Timing Belt Tension

TIMING GEARS

*** PLEASE READ THIS FIRST ***

GETtheMANUALS.org

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

TIMING GEAR BACKLASH & RUNOUT

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

On engines where camshaft gear operates directly on crankshaft gear, gear backlash and runout must be checked. To check backlash, install dial indicator with tip resting on tooth of camshaft gear. Rotate camshaft gear as far as possible. Adjust indicator to zero. Rotate camshaft gear in opposite direction as far as possible and note reading.

To determine timing gear runout, mount dial indicator with tip resting on face edge of camshaft gear. Adjust indicator to zero. Rotate camshaft gear 360 degrees and note reading. If backlash or runout exceeds specification, replace camshaft and/or crankshaft gear.

REAR MAIN OIL SEAL INSTALLATION

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

One-Piece Type Seal

For one-piece type oil seal installation, coat block contact surface of seal with sealer if seal is not factory coated. Ensure seal surface is free of burrs. Lubricate seal lip with engine oil and press seal into place using proper oil seal installer. See **Fig. 27**.

GETtheMANUALS.org

Fig. 27: Installing Typical One-Piece Oil Seal

Rope Type Seal

For rope type rear main oil seal installation, press seal lightly into seat area. Using seal installer, fully seat seal in bearing cap or cylinder block.

Trim seal ends even with cylinder block parting surface. Some applications require sealer to be applied on main bearing cap before installing. See **Fig. 28**.

GETtheMANUALS.org

Fig. 28: Installing Typical Rope Seal

Split-Rubber Type Seal

Follow manufacturer's procedures when installing split-rubber type rear main oil seals. Installation procedures vary with manufacturer and engine type. See **Fig. 29**.

Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Mark oil pump gear location before removing. See **Fig. 32**. Remove gears from pump body. Inspect gears for pitting or damage. Inspect cover for grooving or wear. Measure gear diameter and length. Measure gear housing cavity depth and diameter. See **Fig. 33**. Replace worn or damaged components.

Pump cover wear is measured using a straightedge and feeler gauge. Replace pump or components if warpage or wear exceeds specification, or mating surface of pump cover is scratched or grooved.

BREAK-IN PROCEDURE

*** PLEASE READ THIS FIRST ***

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

ENGINE PRE-OILING

GETtheMANUALS.org

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Pre-oil engine prior to operation to prevent engine damage. Lightly oiled oil pump will cavitate unless oil pump cavities are filled with engine oil or petroleum jelly.

Engine pre-oiling can be done using pressure oiler (if available). Connect pressure oiler to cylinder block oil passage such as oil pressure sending unit. Operate pressure oiler long enough to ensure correct amount of oil has filled crankcase. Check oil level while pre-oiling.

If pressure oiler is not available, disconnect ignition system. Remove oil pressure sending unit and replace with oil pressure test gauge. Using starter motor, rotate engine starter until gauge shows normal oil pressure for several seconds. DO NOT crank engine for more than 30 seconds to avoid starter motor damage. Ensure oil pressure has reached the most distant point from the oil pump.

NOTE: **If new lifters or camshaft are installed, some manufacturers require that a crankcase conditioner be added to engine oil. The engine should be operated for specified amount of time to aid in lifter break-in procedure.**

INITIAL START-UP

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Start engine and operate engine at low speed while checking for coolant, fuel and oil leaks. Stop engine. Recheck coolant and oil level. Adjust if necessary.

CAMSHAFT

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

GETtheMANUALS.org

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Break-in procedure is required when new or reground camshaft has been installed. Operate and maintain engine speed between 1500-2500 RPM for approximately 30 minutes. Procedure may vary due to manufacturer's recommendations.

PISTON RINGS

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Piston rings require a break-in procedure to ensure seating of rings to cylinder walls. Serious damage may occur to rings if correct procedures are not followed.

Extremely high piston ring temperatures are obtained during break-in process. If rings are exposed to excessively high RPM or high cylinder pressures, ring damage can occur. Follow piston ring manufacturer's recommended break-in procedure.

FINAL ADJUSTMENTS

NOTE: **Examples used in this article are general in nature and do not necessarily relate to a specific engine or system. Illustrations and procedures have been chosen to guide mechanic through engine overhaul process. Descriptions of processes of cleaning, inspection, assembly and machine shop practice are included.**

Always refer to appropriate engine overhaul article, if available, in the ENGINES section for complete overhaul procedures and specifications for the vehicle being repaired.

Check or adjust ignition timing and dwell (if applicable). Adjust valves (if necessary). Adjust idle speed and mixture. Retighten cylinder heads (if required). If cylinder head or block is aluminum, retighten bolts when engine is cold. Follow the engine manufacturer's recommended break-in procedure and maintenance schedule for new engines.

NOTE: **Some manufacturers require that head bolts be retightened after specified amount of operation. This must be done to prevent head gasket failure.**

AUTOMATIC LIGHTING SENSOR REMOVAL AND INSTALLATION

REMOVAL

1. Automatic Lighting Sensor
    1. Using a flat-tip screwdriver wrapped with protective tape, carefully pry up the automatic lighting sensor (A).
    2. Disconnect the connector.

Fig. 1: Identifying Automatic Lighting Sensor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Automatic Lighting Sensor
    1. Connect the connector.
    2. Install the automatic lighting sensor (A).

GETtheMANUALS.org

EXTERIOR LIGHTS BULB REMOVAL AND INSTALLATION - FOG LIGHT

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Front Splash Shield As Needed
    1. Remove the bolts (A), then remove the clips (B) that secure the front inner fender and the front splash shield (C) to the body.
    2. From under the front bumper (D), remove the clips (E).
    3. From under the body, remove the clips (F), then pull out the front splash shield.

Fig. 3: Identifying Front Splash Shield, Front Bumper, Bolts And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Fog Light Bulb
    1. Disconnect the connector.
    2. Turn the bulb (A) 45 ° counterclockwise to remove it from the housing.

GETtheMANUALS.org

Fig. 4: Identifying Fog Light Bulb
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Fog Light Bulb
    1. Turn the bulb (A) 45 ° clockwise to install it to the housing.
    2. Connect the connectors.

Fig. 5: Identifying Fog Light Bulb
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Splash Shield (2.4L) As Needed
    1. Install the front splash shield (A), then install the bolts (B) and the clips (C, D). Make sure the clips snap into place securely. Exterior Lights Bulb Removal and Installation - Headlight Housing

FOG LIGHT ADJUSTMENT

REMOVAL

1. Vehicle Lift

GETtheMANUALS.org

1. Raise the vehicle on a lift, and make sure it is securely supported.

2. Front Splash Shield As Needed (Except Canada models)
    1. Remove the bolts (A), then remove the clips (B) that secure the front inner fender and the front splash shield (C) to the body.
    2. From under the front bumper (D), remove the clips (E).
    3. From under the body, remove the clips (F), then pull out the front splash shield.

Fig. 30: Identifying Front Splash Shield, Front Bumper, Bolts And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

ADJUSTMENT

1. Fog Light - Adjustment

    Before adjusting the fog light:

    - Park the vehicle on a level surface.
    - Make sure the tire pressures are correct.
    - The driver or someone who weighs the same should sit in the driver's seat.
    - Unload the vehicle.

NOTE: **The fog lights should aim down slightly. To check for proper adjustment.**

GETtheMANUALS.org

1. Park the vehicle in front of a wall or a screen (A).
2. Turn the fog lights on.

Fig. 31: Identifying Fog Light Adjusting Dimension
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Determine if the fog lights are aimed properly:
   - Measure the height of the fog lights (B).
   - On the screen or wall, mark the height of the fog lights with a line of tape (C).
   - Measure the distance between the tape mark and the top of the fog light beam (D).
   - If needed, adjust the fog lights to the specified height.

   For example, if the vehicle is parked 3 m (9.8 ft) from the screen, the top of the fog light beam should be 4.5 cm (1.77 in) below the tape mark.

Fig. 32: Identifying Between Tape Mark And Top Of Fog Light Beam
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Adjust the fog lights by turning the adjuster (A).

NOTE: Canada models: Access to the fog light adjuster from the vent of the

GETtheMANUALS.org

front bumper.

Except Canada models

HEADLIGHT ADJUSTMENT

ADJUSTMENT

1. Headlight - Adjustment

CAUTION: Headlights become very hot during use; do not touch them or any attaching hardware immediately after they have been turned off.

Before adjusting the headlights:

- Park the vehicle on a level surface.
- Make sure the tire pressures are correct.
- The driver or someone who weighs the same should sit in the driver's seat.
- Unload the vehicle.

1. Clean the outer lens so that you can see the center (A) of the headlights.

GETtheMANUALS.org

Fig. 58: Identifying Headlights Center Outer Lens
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Park the vehicle so that the center mark of the headlight (A) is 7.5 m (24.6 ft) away from a wall or a screen (B).

Fig. 59: Identifying Vehicle Parking Distance Dimension
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Measure the height of the headlight's center mark (A), then, on the wall or screen (B), mark the same height of the headlights with masking tape in a straight horizontal line (C).

GETtheMANUALS.org

Fig. 60: Measuring Height Of Headlight's Center Mark On Wall Or Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Turn on the low beam headlights.
5. To see if the headlights are adjusted properly, observe the beams of light projected on the wall or screen. The highest edge or "cut line" (A) of the headlights should be equal with the masking tape (B).

NOTE: **To help determine which headlight is out of adjustment, block one of the beams with a piece of cardboard or equivalent, and observe the other beam on the wall or screen. Repeat this for the other headlight.**

Fig. 61: Identifying Cut Line And Masking Tape

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. If necessary, open the hood and adjust the headlights by turning the adjuster.

Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

HEADLIGHT REMOVAL AND INSTALLATION

REMOVAL

1. Front Grille
    1. Apply protective tape (A) to the front grille lower trim (B).

Fig. 64: Removing Fog Light Clips And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the clips (C) and detach the hooks (D).
3. Insert a shop towel (A) between the front grille (B) and the front grille lower trim (C).

GETtheMANUALS.org

Fig. 65: Inserting Shop Towel Between Front Grille And Front Grille Lower Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Insert a flat-tip screwdriver (A) into the opening at the front grille (B), then turn the screwdriver to detach the clip (C).

NOTE: Repeat this procedure on the opposite side.

Fig. 66: Inserting Flat-Tip Screwdriver Into Opening At Front Grille
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the front grille (A).

GETtheMANUALS.org

Fig. 67: Removing Front Grille
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Wheel Arch Protector Front Side As Needed - Both Sides

NOTE: Repeat on the opposite side.

1. Remove the screws (A) and the clips (B) securing the front wheel arch protector (C).
2. Carefully pry out the clip portions of the wheel arch protector with the appropriate trim tool to detach the clips (D, E), then detach the wheel arch protector front side as needed.
3. Put a shop towel (F) in the opening between the front wheel arch protector and the front fender.

GETtheMANUALS.org

Fig. 68: Identifying Front Wheel Arch Protector, Screws And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 69: Putting Shop Towel In Opening Between Front Wheel Arch Protector And Front Fender
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Bumper
    1. Remove the screws (A), the bolts (B), and the clips (C) securing the front bumper (D).

GETtheMANUALS.org

Fig. 70: Identifying Front Bumper, Screws, And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Pull out the front bumper (A) from the side spacer (B). Repeat this step on the opposite side.

Fig. 71: Pulling Out Front Bumper From Side Spacer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Detach the clip (A). Repeat this step on the opposite side.

GETtheMANUALS.org

Fig. 72: Detaching Clip From Front Bumper
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. With the help of an assistant, pull out both sides of the front bumper (A) from the upper beam (B).

Fig. 73: Pulling Out Front Bumper From Upper Beam
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. With the help of an assistant, disconnect the connectors (A), then remove the front bumper (B).

GETtheMANUALS.org

Fig. 74: Identifying Front Bumper And Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Headlight Assembly
    1. Remove the headlight (A) with the corner upper beam (B) as an assembly.
    2. Remove the harness clips (C) from the headlight housing.
    3. Disconnect the connectors.

Fig. 75: Identifying Headlight, Corner Upper Beam And Harness Clips With Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Headlight
    1. Remove the bolt and release the pin (A) from the corner upper beam (B).

GETtheMANUALS.org

2. Release the pins (C) from the corner upper beam, then remove the corner upper beam from the headlight (D).

Fig. 76: Releasing Pin From Corner Upper Beam
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Headlight
    1. Install the corner upper beam (A) to the pin (B) of the headlight (C).
    2. Install the corner upper beam to the pin (D).
    3. Install the corner upper beam to the pin (E), then install the bolt.

GETtheMANUALS.org

Fig. 77: Identifying Corner Upper Beam, Headlight And Pins With Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Headlight Assembly
    1. Connect the connectors.
    2. Install the harness clips (A) to the headlight housing.
    3. Install the headlight (B) with the corner upper beam (C) as an assembly.

GETtheMANUALS.org

Fig. 78: Identifying Corner Upper Beam, Headlight And Harness Clips With Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Bumper
    1. With the help of an assistant, connect the connectors (A), then install the front bumper (B).

Fig. 79: Identifying Front Bumper And Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. With the help of an assistant, install both sides of the front bumper (A) to the upper beam (B).

GETtheMANUALS.org

Fig. 80: Installing Front Bumper To Upper Beam
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Push the front bumper (A) until the clip (B) snaps into place. Repeat this step on the opposite side.

Fig. 81: Pushing Front Bumper With Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the front bumper (A) to the side spacer (B). Repeat this step on the opposite side.

GETtheMANUALS.org

Fig. 82: Installing Front Bumper To Side Spacer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the screws (A), the bolts (B), and the clips (C) securing the front bumper (D).

Fig. 83: Identifying Front Bumper, Screws, Bolts And Clips With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Wheel Arch Protector Front Side As Needed - Both Sides
    1. Install the front wheel arch protector (A), then install the screws (B) and the clips (C). Make sure the clips (D, E) snap into place securely. Repeat this step on the opposite side.

GETtheMANUALS.org

Fig. 84: Identifying Front Wheel Arch Protector, Screws And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Front Grille
    1. Install the front grille (A) by pushing on the clip areas until the clips snap into place.
    2. Install the clips (B).

GETtheMANUALS.org

Fig. 85: Installing Front Grille With Clips

6. Headlight - Adjustment
    1. **Adjust the headlights** See **HEADLIGHT ADJUSTMENT** or **HEADLIGHT REMOVAL AND INSTALLATION**.

HIGH MOUNT BRAKE LIGHT REMOVAL AND INSTALLATION

REMOVAL

1. Tailgate Upper Trim Panel
    1. Carefully pry out the notch (A) in the tailgate upper trim (B) with the appropriate trim tool to detach the hooks (C) and the tabs (D) from the tailgate side trims (E), and pull back the tailgate upper trim panel by hand to detach the clips (F), then remove the tailgate upper trim panel.

GETtheMANUALS.org

Fig. 86: Identifying Tailgate Upper Trim, Notch, Hooks, Tabs, Tailgate Side Trims And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. High Mount Brake Light
    1. Remove the high mount brake light (A).
    2. Disconnect the connector.

Fig. 87: Identifying High Mount Brake Light With Nuts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. High Mount Brake Light
    1. Connect the connector.
    2. Install the high mount brake light (A).

GETtheMANUALS.org

Fig. 88: Identifying High Mount Brake Light With Nuts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Tailgate Upper Trim Panel
    1. Install the tailgate upper trim panel (A). Make sure the hooks (B), the tabs (C), and the clips (D) snap into place securely.

Fig. 89: Identifying Tailgate Upper Trim Panel, Hooks, Tabs And Clips

FRONT TURN SIGNAL LIGHT BULB	**Removal and Installation** See **EXTERIOR LIGHTS BULB REMOVAL AND INSTALLATION - FOG LIGHT**, **EXTERIOR LIGHTS BULB REMOVAL AND INSTALLATION - HEADLIGHT HOUSING** or **EXTERIOR LIGHTS BULB REMOVAL AND INSTALLATION - TAILLIGHT HOUSING**
HAZARD WARNING SWITCH	**REMOVAL, INSTALLATION, AND TEST**
MICU (Built into the under-dash fuse/relay box)	**INPUT TEST**
	REMOVAL AND INSTALLATION
REAR TURN SIGNAL LIGHT	**Removal and Installation** See **EXTERIOR LIGHTS BULB REMOVAL AND INSTALLATION - FOG LIGHT**, **EXTERIOR LIGHTS BULB REMOVAL AND INSTALLATION - HEADLIGHT HOUSING** or **EXTERIOR LIGHTS**

GETtheMANUALS.org

BULB	**BULB REMOVAL AND INSTALLATION - TAILLIGHT HOUSING**
TURN SIGNAL SWITCH (Built into the combination switch)	**REMOVAL, INSTALLATION, AND TEST**

AUTOMATIC LIGHTING/SUNLIGHT SENSOR INPUT TEST

NOTE:

- **Before testing, check for DTCs. If any DTCs are indicated, troubleshoot those DTCs first.**
- **Before testing, make sure the No. A29 (10 A) fuse in the under-hood fuse/relay box is OK.**

1. Turn the ignition switch to LOCK (0).
2. **DISCONNECT THE AUTOMATIC LIGHTING/SUNLIGHT SENSOR 7P CONNECTOR**.

Fig. 105: Identifying Automatic Lighting/Sunlight Sensor 7P Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Inspect the connector and socket terminals to be sure they are all making good contact:
   - If the terminals are bent, loose, or corroded, repair them as necessary, and recheck the system.
   - If the terminals are OK, go to step **4** .
4. With the connector still disconnected, do the following input tests:
   - If any test indicates a problem, find and correct the cause, then recheck the system.
   - If all the input tests prove OK, go to step **5** .

Cavity	Wire	Test condition	Test: Desired result	Possible cause if desired result is not obtained
5	WHT	Disconnect under-dash fuse/relay box connector T (20P)	Check for continuity between terminal No. 5 and under-dash fuse/relay box connector T (20P) terminal No. 2: There should be continuity.	An open or high resistance in the wire

GETtheMANUALS.org

5. Reconnect the connector to the automatic lighting/sunlight sensor, do the following input tests:
   - If any test indicates a problem, find and correct the cause, then recheck the system.
   - If all the input tests prove OK, **REPLACE THE AUTOMATIC LIGHTING/SUNLIGHT SENSOR**.

Cavity	Wire	Test condition	Test: Desired result	Possible cause if desired result is not obtained
1	RED	Under all conditions	Measure the voltage to ground: There should be battery voltage.	• Blown No. A29 (10 A) fuse in the under-hood fuse/relay box • Faulty under-dash fuse/relay box • An open or high resistance in the wire
4	BLK	In all ignition switch positions	Measure the voltage to ground: There should be less than 0.2 V.	• Poor ground (G502) • An open or high resistance in the ground wire

COWL COVER REMOVAL AND INSTALLATION

REMOVAL

1. Both Windshield Wiper Arm Assemblies

NOTE: **Set the wiper arms to the auto-stop position before removal.**

1. Remove the caps (A) and nuts (B).
2. Remove the wiper arms (C).

GETtheMANUALS.org

Fig. 3: Identifying Wiper Arms With Caps And Nuts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Fender Trim - Both Sides

NOTE: Repeat on the opposite side.

1. Remove the clips (A, B).
2. Pull up the front fender trim (C) by hand to detach the clips (D), then remove the trim.

Fig. 4: Identifying Front Fender Trim And Clips

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Cowl Top Cover - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Remove the clip (A).
2. Pull out the hood rear seal (B).
3. Detach the hooks, and remove the cowl top cover (C).

Fig. 5: Identifying Hood Rear Seal, Cowl Top Cover And Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Side Cowl Cover - Both Sides

NOTE: Repeat on the opposite side.

1. Detach the hook (A) at the inside of the cowl cover (B).
2. Release the hooks (C) from the cowl cover and the front fender (D), then remove the side cowl cover (E).
3. Right side; Detach the windshield washer tube.

GETtheMANUALS.org

Fig. 6: Releasing Hooks From Cowl Cover And Front Fender
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Center Cowl Cover
    1. Remove the clips (A).
    2. Carefully pull the center cowl cover (B) forward to release the hooks (C) from the windshield and the body.

GETtheMANUALS.org

Fig. 7: Identifying Center Cowl Cover, Hooks And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Under-Cowl Panel
    1. Disconnect the connector (A).
    2. Remove the bolts and the nuts, then remove the under-cowl panel (B).
    3. Remove the wire harness (C) from the under-cowl panel.

GETtheMANUALS.org

Fig. 8: Identifying Wire Harness, Under-Cowl Panel And Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Under-Cowl Panel
    1. Install the under-cowl panel (A), then install the bolts and the nuts.
    2. Install the wire harness (B) to the under-cowl panel.
    3. Connect the connector (C).

Fig. 9: Identifying Wire Harness, Under-Cowl Panel And Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Center Cowl Cover
    1. Install the center cowl cover (A). Make sure the clips (B) and the hooks (C) snap into place securely.

GETtheMANUALS.org

Fig. 10: Identifying Center Cowl Cover, Hooks And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Side Cowl Cover - Both Sides

NOTE: Repeat on the opposite side.

1. Install the side cowl cover (A). Make sure the hooks (B) snap into place securely.
2. Right side; Install the windshield washer tube.

GETtheMANUALS.org

Fig. 11: Identifying Side Cowl Cover And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Cowl Top Cover - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Install the cowl top cover (A).
2. Install the hood rear seal (B).
3. Install the clip (C).

GETtheMANUALS.org

Fig. 12: Identifying Hood Rear Seal, Cowl Top Cover And Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Front Fender Trim - Both Sides

NOTE: Repeat on the opposite side.

1. Install the front fender trim (A), then install the clips (B, C). Make sure the clips (D) snap into place securely.

GETtheMANUALS.org

Fig. 13: Identifying Front Fender Trim And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Both Windshield Wiper Arm Assemblies

NOTE: Set the wiper arms to the auto-stop position before installation.

1. Install the wiper arms (A), the nut (B), and the caps (C).

Fig. 14: Identifying Wiper Arms, Nut And Caps With Torque Specification

GETtheMANUALS.org

7. Windshield Wiper Arm - Adjustment
    1. **Adjust the windshield wiper arms** See **WIPER ARM REMOVAL AND INSTALLATION** or **WIPER ARM/NOZZLE ADJUSTMENT** .

EMBLEM/STICKER REMOVAL AND INSTALLATION

REMOVAL

1. Front Emblem
    1. To remove the front "H" emblem, remove the front grille.

Fig. 15: Identifying Front "H" Emblem, Front Grille And Front Grill Base
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the front emblems.
2. Rear Emblem/Sticker
    1. To remove the rear "H" emblem, remove the rear license trim.

GETtheMANUALS.org

Fig. 16: Identifying Rear Emblem And Sticker
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the rear emblem/sticker.

INSTALLATION

1. Rear Emblem/Sticker
    1. Clean the body surface with a shop towel dampened with isopropyl alcohol. After cleaning, keep oil, grease, and water from getting on the surface.

GETtheMANUALS.org

Fig. 17: Identifying Rear Emblem And Sticker Installation Dimension
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the rear emblem/sticker.
3. After installing the rear "H" emblem, install the rear license trim.

2. Front Emblem
   1. Clean the body surface with a shop towel dampened with isopropyl alcohol. After cleaning, keep oil, grease, and water from getting on the surface.

GETtheMANUALS.org

Fig. 18: Identifying Front "H" Emblem, Front Grille And Front Grill Base
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the front emblems.
3. After installing the front "H" emblem, install the front grille.

FRONT BUMPER DISASSEMBLY AND REASSEMBLY

DISASSEMBLY

1. Front Grille Lower Trim
    1. Remove the clips (A) and the screws (B) securing the front grille lower trim (C).
    2. Detach the hooks (D), then remove the front grille lower trim.

GETtheMANUALS.org

Fig. 19: Identifying Front Grille Lower Trim, Hooks, Clips And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Fog Light Bracket (With Fog Light) - Both Sides
    1. Remove the screws (A) and the clip (B), then remove the fog light bracket (C). Repeat this step on the opposite side.

GETtheMANUALS.org

Fig. 20: Identifying Fog Light Bracket, Screws And Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Bumper Face
    1. Remove the clips (A) and detach the hooks (B), then separate the front bumper upper face (C) and the front bumper lower face (D).

Fig. 21: Identifying Clips, Hooks, Front Bumper Upper Face And Lower Face

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

REASSEMBLY

1. Front Bumper Face
    1. Reassemble the front bumper upper face (A) and the front bumper lower face (B), then install the clips (C). Make sure the clips and the hooks (D) snap into place securely.

Fig. 22: Identifying Clips, Hooks, Front Bumper Upper Face And Lower Face
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Fog Light Bracket (With Fog Light) - Both Sides

NOTE: Repeat on the opposite side.

1. Install the fog light bracket (A).
2. Install the screws (B) and the clip (C).

GETtheMANUALS.org

Fig. 23: Identifying Fog Light Bracket, Screws And Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Grille Lower Trim
    1. Install the front grille lower trim (A), then install the clips (B) and the screws (C). Make sure the clips and the hooks (D) snap into place securely.

GETtheMANUALS.org

Fig. 24: Identifying Front Grille Lower Trim, Hooks, Clips And Screws

FRONT BUMPER REMOVAL AND INSTALLATION

REMOVAL

1. Front Grille
    1. Apply protective tape (A) to the front grille lower trim (B).

GETtheMANUALS.org

Fig. 25: Applying Protective Tape To Front Grille Lower Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the clips (C) and detach the hooks (D).
3. Insert a shop towel (A) between the front grille (B) and the front grille lower trim (C).

GETtheMANUALS.org

Fig. 26: Inserting Shop Towel Between Front Grille And Front Grille Lower Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Insert a flat-tip screwdriver (A) into the opening at the front grille (B), then turn the screwdriver to detach the clip (C).

NOTE: Repeat this procedure on the opposite side.

Fig. 27: Inserting Flat-Tip Screwdriver Into Opening At Front Grille
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

5. Remove the front grille (A).

Fig. 28: Removing Front Grille
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Wheel Arch Protector Front Side As Needed - Both Sides

NOTE: Repeat on the opposite side.

1. Remove the screws (A) and the clips (B) securing the front wheel arch protector (C).
2. Carefully pry out the clip portions of the wheel arch protector with the appropriate trim tool to detach the clips (D, E), then detach the wheel arch protector front side as needed.
3. Put a shop towel (F) in the opening between the front wheel arch protector and the front fender.

Courtesy of AMERICAN HONDA MOTOR CO., INC.

FRONT FENDER FAIRING REMOVAL AND INSTALLATION

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Front Wheel
    1. Remove the front wheel.

GETtheMANUALS.org

Fig. 43: Identifying Front Wheel With Studs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Splash Guard
    1. For some models: Remove the screws (A), then remove the front splash guard (B).

Fig. 44: Identifying Front Splash Guard And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Inner Fender As Needed
    1. Remove the bolt (A), the screws (B), and the clips (C, D, and E) securing the front inner fender (F), then detach the front inner fender as needed.

GETtheMANUALS.org

Fig. 45: Identifying Front Inner Fender, Bolt, Screws And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Front Fender Fairing
    1. From the wheel arch, detach the clips (A).

GETtheMANUALS.org

Fig. 46: Identifying Front Fender Fairing Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Release the hooks (A) securing the front fender fairing (B).

Fig. 47: Releasing Hooks And Securing Front Fender Fairing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the front fender fairing (A).

GETtheMANUALS.org

Fig. 48: Removing Front Fender Fairing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Front Fender Fairing
    1. Place the front fender fairing (A) as shown.

Fig. 49: Placing Front Fender Fairing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Install the hooks (A) of the front fender fairing (B) to the body holes as shown.

GETtheMANUALS.org

Fig. 50: Installing Hooks Of Front Fender Fairing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. From the wheel arch, install the clips (A).

Fig. 51: Identifying Front Fender Fairing Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Inner Fender As Needed
    1. Install the front inner fender (A), then install the bolt (B), the screws (C), and the clips (D, E, and F). Make sure the clips snap into place securely.

GETtheMANUALS.org

FRONT FLOOR UNDERCOVER REMOVAL AND INSTALLATION

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Front Floor Undercover
    1. Remove the bolts (A) and the clips (B, C) securing the front floor undercover (D), then remove the front floor undercover.

Fig. 55: Identifying Front Floor Undercover, Bolts And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Front Floor Undercover
    1. Install the front floor undercover (A), then install the bolts (B) and the clips (C, D). Make sure the clips snap into place securely.

GETtheMANUALS.org

Fig. 56: Identifying Front Floor Undercover, Bolts And Clips With Torque Specification

FRONT GRILLE REMOVAL AND INSTALLATION

REMOVAL

1. Front Grille
    1. Apply protective tape (A) to the front grille lower trim (B).

GETtheMANUALS.org

Fig. 57: Applying Protective Tape To Front Grille Lower Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the clips (C) and detach the hooks (D).
3. Insert a shop towel (A) between the front grille (B) and the front grille lower trim (C).

GETtheMANUALS.org

Fig. 58: Inserting Shop Towel Between Front Grille And Front Grille Lower Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Insert a flat-tip screwdriver (A) into the opening at the front grille (B), then turn the screwdriver to detach the clip (C).

NOTE: Repeat this procedure on the opposite side.

Fig. 59: Inserting Flat-Tip Screwdriver Into Opening At Front Grille
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the front grille (A).

GETtheMANUALS.org

Fig. 60: Removing Front Grille

LICENSE PLATE LIGHT REMOVAL AND INSTALLATION

REMOVAL

1. License Plate Light Assembly
    1. Push the license plate light assembly (A) to the side to release the retaining spring, and pull out the license plate light assembly.

Fig. 82: Pushing License Plate Light Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Disconnect the connector and remove the license plate light assembly.

GETtheMANUALS.org

3. Separate the lens (A) from the housing (B), then remove the bulb.

Fig. 83: Identifying Lens And Housing (License Plate Light - 3CP)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. License Plate Light Assembly
    1. Set the lens (A) into the housing (B).
    2. Connect the connector.

GETtheMANUALS.org

Fig. 84: Identifying Lens And Housing (License Plate Light - 5 W)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Insert the hook (A), then lightly push the license plate light assembly (B) and install it.

Fig. 85: Identifying License Plate Light Assembly And Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

MIDDLE FLOOR UNDERCOVER REMOVAL AND INSTALLATION

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Middle Floor Undercover
    1. Remove the bolts (A) and the clips (B, C), then remove the left middle floor undercover (D) or the right middle floor undercover (E).

    Left side

Right side

Fig. 127: Identifying Rear Splash Guard, Screws And Clip (Right Side)

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Wheel
    1. Install the rear wheel.

NOTE: **Before installing the wheel, clean the mating surfaces between the brake disc/drum and the inside of the wheel.**

Fig. 128: Identifying Rear Wheel And Studs With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR LICENSE TRIM REMOVAL AND INSTALLATION

REMOVAL

1. Rear License Trim
    1. Remove the bolts (A).

GETtheMANUALS.org

Fig. 129: Identifying Rear License Trim Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Spray soapy water solution onto the double-sided adhesive tape (A), then carefully cut the adhesive tape along the lower edge of the rear license trim (B) with a utility knife while separating the trim from the tailgate (C) with a trim tool.

NOTE: Apply protective tape (D) around the cutting area as shown.

Fig. 130: Applying Protective Tape Around Cutting Area
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Pull out the rear license trim (A) with the appropriate trim tool to release the clip pins (B) of the clips (C) from the clip grommets (D) on the tailgate, and detach the clips (E), then remove the rear license trim from the tailgate.

GETtheMANUALS.org

NOTE: **The clip grommets will stay on the tailgate.**

Fig. 131: Identifying Rear License Trim, Clip Pins, Clip Grommets And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the clip grommets (A) from the tailgate.
5. Install the clip grommets into the clip pins on the rear license trim.

NOTE: **If the clip pins and the clip grommets are damaged or stress-whitened, replace them as an assembly with new ones.**

GETtheMANUALS.org

Fig. 132: Identifying Clip Grommets
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Rear License Trim
    1. If you are reusing the original rear license trim (A), apply PP primer to the areas where new double-sided adhesive tapes (B, C) will be applied, then attach the new double-sided adhesive tapes to the trim as shown.

       Adhesive tape (B): Thickness 3 mm (0.12 in)

       Width 4 mm (0.16 in)

       Length 255 mm (10.04 in)

       Adhesive tape (C): Thickness 2 mm (0.08 in)

       Width 5 mm (0.20 in)

       Length 177 mm (6.97 in)

Fig. 133: Identifying Adhesive Tape Applying Area On Rear License Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Fold the edge of each adhesive backing from the double-sided adhesive tape.
    3. Hold up the rear license trim (A), and fit the clips (B, C) into the holes in the tailgate. Push on the trim until the clips snap into place securely.

GETtheMANUALS.org

Fig. 134: Identifying Rear License Trim And Clips

4. Side Cowl Cover
    1. Detach the hook (A) at the inside of the cowl cover (B).
    2. Release the hooks (C) from the cowl cover and the front fender (D), then remove the side cowl cover (E).
    3. Right side: Detach the windshield washer tube.

GETtheMANUALS.org

Fig. 149: Releasing Hooks From Cowl Cover And Front Fender
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Roof Molding
    1. Carefully insert the trim tool (A) under the molding next to lower clip (B).
    2. While pulling up the clip area of the molding by hand of the six small hooks (C) to release the clip from the on the A-pillar. Do not pry up the clip if it is hard to release it from the clip on the A-pillar.
    3. Gradually work your way up to release each of the upper F, G).

GETtheMANUALS.org

Fig. 150: Inserting Trim Tool Under Molding To Lower Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Start from the front to the rear; carefully insert a trim under the roof molding (A) next to each of the retainers (B, C). Slide and pry up the retainers to release it with the clips from the stud bolts (D) and the pins (E) on the body.

GETtheMANUALS.org

Fig. 151: Inserting Trim Under Roof Molding To Retainers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Slide the rear end of the roof molding (A) forward to release it from the body, then remove the roof molding from the body

GETtheMANUALS.org

Fig. 152: Sliding Rear End Of Roof Molding
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Pry up the middle hooks (A) with a flat-tip screw driver to release the retainer (B) from the roof molding (C).

Fig. 153: Prying Up Middle Hooks With Flat-Tip Screw Driver
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. If necessary, remove the retainers (A, B) from the A-pillar
8. Carefully rub off the adhesive tape (C) under the retainers heating it with a heat gun.
9. Clean the body bonding surface with a shop towel dampened isopropyl alcohol. After cleaning, keep oil, grease, and water from getting on the clean surface.

GETtheMANUALS.org

Fig. 154: Removing Adhesive Tape Under Retainers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Roof Molding
    1. Install the retainers (A, B) on the A-pillar.
    2. Peel the adhesive backing away from the upper retainers and the lower retainer.
    3. Line up the retainers with the alignment marks (C) on and attach the retainers with adhesive tape (D).
    4. Apply epoxy two-part adhesive (E) around the edge of the retainers as shown.

GETtheMANUALS.org

Fig. 155: Identifying Epoxy Two-Part Adhesive Applying Area Around Edge Of Retainers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the retainers (A) to the pins (B) on the body. (4 places)

Fig. 156: Installing Retainers To Pins
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Slide the rear end of the roof molding (A) rearward to the body.

GETtheMANUALS.org

Fig. 157: Sliding Rear End Of Roof Molding
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Push on the clip areas (A) of the roof molding (B) until the lock into the retainers (C) securely, and the retainers (D lock onto the stud bolts (E).
8. Make sure the roof molding is installed securely.

GETtheMANUALS.org

Fig. 158: Pushing Clip Areas Of Roof Molding Until Lock Into Retainers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Side Cowl Cover
    1. Install the side cowl cover (A). Make sure the hooks (B) snap into place securely.
    2. Right side: Install the windshield washer tube.

GETtheMANUALS.org

Fig. 159: Identifying Side Cowl Cover And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Left Cowl Top Cover
    1. Install the cowl top cover (A).
    2. Install the hood rear seal (B).
    3. Install the clip (C).

GETtheMANUALS.org

Fig. 160: Identifying Cowl Top Cover, Hood Rear Seal And Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Fender Trim
    1. Install the front fender trim (A), then install the clips (Make sure the clips (D) snap into place securely.

GETtheMANUALS.org

Fig. 161: Identifying Front Fender Trim And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Left Windshield Wiper Arm Assembly

NOTE: Set the wiper arms to the auto-stop position before installation.

1. Install the wiper arm (A), the nut (B), and the cap (C).

GETtheMANUALS.org

Fig. 162: Identifying Wiper Arm, Nut And Cap With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Windshield Wiper Arm - Adjustment
    1. **Adjust the windshield wiper arms** See **WIPER ARM REMOVAL AND INSTALLATION** or **WIPER ARM/NOZZLE ADJUSTMENT** .

ROOF RAIL REMOVAL AND INSTALLATION

REMOVAL

1. Roof Rail
    1. Remove the caps (A). (4 Places)

Fig. 163: Identifying Roof Rail Caps
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the roof rail (A).

GETtheMANUALS.org

Fig. 164: Identifying Roof Rail With Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. If necessary, slide the rear roof side trim (A) forward to release it from the body.

Fig. 165: Sliding Rear Roof Side Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Roof Rail
    1. Slide the rear roof side trim (A) rearward to install it to the body.

GETtheMANUALS.org

Fig. 166: Sliding Rear Roof Side Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the roof rail (A), then install the nuts (B).

Fig. 167: Identifying Roof Rail, Nuts And Fasteners With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the caps (A). (4 Places)

SUBFRAME	**REMOVAL AND INSTALLATION**

SUBFRAME REMOVAL AND INSTALLATION

SPECIAL TOOL DESCRIPTION

Image	Description/Tool Number

GETtheMANUALS.org

	Subframe Alignment Pin 070AG-SJAA10S

REPLACEMENT

1. Front Subframe - Torque

NOTE: **After removing the subframe mounting bolts, be sure to replace them with new ones.**

Fig. 2: Identifying Front Subframe Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Rear Subframe - Toque

GETtheMANUALS.org

NOTE: **After removing the subframe mounting bolts, be sure to replace them with new ones.**

Fig. 3: Identifying Rear Subframe Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Subframe - Alignment

NOTE:

- **Align the front subframe in the following sequence.**
- **When Installing, align both installation reference holes in the subframe with both reference holes in the body using the subframe alignment pin as a guide.**

1. Lift the front subframe (A) up to the body, and loosely install new subframe mounting bolts (B, C).

GETtheMANUALS.org

Fig. 4: Identifying Front Subframe And Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Loosely install new mid mounting bolts (D).
3. Insert the subframe alignment pin (E) through the positioning hole (F) on the right rear subframe, and into the positioning hole (G) on the body, then loosely tighten the subframe right rear mounting bolt.
4. Insert the subframe alignment pin through the positioning hole on the left rear subframe, and into the positioning hole on the body, then loosely tighten the subframe left rear mounting bolt.
5. Tighten the subframe mounting bolts to the specified torque values starting with the right rear subframe mounting bolt. Use the subframe alignment pin when tightening the rear side subframe mounting bolts.
6. Check all of the subframe mounting bolts, and retighten if necessary.

NOTE: Tighten the bolts in the sequence shown.

7. Tighten the mid mounting bolts to the specified torque.
8. After reinstalling all remaining parts, check and adjust the front wheel alignment.

GETtheMANUALS.org

BALL JOINT BOOT INSPECTION

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Front Wheel
    1. Remove the front wheel.

Fig. 1: Identifying Front Wheel And Studs

INSPECTION

1. Ball Joint Boot - Inspection
    1. Check the ball joint boot (A) for weakness, damage, cracks, and grease leaks.

NOTE:

- **If the ball joint boot is damaged with grease leaks, replace the appropriate part as an assembly.**
- **If the ball joint boot is soft and cracked without grease leaks, replace the appropriate ball joint boot.**

GETtheMANUALS.org

Fig. 2: Identifying Ball Joint Boot

INSTALLATION

1. Front Wheel
    1. Install the front wheel.

NOTE: **Before installing the wheel, clean the mating surfaces between the brake disc and the inside of the wheel.**

Fig. 3: Identifying Front Wheel And Studs With Torque Specification

BALL JOINT BOOT REPLACEMENT

SPECIAL TOOL REQUIRED

GETtheMANUALS.org

Image	Description/Tool Number
	Ball Joint Remover, 32 mm 07MAC-SL00102
	Ball Joint Thread Protector, 14 mm 071AF-SZNA100

GETtheMANUALS.org

	Bearing Driver Attachment, 40 mm 07GAF-SE00200

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Front Wheel
    1. Remove the front wheel.

GETtheMANUALS.org

Fig. 4: Identifying Front Wheel And Studs

3. Ball Joint - Removal

NOTE: **Always use a ball joint remover to disconnect a ball joint. Do not strike the housing or any other part of the ball joint connection to disconnect it.**

1. Install a hex nut (A) or the ball joint thread protector.

NOTE: **When using a hex nut, make sure the nut is flush with the ball joint pin end to prevent damage to the threaded end of the ball joint pin.**

Fig. 5: Identifying Hex Nut And Ball Joint Thread Protector

2. Apply grease to the ball joint remover on the areas shown (A).

GETtheMANUALS.org

Fig. 6: Identifying Grease Applying Area On Ball Joint Remover

3. Install the ball joint remover as shown.

NOTE:

- **Fasten the safety tie (A) securely to a suspension arm or the subframe (B).**
- **Making sure not to damage the ball joint boot.**

4. Tighten the pressure bolt until the ball joint pin pops loose from the ball joint connecting hole.

NOTE: **Do not use pneumatic or electric tools on the pressure bolt.**

5. Remove the ball joint remover.
6. Remove the hex nut or the ball joint thread protector.
7. Pull the ball joint out of the ball joint connecting hole.

GETtheMANUALS.org

Fig. 7: Fastening Safety Tie Securely To Suspension Arm Or Subframe

4. Front Lower Ball Joint knuckle side - Disconnection
    1. Remove the lock pin (A).
    2. Remove the castle nut (B).
    3. Disconnect the lower ball joint (C) from the knuckle.

Fig. 8: Disconnecting Lower Ball Joint From Knuckle

5. Front Lower Ball Joint
    1. Remove the flange bolt (A).
    2. Remove the flange nuts (B).
    3. Remove the front lower ball joint (C).

GETtheMANUALS.org

Fig. 9: Identifying Front Lower Ball Joint, Flange Nuts And Flange Bolt

6. Ball Joint Boot
    1. Remove the boot (A).

Fig. 10: Identifying Ball Joint Boot

INSTALLATION

1. Ball Joint Boot
    1. Pack the interior and lip (A) of a new boot with grease.

NOTE:

- **Keep the grease off of the boot-to-lower ball joint housing mating surfaces (B).**
- **Use the grease that comes with the ball joint kit, or multipurpose grease.**

GETtheMANUALS.org

- **Do not let dirt or other foreign materials get into the boot.**

Fig. 11: Identifying Grease Applying Area On Boot-To-Lower Ball Joint Housing Mating Surfaces

2. Pack fresh grease into the base (C).
3. Install the boot.
4. Squeeze it gently to force out any air.
5. Wipe the grease off the tapered portion of the ball joint pin (D).
6. Press the boot.
7. Wipe any grease off the exposed portion of the ball joint pin.

Fig. 12: Pressing Boot

2. Front Lower Ball Joint
    1. Install the lower ball joint (A) to the lower arm.

GETtheMANUALS.org

2. Install the new flange nuts and the new flange bolt in the sequence shown.

Fig. 13: Identifying Lower Ball Joint, Flange Nuts And Bolt Tightening Sequence With Torque Specification

3. Front Lower Ball Joint knuckle side - Reconnection
    1. Connect the lower ball joint (A) to the knuckle.
    2. Install the new castle nut (B).

NOTE: **Torque the castle nut to the lower torque specification, then tighten it only far enough to align the slot with the ball joint pin hole. Do not align the castle nut by loosening it.**

    3. Install the lock pin (C) as shown.

GETtheMANUALS.org

Fig. 14: Identifying Lock Pin, Lower Ball Joint And Castle Nut With Torque Specification

4. Front Wheel
    1. Install the front wheel.

NOTE: **Before installing the wheel, clean the mating surfaces between the brake disc and the inside of the wheel.**

Fig. 15: Identifying Front Wheel And Studs With Torque Specification

COMPLIANCE BUSHING REPLACEMENT

GETtheMANUALS.org

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Front Wheel
    1. Remove the front wheel.

Fig. 16: Identifying Front Wheel And Studs

3. Front Stabilizer Bar Bushing Holder
    1. Remove the front stabilizer bar bushing holder (A).

Fig. 17: Identifying Front Stabilizer Bar Bushing Holder

4. Lower Ball Joint Lower Arm Side - Disconnection
    1. Remove the flange bolt (A).

GETtheMANUALS.org

2. Remove the flange nuts (B).
3. Disconnect the lower arm (C) from the front lower ball joint (D).

Fig. 18: Identifying Lower Arm, Front Lower Ball Joint, Flange Nuts And Flange Bolt

5. Front Lower Arm
    1. Remove the lower arm (A).
    2. Remove the bushing stopper bracket (B) from the lower arm.

GETtheMANUALS.org

Fig. 19: Identifying Bushing Stopper Bracket, Lower Arm And Mounting Bolts With Torque Specification

6. Front Lower Arm Bushing
    1. Support the lower arm (A) on suitable bar (B) as shown.
    2. Press out the lower arm with a suitable socket and a hydraulic press, and remove the lower arm from the bushing (C).

NOTE: **Be careful not to damage the inside of the bushing hole when pressing on the bushing.**

Fig. 20: Pressing Out Lower Arm With Suitable Socket And Hydraulic Press

INSTALLATION

1. Front Lower Arm Bushing
    1. Clean the mating surfaces of the new bushing and the lower arm.
    2. Apply a mild soap and water to the bushing surface.
    3. Align the angle of the lower arm (A) and the tab portion (B) of the bushing (C). Press in the bushing by hand first.

NOTE:

- **The installed bushing's tab portion points upward and downward to the installed lower arm.**
- **Make sure the up/down direction of the bushing.**

GETtheMANUALS.org

Fig. 21: Aligning Angle Of Lower Arm And Tab Portion Of Bushing

4. Support the lower arm (A) on suitable square lumber (B) as shown.
5. Press in the bushing (C) with a suitable socket (D) and a hydraulic press.
6. Adjust the distance between the top of the lower arm (E), and the bushing surface to the dimension shown.

Fig. 22: Adjusting Distance Between Top Of Lower Arm And Bushing Surface

GETtheMANUALS.org

2. Front Lower Arm
    1. Install the bushing stopper bracket (A) on the lower arm (B).
    2. Install the lower arm.
    3. Loosely install the new flange bolts (C).

Fig. 23: Identifying Bushing Stopper Bracket, Lower Arm And Flange Bolts With Torque Specification

3. Front Lower Ball Joint Lower Arm Side - Reconnection
    1. Connect the front lower ball joint (A) to the lower arm.
    2. Install the new flange nuts and the new flange bolt in the sequence shown.

GETtheMANUALS.org

Fig. 24: Identifying Lower Ball Joint, Flange Nuts And Bolt Tightening Sequence With Torque Specification

4. Front Lower Arm - Tighten Vehicle's Weight
    1. Raise the front suspension with a floor jack to load the suspension with the vehicle's weight.
    2. Tighten the flange bolts to the specified torque.
5. Front Stabilizer Bar Bushing Holder
    1. Install the front stabilizer bar bushing holder (A).

Fig. 25: Identifying Front Stabilizer Bar Bushing Holder And Mounting Bolts With Torque Specification

GETtheMANUALS.org

6. Front Wheel
    1. Install the front wheel.

NOTE: **Before installing the wheel, clean the mating surfaces between the brake disc and the inside of the wheel.**

Fig. 26: Identifying Front Wheel And Studs With Torque Specification

7. Pre-Alignment Checks

    For proper inspection and adjustment of the wheel alignment, do these checks:

    1. Release the parking brake to avoid an incorrect measurement.
    2. Make sure the suspension is not modified.
    3. Make sure the fuel tank is full, and that the spare tire, the jack, and the tools are in place on the vehicle.
    4. Check the tire size and tire pressure according to tire information.
    5. Set the steering column to the middle tilt position and telescopic position.
8. Caster - Inspection

    Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

    1. Check the caster angle.

        Caster angle:

GETtheMANUALS.org

2WD:

With 16 inch wheel: 2 ° 44 '±30 '

Without 16 inch wheel: 2 ° 50 '±30 '

AWD/4WD:

With 16 inch wheel: 2 ° 38 '±30 '

Without 16 inch wheel: 2 ° 44 '±30 '

- If the measurement is within specifications, measure the front camber angle.
- If the measurement is not within specifications, check for bent or damaged suspension components.

9. Camber - Inspection

Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

1. Check the camber angle.

Camber angle:

2WD:

Front:

With 16 inch wheel: -0 ° 01 '±1 ° 00 '

Without 16 inch wheel: -0 ° 10 '±1 ° 00 '

(Maximum difference between the front right and left side: 1 °00 ')

Rear:

With 16 inch wheel: -1 ° 06 '±45 '

Without 16 inch wheel: -1 ° 12 '±45 '

(Maximum difference between the front right and left side: 0 °45 ')

AWD/4WD:

Front:

With 16 inch wheel: -0 ° 08 '±1 ° 00 '

GETtheMANUALS.org

Without 16 inch wheel: 0 ° 00 '±1 ° 00 '

(Maximum difference between the front right and left side: 1 °00 ')

Rear:

With 16 inch wheel: -0 ° 50 '±45 '

Without 16 inch wheel: -1 ° 00 '±45 '

(Maximum difference between the front right and left side: 0 °45 ')

- If the measurement is within specification, measure the toe-in.
- If the measurement for the front camber is not within the specification, go to front camber adjustment.
- If the measurement for the rear camber is not within the specification, check for bent or damaged suspension components.

10. Front Toe - Inspection

Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

1. Set the steering column to the middle tilt position and telescopic positions.
2. Center the steering wheel spokes, and install a steering wheel holder tool.
3. Check the toe with the wheels pointed straight ahead.

Front toe-in: 0±2 mm (0±0.08 in)

- If adjustment is required, go to the front toe adjustment.
- If no adjustment is required, remove the alignment equipment.

11. Turning Angle - Inspection

Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

1. Turn the wheel right and left while applying the brake, and measure the turning angle of both wheels.

Turning angle:

2WD:

Inward:

With 16 inch wheel: 36 ° 29 '±2 °

GETtheMANUALS.org

Without 16 inch wheel: 36 ° 13 '±2 °

Outward (reference):

With 16 inch wheel: 31 ° 13 '

Without 16 inch wheel: 31 ° 02 '

AWD/4WD:

Inward:

With 16 inch wheel: 36 ° 48 '±2 °

Without 16 inch wheel: 36 ° 30 '±2 °

Outward (reference):

With 16 inch wheel: 31 ° 18 '

Without 16 inch wheel: 31 ° 12 '

2. If the measurement is not within the specifications, even up both sides of the tie-rod threaded section length while adjusting the front toe.
3. If it is correct, but the turning angle is not within the specifications, check for bent or damaged suspension components.

Fig. 27: Measuring Wheel Alignment (Caster, Camber, Toe And Turning Angle)

12. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.

GETtheMANUALS.org

2. Turn the ignition switch to ON (II).
3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 28: Identifying Data Link Connector (DLC) Located Under Driver's Side Of Dashboard

13. VSA Sensor Neutral Position - Memorization
    1. Park the vehicle on a flat and level surface, with the steering wheel in the straight ahead position.
    2. Select VSA ADJUSTMENT, then select ALL SENSORS with the HDS, and follow the screen prompts.

    NOTE: See the HDS Help menu for specific instructions.

14. Steering Angle Sensor Neutral Position - Clear
    1. Select EPS ADJUSTMENT, then select EPS STEERING ANGLE SENSOR VALUE CLEAR and follow the screen prompts on the HDS.

    NOTE: See the HDS Help menu for specific instructions.

FRONT DAMPER/SPRING DISASSEMBLY, REASSEMBLY, AND INSPECTION

SPECIAL TOOL REQUIRED

Image	Description/Tool Number
	Strut Nut Adapter 07AAA-SVAA100

EXPLODED VIEW

1. Front Damper/Spring Exploded View

   Exploded View

GETtheMANUALS.org

Fig. 31: Exploded View Of Front Damper/Spring

DISASSEMBLY

NOTE:

- **When compressing the damper spring, use a commercially available strut spring compressor (Branick MST-580A or Model 7200, or equivalent) according to the manufacturer's instructions.**
- **Refer to the EXPLODED VIEW as needed during the following procedure.**

GETtheMANUALS.org

1. Front Damper/Spring - Disassembly
    1. Remove the cap (A).

Fig. 32: Identifying Front Damper/Spring Cap

2. Compress the damper spring.

NOTE: Do not compress the spring more than necessary to remove the nut.

3. Remove the self-locking nut (A) while holding the damper shaft with a hex wrench (B).
4. Release the pressure from the strut spring compressor.
5. Disassemble the damper as shown in the Exploded View.

Fig. 33: Compressing Damper Spring

GETtheMANUALS.org

INSPECTION

1. Front Damper/Spring - Inspection
    1. Reassemble the damper mounting base and the self-locking nut.
    2. Compress the damper assembly by hand, and check for smooth operation through a full stroke, both compression and extension. The damper should extend smoothly and constantly when compression is released. If it does not, the gas is leaking and the damper should be replaced.
    3. Check for oil leaks, abnormal noises, or binding during these tests.

Fig. 34: Compressing Damper Assembly

REASSEMBLY

NOTE:

- **When compressing the damper spring, use a commercially available strut spring compressor (Branick MST-580A or Model 7200, or equivalent) according to the manufacturer's instructions.**
- **Refer to the EXPLODED VIEW as needed during the following procedure.**

1. Front Damper/Spring - Reassembly
    1. Install the dust cover (A) on the upper spring seat (B) by aligning the ledge portion (C).

GETtheMANUALS.org

Fig. 35: Identifying Dust Cover And Upper Spring Seat

2. Install the damper spring (A) on the upper spring mounting cushion (B), then align the upper end (C) of the damper spring with the cushion stop (D).

Fig. 36: Aligning Upper End Of Damper Spring With Cushion Stop

3. Install all the parts except the self-locking nut and the cap onto the damper unit (A) by referring to the **EXPLODED VIEW**.
4. Compress the damper spring.

NOTE: Do not compress the spring excessively.

Fig. 37: Compressing Damper Spring

5. Align the bottom of the damper spring (A) with the stepped part (B) of the lower spring seat.

GETtheMANUALS.org

Fig. 38: Identifying Damper Spring And Stepped Part Of Lower Spring Seat

6. Align the center of raised portion (A) on the upper spring seat and the damper unit.
7. Align the damper bracket (B) and the damper mounting base (C) so that "delta" stamp (D) on it is toward the outside of the vehicle.

Fig. 39: Aligning Center Of Raised Portion On Upper Spring Seat And Damper Unit

8. Install the new self-locking nut (A).
9. Hold the damper shaft using a hex wrench (B), and tighten the self-locking nut.
10. Remove the damper/spring from the strut spring compressor.

GETtheMANUALS.org

Fig. 40: Holding Damper Shaft Using Hex Wrench

11. Install the cap (A).

Fig. 41: Identifying Front Damper/Spring Cap

FRONT DAMPER/SPRING REMOVAL AND INSTALLATION

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Front Wheel
    1. Remove the front wheel.

GETtheMANUALS.org

Fig. 42: Identifying Front Wheel And Studs

3. Front Damper/Spring Items
    1. Remove the wheel speed sensor harness clips (A).
    2. Remove the brake hose bracket (B).

Fig. 43: Identifying Wheel Speed Sensor Harness Clips And Brake Hose Bracket

4. Front Stabilizer Ball Joint Damper Side - Disconnection
    1. Remove the flange nut (A) while holding the joint pin (B) with a hex wrench (C).
    2. Disconnect the stabilizer link (D) from the damper.

GETtheMANUALS.org

Fig. 44: Removing Flange Nut While Holding Joint Pin With Hex Wrench

5. Front Damper/Spring Lower Side - Disconnection
    1. Remove the damper pinch bolts (A) and flange nuts (B).

NOTE: **Do not allow the knuckle to rotate too far outward. This may allow the driveshaft inboard joint to come apart.**

Fig. 45: Identifying Damper Pinch Bolts And Flange Nuts

6. Front Damper/Spring
    1. Remove the clip (A).

GETtheMANUALS.org

2. Pull out the hood rear seal (B).
3. Detach the hooks, and remove the cowl top lid (C).
4. Remove the flange nuts (D).

Fig. 46: Identifying Hood Rear Seal, Cowl Top Lid, Clip And Flange Nuts

5. Remove the damper/spring (A).

Fig. 47: Identifying Damper/Spring

INSTALLATION

GETtheMANUALS.org

1. Front Damper/Spring
    1. Install the damper/spring (A). Note the direction of the damper mounting base as shown.

Fig. 48: Identifying Damper/Spring

    2. Loosely install the new flange nuts (A).

Fig. 49: Identifying Flange Nuts With Torque Specification

2. Front Damper/Spring Lower Side - Reconnection
    1. Loosely install the new damper pinch bolts (A) and the new flange nuts (B).

GETtheMANUALS.org

Fig. 50: Identifying Damper Pinch Bolts And Flange Nuts With Torque Specification

3. Front Damper/Spring - Tighten Under Vehicle's Weight
    1. Raise the front suspension with a floor jack to load the suspension with the vehicle's weight.
    2. Tighten the flange nuts on the upper side of the damper.
    3. Tighten the flange nuts on the lower side of the damper.
4. Front Stabilizer Ball Joint Damper Side - Reconnection
    1. Connect the stabilizer link (A) to the damper.
    2. Tighten the flange nut (B) while holding the joint pin (C) with a hex wrench (D).

GETtheMANUALS.org

Fig. 51: Tightening Flange Nut While Holding Joint Pin With Hex Wrench

5. Front Damper/Spring Items
    1. Install the wheel speed sensor harness clips (A).
    2. Install the brake hose bracket (B).

Fig. 52: Identifying Wheel Speed Sensor Harness Clips And Brake Hose Bracket And Mounting Bolt With Torque Specification

3. Install the cowl top lid (A).
4. Install the hood rear seal (B).
5. Install the clip (C).

Fig. 53: Identifying Cowl Top Lid, Hood Rear Seal And Clip

GETtheMANUALS.org

6. Front Wheel
    1. Install the front wheel.

NOTE: **Before installing the wheel, clean the mating surfaces between the brake disc and the inside of the wheel.**

Fig. 54: Identifying Front Wheel And Studs With Torque Specification

7. Pre-Alignment Checks

    For proper inspection and adjustment of the wheel alignment, do these checks:

    1. Release the parking brake to avoid an incorrect measurement.
    2. Make sure the suspension is not modified.
    3. Make sure the fuel tank is full, and that the spare tire, the jack, and the tools are in place on the vehicle.
    4. Check the tire size and tire pressure according to tire information.
    5. Set the steering column to the middle tilt position and telescopic position.
8. Caster - Inspection

    Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

    1. Check the caster angle.

        Caster angle:

GETtheMANUALS.org

2WD:

With 16 inch wheel: 2 ° 44 '±30 '

Without 16 inch wheel: 2 ° 50 '±30 '

AWD/4WD:

With 16 inch wheel: 2 ° 38 '±30 '

Without 16 inch wheel: 2 ° 44 '±30 '

- If the measurement is within specifications, measure the front camber angle.
- If the measurement is not within specifications, check for bent or damaged suspension components.

9. Camber - Inspection

Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

1. Check the camber angle.

Camber angle:

2WD:

Front:

With 16 inch wheel: -0 ° 01 '±1 ° 00 '

Without 16 inch wheel: -0 ° 10 '±1 ° 00 '

(Maximum difference between the front right and left side: 1 °00 ')

Rear:

With 16 inch wheel: -1 ° 06 '±45 '

Without 16 inch wheel: -1 ° 12 '±45 '

(Maximum difference between the front right and left side: 0 °45 ')

AWD/4WD:

Front:

With 16 inch wheel: -0 ° 08 '±1 ° 00 '

GETtheMANUALS.org

Without 16 inch wheel: 0 ° 00 '±1 ° 00 '

(Maximum difference between the front right and left side: 1 °00 ')

Rear:

With 16 inch wheel: -0 ° 50 '±45 '

Without 16 inch wheel: -1 ° 00 '±45 '

(Maximum difference between the front right and left side: 0 °45 ')

- If the measurement is within specification, measure the toe-in.
- If the measurement for the front camber is not within the specification, go to front camber adjustment.
- If the measurement for the rear camber is not within the specification, check for bent or damaged suspension components.

10. Front Toe - Inspection

Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

1. Set the steering column to the middle tilt position and telescopic positions.
2. Center the steering wheel spokes, and install a steering wheel holder tool.
3. Check the toe with the wheels pointed straight ahead.

Front toe-in: 0±2 mm (0±0.08 in)

- If adjustment is required, go to the front toe adjustment.
- If no adjustment is required, remove the alignment equipment.

11. Turning Angle - Inspection

Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

1. Turn the wheel right and left while applying the brake, and measure the turning angle of both wheels.

Turning angle:

2WD:

Inward:

With 16 inch wheel: 36 ° 29 '±2 °

GETtheMANUALS.org

Without 16 inch wheel: 36 ° 13 '±2 °

Outward (reference):

With 16 inch wheel: 31 ° 13 '

Without 16 inch wheel: 31 ° 02 '

AWD/4WD:

Inward:

With 16 inch wheel: 36 ° 48 '±2 °

Without 16 inch wheel: 36 ° 30 '±2 °

Outward (reference):

With 16 inch wheel: 31 ° 18 '

Without 16 inch wheel: 31 ° 12 '

Fig. 55: Measuring Wheel Alignment (Caster, Camber, Toe And Turning Angle)

2. If the measurement is not within the specifications, even up both sides of the tie-rod threaded section length while adjusting the front toe.
3. If it is correct, but the turning angle is not within the specifications, check for bent or damaged suspension components.

12. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.

GETtheMANUALS.org

2. Turn the ignition switch to ON (II).
3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 56: Identifying Data Link Connector (DLC) Located Under Driver's Side Of Dashboard

13. VSA Sensor Neutral Position - Memorization
    1. Park the vehicle on a flat and level surface, with the steering wheel in the straight ahead position.
    2. Select VSA ADJUSTMENT, then select ALL SENSORS with the HDS, and follow the screen prompts.

    NOTE: See the HDS Help menu for specific instructions.

14. Steering Angle Sensor Neutral Position - Clear
    1. Select EPS ADJUSTMENT, then select EPS STEERING ANGLE SENSOR VALUE CLEAR and follow the screen prompts on the HDS.

    NOTE: See the HDS Help menu for specific instructions.

FRONT KNUCKLE/HUB REMOVAL AND INSTALLATION

SPECIAL TOOL REQUIRED

Image	Description/Tool Number

GETtheMANUALS.org

	Ball Joint Remover, 32 mm 07MAC-SL00102
	Ball Joint Remover, 28 mm 07MAC-SL00202
	Ball Joint Thread Protector, 12 mm 07AAF-SDAA100

GETtheMANUALS.org

	
	Ball Joint Thread Protector, 14 mm 071AF-SZNA100

REMOVAL

GETtheMANUALS.org

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Front Wheel
    1. Remove the front wheel.

Fig. 57: Identifying Front Wheel And Studs

3. Front Brake Caliper - Detach
    1. Remove the brake hose mounting bolt (A).
    2. Remove the caliper assembly (B).

NOTE:

- **To prevent damage to the caliper assembly or brake hose, use a short piece of wire to hang the caliper assembly from the undercarriage.**
- **Do not twist the brake hose excessively.**

Fig. 58: Identifying Caliper Assembly And Brake Hose Mounting Bolt

GETtheMANUALS.org

4. Front Wheel Speed Sensor - Move
    1. Remove the wheel speed sensor (A).

NOTE: Do not disconnect the wheel speed sensor connector.

Fig. 59: Identifying Wheel Speed Sensor

5. Front Driveshaft Spindle Nut
    1. Pry up the stake (A) on the spindle nut (B).
    2. Remove the spindle nut.

Fig. 60: Identifying Stake And Spindle Nut

6. Front Brake Disc
    1. Remove the brake disc (A).

GETtheMANUALS.org

NOTE: **If the brake disc is stuck to the front hub, thread two 8 x 1.25 mm bolts (B) into the brake disc to push it away from the front hub. Turn each bolt 90 degrees at a time to prevent the brake disc from binding.**

Fig. 61: Identifying Brake Disc And Bolts With Torque Specification

7. Ball Joint - Removal

NOTE: **Always use a ball joint remover to disconnect a ball joint. Do not strike the housing or any other part of the ball joint connection to disconnect it.**

1. Install a hex nut (A) or the ball joint thread protector.

NOTE: **When using a hex nut, make sure the nut is flush with the ball joint pin end to prevent damage to the threaded end of the ball joint pin.**

Fig. 62: Identifying Hex Nut And Ball Joint Thread Protector

2. Apply grease to the ball joint remover on the areas shown (A).

GETtheMANUALS.org

Fig. 63: Identifying Grease Applying Area On Ball Joint Remover

3. Install the ball joint remover as shown.

NOTE:

- **Fasten the safety tie (A) securely to a suspension arm or the subframe (B).**
- **Making sure not to damage the ball joint boot.**

4. Tighten the pressure bolt until the ball joint pin pops loose from the ball joint connecting hole.

NOTE: **Do not use pneumatic or electric tools on the pressure bolt.**

5. Remove the ball joint remover.
6. Remove the hex nut or the ball joint thread protector.
7. Pull the ball joint out of the ball joint connecting hole.

GETtheMANUALS.org

Fig. 64: Fastening Safety Tie Securely To Suspension Arm Or Subframe

8. Tie-Rod End Ball Joint - Disconnection
    1. Remove the cotter pin (A).
    2. Remove the nut (B).
    3. Disconnect the tie-rod end ball joint.

Fig. 65: Disconnecting Tie-Rod End Ball Joint

9. Front Lower Ball Joint knuckle side - Disconnection
    1. Remove the lock pin (A).
    2. Remove the castle nut (B).
    3. Disconnect the lower ball joint (C) from the knuckle.

GETtheMANUALS.org

Fig. 66: Disconnecting Lower Ball Joint From Knuckle

10. Front Knuckle/Hub Assembly
    1. Remove the damper pinch bolts (A) and the self-locking nuts (B).
    2. Pull the knuckle (C) outward, and separate the outboard joint (D) from the front hub, then remove the knuckle/hub.

NOTE: **Do not pull the driveshaft end outward. The inner driveshaft inboard joint may come apart.**

Fig. 67: Pulling Knuckle Outward

INSTALLATION

1. Front Knuckle/Hub Assembly
    1. Install the knuckle/hub (A).

GETtheMANUALS.org

NOTE: **Apply grease to the mating surfaces of the wheel bearing and the driveshaft outboard joint.**

Fig. 68: Identifying Knuckle/Hub And Mounting Bolts And Nuts With Torque Specification

2. Front Lower Ball Joint knuckle side - Reconnection
    1. Connect the lower ball joint (A) to the knuckle.
    2. Install the new castle nut (B).

    NOTE: **Torque the castle nut to the lower torque specification, then tighten it only far enough to align the slot with the ball joint pin hole. Do not align the castle nut by loosening it.**

    3. Install the lock pin (C) as shown.

Fig. 69: Identifying Lock Pin, Lower Ball Joint And Castle Nut With Torque Specification

3. Tie-Rod End Ball Joint - Reconnection

GETtheMANUALS.org

1. Connect the tie-rod end ball joint.
2. Install the nut (A).
3. Install the cotter pin (B) as shown.

Fig. 70: Identifying Tie-Rod End Ball Joint, Cotter Pin And Nut With Torque Specification

4. Front Brake Disc
   1. Install the brake disc (A).

NOTE: **Before installing the brake disc, clean the mating surfaces between the front hub and the inside of the brake disc.**

Fig. 71: Identifying Brake Disc And Bolts With Torque Specification

5. Driveshaft Spindle Nut, Front Left
   1. Apply a small amount of engine oil to the seating surface of a new spindle nut (A).
   2. Install the spindle nut.

GETtheMANUALS.org

3. Use a drift to stake the spindle nut shoulder (B) against the driveshaft.

Fig. 72: Identifying Spindle Nut Shoulder And Spindle Nut With Torque Specification

6. Front Wheel Speed Sensor - Move
    1. Install the wheel speed sensor (A).

Fig. 73: Identifying Wheel Speed Sensor And Mounting Bolt With Torque Specification

7. Front Brake Caliper - Reattach
    1. Install the caliper assembly (A).
    2. Install the brake hose mounting bolt (B).

GETtheMANUALS.org

Fig. 74: Identifying Caliper Assembly And Brake Hose Mounting Bolt With Torque Specification

8. Front Wheel
    1. Install the front wheel.

NOTE: **Before installing the wheel, clean the mating surfaces between the brake disc and the inside of the wheel.**

Fig. 75: Identifying Front Wheel And Studs With Torque Specification

9. Pre-Alignment Checks

For proper inspection and adjustment of the wheel alignment, do these checks:

GETtheMANUALS.org

1. Release the parking brake to avoid an incorrect measurement.
2. Make sure the suspension is not modified.
3. Make sure the fuel tank is full, and that the spare tire, the jack, and the tools are in place on the vehicle.
4. Check the tire size and tire pressure according to tire information.
5. Set the steering column to the middle tilt position and telescopic position.

10. Caster - Inspection

Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

1. Check the caster angle.

Caster angle:

2WD:

With 16 inch wheel: 2 ° 44 '±30 '

Without 16 inch wheel: 2 ° 50 '±30 '

AWD/4WD:

With 16 inch wheel: 2 ° 38 '±30 '

Without 16 inch wheel: 2 ° 44 '±30 '

- If the measurement is within specifications, measure the front camber angle.
- If the measurement is not within specifications, check for bent or damaged suspension components.

11. Camber - Inspection

Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

1. Check the camber angle.

Camber angle:

2WD:

Front:

With 16 inch wheel: -0 ° 01 '±1 ° 00 '

GETtheMANUALS.org

Without 16 inch wheel: -0 ° 10 '±1 ° 00 '

(Maximum difference between the front right and left side: 1 °00 ')

Rear:

With 16 inch wheel: -1 ° 06 '±45 '

Without 16 inch wheel: -1 ° 12 '±45 '

(Maximum difference between the front right and left side: 0 °45 ')

AWD/4WD:

Front:

With 16 inch wheel: -0 ° 08 '±1 ° 00 '

Without 16 inch wheel: 0 ° 00 '±1 ° 00 '

(Maximum difference between the front right and left side: 1 °00 ')

Rear:

With 16 inch wheel: -0 ° 50 '±45 '

Without 16 inch wheel: -1 ° 00 '±45 '

(Maximum difference between the front right and left side: 0 °45 ')

- If the measurement is within specification, measure the toe-in.
- If the measurement for the front camber is not within the specification, go to front camber adjustment.
- If the measurement for the rear camber is not within the specification, check for bent or damaged suspension components.

12. Front Toe - Inspection

Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

1. Set the steering column to the middle tilt position and telescopic positions.
2. Center the steering wheel spokes, and install a steering wheel holder tool.
3. Check the toe with the wheels pointed straight ahead.

Front toe-in: 0±2 mm (0±0.08 in)

GETtheMANUALS.org

- If adjustment is required, go to the front toe adjustment.
- If no adjustment is required, remove the alignment equipment.

13. Turning Angle - Inspection

Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

1. Turn the wheel right and left while applying the brake, and measure the turning angle of both wheels.

Turning angle:

2WD:

Inward:

With 16 inch wheel: 36 ° 29 '±2 °

Without 16 inch wheel: 36 ° 13 '±2 °

Outward (reference):

With 16 inch wheel: 31 ° 13 '

Without 16 inch wheel: 31 ° 02 '

AWD/4WD:

Inward:

With 16 inch wheel: 36 ° 48 '±2 °

Without 16 inch wheel: 36 ° 30 '±2 °

Outward (reference):

With 16 inch wheel: 31 ° 18 '

Without 16 inch wheel: 31 ° 12 '

GETtheMANUALS.org

Fig. 76: Measuring Wheel Alignment (Caster, Camber, Toe And Turning Angle)

2. If the measurement is not within the specifications, even up both sides of the tie-rod threaded section length while adjusting the front toe.
3. If it is correct, but the turning angle is not within the specifications, check for bent or damaged suspension components.

14. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 77: Identifying Data Link Connector (DLC) Located Under Driver's Side Of Dashboard

15. VSA Sensor Neutral Position - Memorization

GETtheMANUALS.org

1. Park the vehicle on a flat and level surface, with the steering wheel in the straight ahead position.
2. Select VSA ADJUSTMENT, then select ALL SENSORS with the HDS, and follow the screen prompts.

NOTE: See the HDS Help menu for specific instructions.

16. Steering Angle Sensor Neutral Position - Clear
    1. Select EPS ADJUSTMENT, then select EPS STEERING ANGLE SENSOR VALUE CLEAR and follow the screen prompts on the HDS.

NOTE: See the HDS Help menu for specific instructions.

FRONT LOWER ARM REMOVAL AND INSTALLATION

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Front Wheel
    1. Remove the front wheel.

Fig. 78: Identifying Front Wheel And Studs

3. Front Stabilizer Bar Bushing Holder
    1. Remove the front stabilizer bar bushing holder (A).

GETtheMANUALS.org

Fig. 79: Identifying Front Stabilizer Bar Bushing Holder

4. Lower Ball Joint Lower Arm Side - Disconnection
    1. Remove the flange bolt (A).
    2. Remove the flange nuts (B).
    3. Disconnect the lower arm (C) from the front lower ball joint (D).

Fig. 80: Identifying Lower Arm, Front Lower Ball Joint, Flange Nuts And Flange Bolt

5. Front Lower Arm
    1. Remove the lower arm (A).
    2. Remove the bushing stopper bracket (B) from the lower arm.

GETtheMANUALS.org

Fig. 81: Identifying Bushing Stopper Bracket, Lower Arm And Mounting Bolts With Torque Specification

INSTALLATION

1. Front Lower Arm
    1. Install the bushing stopper bracket (A) on the lower arm (B).
    2. Install the lower arm.
    3. Loosely install the new flange bolts (C).

GETtheMANUALS.org

Fig. 82: Identifying Bushing Stopper Bracket, Lower Arm And Flange Bolts With Torque Specification

2. Front Lower Ball Joint Lower Arm Side - Reconnection
    1. Connect the front lower ball joint (A) to the lower arm.
    2. Install the new flange nuts and the new flange bolt in the sequence shown.

GETtheMANUALS.org

Fig. 83: Identifying Lower Ball Joint, Flange Nuts And Bolt Tightening Sequence With Torque Specification

3. Front Lower Arm - Tighten Vehicle's Weight
    1. Raise the front suspension with a floor jack to load the suspension with the vehicle's weight.
    2. Tighten the flange bolts to the specified torque.
4. Front Stabilizer Bar Bushing Holder
    1. Install the front stabilizer bar bushing holder (A).

Fig. 84: Identifying Front Stabilizer Bar Bushing Holder And Mounting Bolts With Torque Specification

GETtheMANUALS.org

5. Front Wheel
    1. Install the front wheel.

NOTE: **Before installing the wheel, clean the mating surfaces between the brake disc and the inside of the wheel.**

Fig. 85: Identifying Front Wheel And Studs With Torque Specification

6. Pre-Alignment Checks

    For proper inspection and adjustment of the wheel alignment, do these checks:

    1. Release the parking brake to avoid an incorrect measurement.
    2. Make sure the suspension is not modified.
    3. Make sure the fuel tank is full, and that the spare tire, the jack, and the tools are in place on the vehicle.
    4. Check the tire size and tire pressure according to tire information.
    5. Set the steering column to the middle tilt position and telescopic position.
7. Caster - Inspection

    Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

    1. Check the caster angle.

        Caster angle:

GETtheMANUALS.org

2WD:

With 16 inch wheel: 2 ° 44 '±30 '

Without 16 inch wheel: 2 ° 50 '±30 '

AWD/4WD:

With 16 inch wheel: 2 ° 38 '±30 '

Without 16 inch wheel: 2 ° 44 '±30 '

- If the measurement is within specifications, measure the front camber angle.
- If the measurement is not within specifications, check for bent or damaged suspension components.

8. Camber - Inspection

Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

1. Check the camber angle.

Camber angle:

2WD:

Front:

With 16 inch wheel: -0 ° 01 '±1 ° 00 '

Without 16 inch wheel: -0 ° 10 '±1 ° 00 '

(Maximum difference between the front right and left side: 1 °00 ')

Rear:

With 16 inch wheel: -1 ° 06 '±45 '

Without 16 inch wheel: -1 ° 12 '±45 '

(Maximum difference between the front right and left side: 0 °45 ')

AWD/4WD:

Front:

With 16 inch wheel: -0 ° 08 '±1 ° 00 '

GETtheMANUALS.org

Without 16 inch wheel: 0 ° 00 '±1 ° 00 '

(Maximum difference between the front right and left side: 1 °00 ')

Rear:

With 16 inch wheel: -0 ° 50 '±45 '

Without 16 inch wheel: -1 ° 00 '±45 '

(Maximum difference between the front right and left side: 0 °45 ')

- If the measurement is within specification, measure the toe-in.
- If the measurement for the front camber is not within the specification, go to front camber adjustment.
- If the measurement for the rear camber is not within the specification, check for bent or damaged suspension components.

9. Front Toe - Inspection

Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

1. Set the steering column to the middle tilt position and telescopic positions.
2. Center the steering wheel spokes, and install a steering wheel holder tool.
3. Check the toe with the wheels pointed straight ahead.

Front toe-in: 0±2 mm (0±0.08 in)

- If adjustment is required, go to the front toe adjustment.
- If no adjustment is required, remove the alignment equipment.

10. Turning Angle - Inspection

Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

1. Turn the wheel right and left while applying the brake, and measure the turning angle of both wheels.

Turning angle:

2WD:

Inward:

With 16 inch wheel: 36 ° 29 '±2 °

GETtheMANUALS.org

Without 16 inch wheel: 36 ° 13 '±2 °

Outward (reference):

With 16 inch wheel: 31 ° 13 '

Without 16 inch wheel: 31 ° 02 '

AWD/4WD:

Inward:

With 16 inch wheel: 36 ° 48 '±2 °

Without 16 inch wheel: 36 ° 30 '±2 °

Outward (reference):

With 16 inch wheel: 31 ° 18 '

Without 16 inch wheel: 31 ° 12 '

Fig. 86: Measuring Wheel Alignment (Caster, Camber, Toe And Turning Angle)

2. If the measurement is not within the specifications, even up both sides of the tie-rod threaded section length while adjusting the front toe.
3. If it is correct, but the turning angle is not within the specifications, check for bent or damaged suspension components.

11. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.

GETtheMANUALS.org

2. Turn the ignition switch to ON (II).
3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 87: Identifying Data Link Connector (DLC) Located Under Driver's Side Of Dashboard

12. VSA Sensor Neutral Position - Memorization
    1. Park the vehicle on a flat and level surface, with the steering wheel in the straight ahead position.
    2. Select VSA ADJUSTMENT, then select ALL SENSORS with the HDS, and follow the screen prompts.

    NOTE: See the HDS Help menu for specific instructions.

13. Steering Angle Sensor Neutral Position - Clear
    1. Select EPS ADJUSTMENT, then select EPS STEERING ANGLE SENSOR VALUE CLEAR and follow the screen prompts on the HDS.

    NOTE: See the HDS Help menu for specific instructions.

FRONT LOWER BALL JOINT REMOVAL AND INSTALLATION

SPECIAL TOOL REQUIRED

Image	Description/Tool Number

GETtheMANUALS.org

	Ball Joint Remover, 32 mm 07MAC-SL00102
	Ball Joint Thread Protector, 14 mm 071AF-SZNA100

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Front Wheel
    1. Remove the front wheel.

GETtheMANUALS.org

Fig. 88: Identifying Front Wheel And Studs

3. Ball Joint - Removal

NOTE: **Always use a ball joint remover to disconnect a ball joint. Do not strike the housing or any other part of the ball joint connection to disconnect it.**

1. Install a hex nut (A) or the ball joint thread protector.

NOTE: **When using a hex nut, make sure the nut is flush with the ball joint pin end to prevent damage to the threaded end of the ball joint pin.**

Fig. 89: Identifying Hex Nut And Ball Joint Thread Protector

2. Apply grease to the ball joint remover on the areas shown (A).

GETtheMANUALS.org

Fig. 90: Identifying Grease Applying Area On Ball Joint Remover

3. Install the ball joint remover as shown.

NOTE:

- **Fasten the safety tie (A) securely to a suspension arm or the subframe (B).**
- **Making sure not to damage the ball joint boot.**

4. Tighten the pressure bolt until the ball joint pin pops loose from the ball joint connecting hole.

NOTE: **Do not use pneumatic or electric tools on the pressure bolt.**

5. Remove the ball joint remover.
6. Remove the hex nut or the ball joint thread protector.
7. Pull the ball joint out of the ball joint connecting hole.

GETtheMANUALS.org

Fig. 91: Fastening Safety Tie Securely To Suspension Arm Or Subframe

4. Front Lower Ball Joint knuckle side - Disconnection
    1. Remove the lock pin (A).
    2. Remove the castle nut (B).
    3. Disconnect the lower ball joint (C) from the knuckle.

Fig. 92: Disconnecting Lower Ball Joint From Knuckle

5. Front Lower Ball Joint
    1. Remove the flange bolt (A).
    2. Remove the flange nuts (B).
    3. Remove the front lower ball joint (C).

GETtheMANUALS.org

Fig. 93: Identifying Front Lower Ball Joint, Flange Nuts And Flange Bolt

INSTALLATION

1. Front Lower Ball Joint
    1. Install the lower ball joint (A) to the lower arm.
    2. Install the new flange nuts and the new flange bolt in the sequence shown.

Fig. 94: Identifying Lower Ball Joint, Flange Nuts And Bolt Tightening Sequence With Torque Specification

2. Front Lower Ball Joint knuckle side - Reconnection

GETtheMANUALS.org

1. Connect the lower ball joint (A) to the knuckle.
2. Install the new castle nut (B).

NOTE: **Torque the castle nut to the lower torque specification, then tighten it only far enough to align the slot with the ball joint pin hole. Do not align the castle nut by loosening it.**

3. Install the lock pin (C) as shown.

Fig. 95: Identifying Lock Pin, Lower Ball Joint And Castle Nut With Torque Specification

3. Front Wheel
   1. Install the front wheel.

NOTE: **Before installing the wheel, clean the mating surfaces between the brake disc and the inside of the wheel.**

GETtheMANUALS.org

Fig. 96: Identifying Front Wheel And Studs With Torque Specification

FRONT STABILIZER BAR REMOVAL AND INSTALLATION

SPECIAL TOOL REQUIRED

Image	Description/Tool Number
	Ball Joint Remover, 28 mm 07MAC-SL00202

GETtheMANUALS.org

	Ball Joint Thread Protector, 12 mm 07AAF-SDAA100
	Subframe Alignment Pin 070AG-SJAA10S

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Front Wheel - Both Side
    1. Remove both front wheels.

GETtheMANUALS.org

Fig. 97: Identifying Front Wheel And Studs

3. Steering Joint Cover
    1. Remove the steering joint cover (A).

Fig. 98: Identifying Steering Joint Cover

4. Steering Column Lower Slide Shaft - Hold
    1. Set the steering column to the center tilt position, and to the center telescopic position.
    2. Hold the lower slide shaft (A) on the column with a piece of wire (B) between the joint yoke (C) of the lower slide shaft and the joint yoke (D) of the upper shaft to prevent the lower slider shaft from pulling out.

GETtheMANUALS.org

Fig. 99: Holding Lower Slide Shaft On Column With Piece Of Wire

5. Steering Wheel Hold
    1. Center the steering wheel spoke angle.
    2. Install a commercially available steering wheel holder tool (A).

Fig. 100: Installing Commercially Available Steering Wheel Holder Tool

6. Steering Joint - Disconnection
    1. Remove the steering joint bolt (A).
    2. Disconnect the steering joint (B) from the pinion shaft.
    3. Remove the center guide (C) (if equipped), and discard it.

GETtheMANUALS.org

Fig. 101: Identifying Steering Joint, Center Guide And Steering Joint Bolt

7. Ball Joint - Removal

NOTE: **Always use a ball joint remover to disconnect a ball joint. Do not strike the housing or any other part of the ball joint connection to disconnect it.**

1. Install a hex nut (A) or the ball joint thread protector.

NOTE: **When using a hex nut, make sure the nut is flush with the ball joint pin end to prevent damage to the threaded end of the ball joint pin.**

Fig. 102: Identifying Hex Nut And Ball Joint Thread Protector

2. Apply grease to the ball joint remover on the areas shown (A).

GETtheMANUALS.org

Fig. 103: Identifying Grease Applying Area On Ball Joint Remover

3. Install the ball joint remover as shown.

NOTE:

- **Fasten the safety tie (A) securely to a suspension arm or the subframe (B).**
- **Making sure not to damage the ball joint boot.**

4. Tighten the pressure bolt until the ball joint pin pops loose from the ball joint connecting hole.

NOTE: **Do not use pneumatic or electric tools on the pressure bolt.**

5. Remove the ball joint remover.
6. Remove the hex nut or the ball joint thread protector.
7. Pull the ball joint out of the ball joint connecting hole.

GETtheMANUALS.org

Fig. 104: Fastening Safety Tie Securely To Suspension Arm Or Subframe

8. Tie-Rod End Ball Joint - Disconnection, Both Side
    1. Remove the cotter pin (A) from the tie-rod end ball joint.
    2. Remove the nut (B).
    3. Disconnect the tie-rod end ball joint.

NOTE: **Be careful not to damage the ball joint boot when installing the remover.**

Fig. 105: Disconnecting Tie-Rod End Ball Joint

9. Front Stabilizer Link Stabilizer Bar Side - Disconnection, Both Side
    1. Remove the flange nuts (A) while holding the respective joint pin (B) with a hex wrench (C).
    2. Disconnect both sides of the stabilizer link (D) from the front stabilizer bar (E).

GETtheMANUALS.org

Fig. 106: Removing Flange Nuts While Holding Respective Joint Pin With Hex Wrench

10. Front Splash Shield
    1. Remove the bolts (A), then remove the clips (B) that secure the front inner fender and the front splash shield (C) to the body.
    2. From under the front bumper (D), remove the clips (E).
    3. From under the body, remove the clips (F), then pull out the front splash shield.

GETtheMANUALS.org

Fig. 107: Identifying Front Bumper, Clips, Bolts, Front Inner Fender And Front Splash Shield With Torque Specification

11. Front Floor Undercover
    1. Remove the bolts (A) and the clips (B, C) securing the front floor undercover (D), then remove the front floor undercover.

GETtheMANUALS.org

Fig. 108: Identifying Front Floor Undercover, Bolts And Clips

12. Under-Floor TWC Assembly
    1. Remove the under-floor TWC.

Fig. 109: Identifying Under-Floor TWC Assembly Related Components

13. Left Middle Floor Undercover (AWD/4WD)

GETtheMANUALS.org

1. Remove the bolts (A) and clips (B, C), then remove the left middle floor undercover (D).

Fig. 110: Identifying Left Middle Floor Undercover, Bolts And Clips

14. Propeller Shaft Protector No. 1 (AWD/4WD)
    1. Remove the No. 1 propeller shaft protector (A).

Fig. 111: Identifying No. 1 Propeller Shaft Protector And Mounting Bolts

GETtheMANUALS.org

15. Propeller Shaft Protector No. 2 (AWD/4WD)
    1. Remove the No. 2 propeller shaft protector (A).

Fig. 112: Identifying No. 2 Propeller Shaft Protector And Mounting Bolts

16. Propeller Shaft Transmission Side - Disconnection (AWD/4WD)
    1. Make reference mark (A) across the No. 1 propeller shaft (B) and the transfer companion flange (C).
    2. Remove the No. 1 propeller shaft flange bolts (D).

Fig. 113: Identifying Reference Mark, No. 1 Propeller Shaft, Transfer Companion Flange And Flange Bolts With Torque Specification

17. Propeller Shaft Differential Side - Disconnection (AWD/4WD)
    1. Make reference mark (A) across the No. 2 propeller shaft (B) and the rear differential companion flange (C).
    2. Remove the No. 2 propeller shaft flange bolts (D).

GETtheMANUALS.org

Fig. 114: Identifying Reference Mark, No. 2 Propeller Shaft, Rear Differential Companion Flange And Flange Bolts With Torque Specification

18. Propeller Shaft Assembly (AWD/4WD)
    1. Remove the center support bearing mounting bolts (A), then remove the propeller shaft assembly (B).

Fig. 115: Identifying Propeller Shaft Assembly And Center Support Bearing Mounting Bolts

19. Subframe Support
    1. Attach the subframe adapter (A) to the front subframe by looping the belt (B) over the front of the front subframe (C), then secure the belt with its stop (D).
    2. Raise the jack and line up the slots in the subframe adapter arms with the bolt holes on the jack base, then securely attach them with four bolts.

GETtheMANUALS.org

Fig. 116: Attaching Subframe Adapter To Front Subframe By Looping Belt Over Front Of Front Subframe

20. Lower Torque Rod - Disconnection
    1. Remove the lower torque rod mount mounting bolts (A).

Fig. 117: Identifying Lower Torque Rod Mount Mounting Bolts

21. Front Subframe - Move
    1. Remove the mid mounting bolts (A) on both sides.

GETtheMANUALS.org

Fig. 118: Identifying Mid Mounting Bolts

2. Loosen the front subframe mounting bolts (A) so they are about 30 mm (1.18 in) from the mounting surface on both sides.

NOTE: Do not loosen the front subframe mounting bolts more than necessary.

Fig. 119: Identifying Front Subframe Mounting Bolts Loosening Dimension

3. Remove the front subframe mounting bolts (A) on both side.
4. Lower the jack slowly until the front subframe has dropped about 130 mm (5.12 in).

GETtheMANUALS.org

Fig. 120: Identifying Front Subframe Mounting Bolts

22. Front Stabilizer Bar

NOTE: Be careful not to damage the steering gearbox.

1. Remove the front stabilizer bar bushing holders (A).
2. Remove the bushings (B).
3. Remove the front stabilizer bar (C).

Fig. 121: Identifying Front Stabilizer Bar, Front Stabilizer Bar Bushing Holders And Bushings With Mounting Bolts

GETtheMANUALS.org

INSTALLATION

1. Front Stabilizer Bar

NOTE: **Be careful not to damage the steering gearbox.**

1. Install the front stabilizer bar (A).
2. Install the bushings (B).

NOTE:

- **Note the direction of installation for the bushing.**
- **Align the paint mark (C) on the stabilizer bar with the side of the bushing.**

3. Install the front stabilizer bar bushing holders (D).

Fig. 122: Identifying Front Stabilizer Bar Bushing Holders, Paint Mark, Bushings, Front Stabilizer Bar And Mounting Bolts With Torque Specification

2. Front Subframe - Move
   1. Turn the lip (A) of the pinion shaft grommet.
   2. Lift the front subframe (B) up to the body, then restore the pinion shaft grommet back to proper position.

NOTE: **Be sure that the pinion shaft grommet is securely in place. Make sure the lip of the pinion shaft grommet is not turned up. Incorrect installation can cause leakage of water and mud, or noise.**

GETtheMANUALS.org

Fig. 123: Lifting Front Subframe Up To Body

3. Loosely install the new front subframe mounting bolts (A).

Fig. 124: Identifying Front Subframe Mounting Bolts With Torque Specification

GETtheMANUALS.org

Fig. 125: Identifying Front Subframe Mounting Bolt With Torque Specification

4. Loosely install the mid mounting bolts (A).

Fig. 126: Identifying Mid Mounting Bolt With Torque Specification

3. Front Subframe - Alignment

NOTE:

- **Align the front subframe in the following sequence.**
- **When Installing, align both installation reference holes in the subframe with both reference holes in the body using the subframe alignment pin.**

1. Insert the subframe alignment pin (A) through the positioning hole (B) on the right rear subframe, and into the positioning hole (C) on the body, then loosely tighten the subframe right rear mounting bolts.

GETtheMANUALS.org

Fig. 127: Inserting Subframe Alignment Pin Through Positioning Hole On Right Rear Subframe And Body

2. Insert the subframe alignment pin through the positioning hole on the left rear subframe, and into the positioning hole on the body, then loosely tighten the subframe left rear mounting bolts.
3. Tighten the subframe mounting bolts to the specified torque values starting with the right rear subframe mounting bolt. Use the subframe alignment pin when tightening the rear side subframe mounting bolts.
4. Check all of the subframe mounting bolts, and retighten if necessary.

NOTE: Tighten the bolts in the sequence shown.

5. Tighten the mid mounting bolts to the specified torque.
6. Lower the transmission jack supporting the subframe.

4. Lower Torque Rod - Reconnection
   1. Loosely install the new lower torque rod mounting bolts (A).

GETtheMANUALS.org

Fig. 128: Identifying Lower Torque Rod Mounting Bolts

5. Lower Torque Rod Mounting Bolt - Tighten
    1. Loosen the lower torque mount mounting bolt.
    2. Tighten the lower torque rod mount mounting bolts in the numbered sequence shown.

Fig. 129: Identifying Lower Torque Rod Mount Mounting Bolts Tightening Sequence With Torque Specification

6. Propeller Shaft Assembly (AWD/4WD)
    1. Install the propeller shaft assembly (A), then Install new center support bearing mounting bolts (B).

GETtheMANUALS.org

Fig. 130: Identifying Propeller Shaft Assembly And Center Support Bearing Mounting Bolts With Torque Specification

7. Propeller Shaft Differential Side - Reconnection (AWD/4WD)
    1. Set the No. 2 propeller shaft (A) to the rear differential companion flange (B) by aligning the reference mark (C) you made during the removal procedure.
    2. Install new No. 2 propeller shaft flange bolts (D) to the specified torque.

Fig. 131: Identifying Reference Mark, No. 2 Propeller Shaft, Rear Differential Companion Flange And Flange Bolts With Torque Specification

8. Propeller Shaft Transmission Side - Reconnection (AWD/4WD)

GETtheMANUALS.org

1. Set the No. 1 propeller shaft (A) to the transfer companion flange (B) by aligning the reference mark (C) you made during the removal procedure.
2. Install new No. 1 propeller shaft flange bolts (D) to the specified torque.

Fig. 132: Identifying Reference Mark, No. 1 Propeller Shaft, Transfer Companion Flange And Flange Bolts With Torque Specification

9. Propeller Shaft Protector No. 2 (AWD/4WD)
    1. Install the No. 2 propeller shaft protector (A).

Fig. 133: Identifying No. 2 Propeller Shaft Protector And Mounting Bolts With Torque Specification

10. Propeller Shaft Protector No. 1 (AWD/4WD)

GETtheMANUALS.org

1. Install the No. 1 propeller shaft protector (A).

Fig. 134: Identifying No. 1 Propeller Shaft Protector And Mounting Bolts With Torque Specification

11. Left Middle Floor Undercover (AWD/4WD)
    1. Install the left middle floor undercover (A), then install the bolts (B) and the clips (C, D). The clips snap into place securely.

GETtheMANUALS.org

Fig. 135: Identifying Left Middle Floor Undercover, Bolts And Clips

12. Under Floor TWC Assembly
    1. Install the under-floor TWC.

Fig. 136: Identifying Under-Floor TWC Assembly Related Components With Torque

GETtheMANUALS.org

Specification

13. Front Floor Undercover
    1. Install the front floor undercover (A), then install the bolts (B) and the clips (C, D). Make sure the clips snap into place securely.

Fig. 137: Identifying Front Floor Undercover, Bolts And With Torque Specification

14. Front Splash Shield
    1. Install the front splash shield (A), then install the bolts (B) and the clips (C, D). Make sure the clips snap into place securely.

GETtheMANUALS.org

Fig. 138: Identifying Front Splash Shield, Bolts And Clips With Torque Specification

15. Front Stabilizer Link Stabilizer Bar Side - Reconnection, Both Side
    1. Connect both sides of the stabilizer link (A) to the front stabilizer bar (B).
    2. Install the flange nuts (C), and tighten them to the specified torque while holding the respective joint pin (D) with a hex wrench (E).

GETtheMANUALS.org

Fig. 139: Connecting Both Sides Of Stabilizer Link To Front Stabilizer Bar

16. Tie-Rod End Ball Joint - Connection, Both Side
    1. Wipe off any grease contamination from the ball joint tapered section and threads.
    2. Connect the tie-rod ball joint (A) to the knuckle.
    3. Install the nut (B) and tighten to the specified torque.
    4. Install a new cotter pin (C).

NOTE: Bend the cotter pin as shown.

GETtheMANUALS.org

Fig. 140: Connecting Tie-Rod Ball Joint To Knuckle

17. Steering Column Lower Slide Shaft - Release
    1. Cut the wire (A).

Fig. 141: Identifying Steering Column Lower Slide Shaft Wire

18. Steering Wheel Release
    1. Remove the steering wheel holder tool (A).

Fig. 142: Identifying Steering Wheel Holder Tool

19. Steering Joint - Reconnection
    1. Place the rack in the straight ahead driving position.
    2. Slip the lower end of the steering joint (A) onto the pinion shaft (B).

NOTE: Position the steering column by aligning the gap (C) within the angle.

GETtheMANUALS.org

Fig. 143: Identifying Steering Joint And Pinion Shaft

3. Align the bolt hole (A) on the steering joint with the groove (B) around the pinion shaft.
4. Loosely install the steering joint bolt (C).
5. Be sure that the joint bolt is securely in the groove in the pinion shaft.
6. Pull on the steering joint to make sure that the steering joint is fully seated.
7. Tighten the steering joint bolt to the specified torque.

Fig. 144: Identifying Bolt Hole, Groove And Steering Joint Bolt With Torque Specification

20. Steering Joint Cover
    1. Install the steering joint cover (A).

GETtheMANUALS.org

Fig. 145: Identifying Steering Joint Cover

21. Front Wheel - Both Side
    1. Install both front wheels.

NOTE: **Before installing the wheel, clean the mating surfaces between the brake disc and the inside of the wheel.**

Fig. 146: Identifying Front Wheels And Studs With Torque Specification

22. Steering After Install - Check
    1. After installation, check these items:
        - Start the engine, allow it to idle, and turn the steering wheel from lock to lock several times.
        - Check that the EPS indicator does not come on.
        - Check the steering wheel spoke angle. If steering spoke angles to the right and left are not

GETtheMANUALS.org

equal (steering wheel and rack are not centered), correct the engagement of the joint/pinion shaft splines.

23. Pre-Alignment Checks

For proper inspection and adjustment of the wheel alignment, do these checks:

1. Release the parking brake to avoid an incorrect measurement.
2. Make sure the suspension is not modified.
3. Make sure the fuel tank is full, and that the spare tire, the jack, and the tools are in place on the vehicle.
4. Check the tire size and tire pressure according to tire information.
5. Set the steering column to the middle tilt position and telescopic position.

24. Caster - Inspection

Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

1. Check the caster angle.

   Caster angle:

   2WD:

   With 16 inch wheel: 2 ° 44 '±30 '

   Without 16 inch wheel: 2 ° 50 '±30 '

   AWD/4WD:

   With 16 inch wheel: 2 ° 38 '±30 '

   Without 16 inch wheel: 2 ° 44 '±30 '

   - If the measurement is within specifications, measure the front camber angle.
   - If the measurement is not within specifications, check for bent or damaged suspension components.

25. Camber - Inspection

Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

1. Check the camber angle.

   Camber angle:

GETtheMANUALS.org

2WD:

Front:

With 16 inch wheel: -0 ° 01 '±1 ° 00 '

Without 16 inch wheel: -0 ° 10 '±1 ° 00 '

(Maximum difference between the front right and left side: 1 °00 ')

Rear:

With 16 inch wheel: -1 ° 06 '±45 '

Without 16 inch wheel: -1 ° 12 '±45 '

(Maximum difference between the front right and left side: 0 °45 ')

AWD/4WD:

Front:

With 16 inch wheel: -0 ° 08 '±1 ° 00 '

Without 16 inch wheel: 0 ° 00 '±1 ° 00 '

(Maximum difference between the front right and left side: 1 °00 ')

Rear:

With 16 inch wheel: -0 ° 50 '±45 '

Without 16 inch wheel: -1 ° 00 '±45 '

(Maximum difference between the front right and left side: 0 °45 ')

- If the measurement is within specification, measure the toe-in.
- If the measurement for the front camber is not within the specification, go to front camber adjustment.
- If the measurement for the rear camber is not within the specification, check for bent or damaged suspension components.

26. Front Toe - Inspection

Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

GETtheMANUALS.org

1. Set the steering column to the middle tilt position and telescopic positions.
2. Center the steering wheel spokes, and install a steering wheel holder tool.
3. Check the toe with the wheels pointed straight ahead.

   Front toe-in: 0±2 mm (0±0.08 in)

   - If adjustment is required, go to the front toe adjustment.
   - If no adjustment is required, remove the alignment equipment.

27. Turning Angle - Inspection

Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

1. Turn the wheel right and left while applying the brake, and measure the turning angle of both wheels.

   Turning angle:

   2WD:

   Inward:

   With 16 inch wheel: 36 ° 29 '±2 °

   Without 16 inch wheel: 36 ° 13 '±2 °

   Outward (reference):

   With 16 inch wheel: 31 ° 13 '

   Without 16 inch wheel: 31 ° 02 '

   AWD/4WD:

   Inward:

   With 16 inch wheel: 36 ° 48 '±2 °

   Without 16 inch wheel: 36 ° 30 '±2 °

   Outward (reference):

   With 16 inch wheel: 31 ° 18 '

   Without 16 inch wheel: 31 ° 12 '

GETtheMANUALS.org

Fig. 147: Measuring Wheel Alignment (Caster, Camber, Toe And Turning Angle)

2. If the measurement is not within the specifications, even up both sides of the tie-rod threaded section length while adjusting the front toe.
3. If it is correct, but the turning angle is not within the specifications, check for bent or damaged suspension components.

28. Test Drive
    1. Test-drive the vehicle.
29. Front Stabilizer Link - Tighten
    1. After 5 minutes of driving, tighten the self-locking nut again to the specified torque value.
30. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

GETtheMANUALS.org

Fig. 148: Identifying Data Link Connector (DLC) Located Under Driver's Side Of Dashboard

31. VSA Sensor Neutral Position - Memorization
    1. Park the vehicle on a flat and level surface, with the steering wheel in the straight ahead position.
    2. Select VSA ADJUSTMENT, then select ALL SENSORS with the HDS, and follow the screen prompts.

    NOTE: See the HDS Help menu for specific instructions.

32. Steering Angle Sensor Neutral Position - Clear
    1. Select EPS ADJUSTMENT, then select EPS STEERING ANGLE SENSOR VALUE CLEAR and follow the screen prompts on the HDS.

    NOTE: See the HDS Help menu for specific instructions.

FRONT STABILIZER LINK REMOVAL AND INSTALLATION

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Front Wheel
    1. Remove the front wheel.

GETtheMANUALS.org

Fig. 149: Identifying Front Wheel And Studs

3. Front Stabilizer Link
    1. Remove the flange nuts (A) while holding the respective joint pin (B) with a hex wrench (C).
    2. Remove the stabilizer link (D).

Fig. 150: Removing Flange Nuts While Holding Respective Joint Pin With Hex Wrench

INSTALLATION

1. Front Stabilizer Link
    1. Install the stabilizer link (A).

    NOTE: The stabilizer link has a paint mark (B).

    2. Install the flange nuts (C), and tighten them to the specified torque while holding the respective

GETtheMANUALS.org

joint pin (D) with a hex wrench (E).

Fig. 151: Installing Flange Nuts

2. Front Wheel
    1. Install the front wheel.

NOTE: **Before installing the wheel, clean the mating surfaces between the brake disc and the inside of the wheel.**

Fig. 152: Identifying Front Wheel And Studs With Torque Specification

GETtheMANUALS.org

3. Test Drive
    1. Test-drive the vehicle.
4. Front Stabilizer Link - Tighten
    1. After 5 minutes of driving, tighten the self-locking nut again to the specified torque value.

   Exploded View

GETtheMANUALS.org

Fig. 153: Exploded View Of Front Knuckle/Hub/Wheel Bearing

REMOVAL

NOTE: Refer to the EXPLODED VIEW as needed during the following procedures.

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Front Wheel
    1. Remove the front wheel.

GETtheMANUALS.org

Fig. 154: Identifying Front Wheel And Studs

3. Front Brake Caliper - Detach
    1. Remove the brake hose mounting bolt (A).
    2. Remove the caliper assembly (B).

NOTE:

- **To prevent damage to the caliper assembly or brake hose, use a short piece of wire to hang the caliper assembly from the undercarriage.**
- **Do not twist the brake hose excessively.**

Fig. 155: Identifying Caliper Assembly And Brake Hose Mounting Bolt

4. Front Wheel Speed Sensor - Move
    1. Remove the wheel speed sensor (A).

NOTE: **Do not disconnect the wheel speed sensor connector.**

GETtheMANUALS.org

Fig. 156: Identifying Wheel Speed Sensor

5. Front Driveshaft Spindle Nut
    1. Pry up the stake (A) on the spindle nut (B).
    2. Remove the spindle nut.

Fig. 157: Identifying Stake And Spindle Nut

6. Front Brake Disc
    1. Remove the brake disc (A).

NOTE: **If the brake disc is stuck to the front hub, thread two 8 x 1.25 mm bolts (B) into the brake disc to push it away from the front hub. Turn each bolt 90 degrees at a time to prevent the brake disc from binding.**

GETtheMANUALS.org

Fig. 158: Identifying Brake Disc And Bolts With Torque Specification

7. Ball Joint - Removal

NOTE: **Always use a ball joint remover to disconnect a ball joint. Do not strike the housing or any other part of the ball joint connection to disconnect it.**

1. Install a hex nut (A) or the ball joint thread protector.

NOTE: **When using a hex nut, make sure the nut is flush with the ball joint pin end to prevent damage to the threaded end of the ball joint pin.**

Fig. 159: Identifying Hex Nut And Ball Joint Thread Protector

2. Apply grease to the ball joint remover on the areas shown (A).

GETtheMANUALS.org

Fig. 160: Identifying Grease Applying Area On Ball Joint Remover

3. Install the ball joint remover as shown.

NOTE:

- **Fasten the safety tie (A) securely to a suspension arm or the subframe (B).**
- **Making sure not to damage the ball joint boot.**

4. Tighten the pressure bolt until the ball joint pin pops loose from the ball joint connecting hole.

NOTE: **Do not use pneumatic or electric tools on the pressure bolt.**

5. Remove the ball joint remover.

Fig. 161: Fastening Safety Tie Securely To Suspension Arm Or Subframe

GETtheMANUALS.org

6. Remove the hex nut or the ball joint thread protector.
7. Pull the ball joint out of the ball joint connecting hole.

8. Tie-Rod End Ball Joint - Disconnection
    1. Remove the cotter pin (A).
    2. Remove the nut (B).
    3. Disconnect the tie-rod end ball joint.

Fig. 162: Disconnecting Tie-Rod End Ball Joint

9. Front Lower Ball Joint knuckle side - Disconnection
    1. Remove the lock pin (A).
    2. Remove the castle nut (B).
    3. Disconnect the lower ball joint (C) from the knuckle.

GETtheMANUALS.org

Fig. 163: Disconnecting Lower Ball Joint From Knuckle

10. Front Knuckle/Hub Assembly
    1. Remove the damper pinch bolts (A) and the self-locking nuts (B).
    2. Pull the knuckle (C) outward, and separate the outboard joint (D) from the front hub, then remove the knuckle/hub.

NOTE: **Do not pull the driveshaft end outward. The inner driveshaft inboard joint may come apart.**

Fig. 164: Pulling Knuckle Outward

11. Front Wheel Hub
    1. Separate the hub (A) from the knuckle (B).

NOTE: **Be careful not to damage or deform the splash guard (C).**

GETtheMANUALS.org

Fig. 165: Separating Hub From Knuckle

2. Press out the wheel bearing inner race (A) of the hub (B).

Fig. 166: Pressing Out Wheel Bearing Inner Race Of Hub

12. Front Splash Guard and Snap Ring
    1. Remove the splash guard (A).
    2. Remove the snap ring (B).

GETtheMANUALS.org

Fig. 167: Identifying Splash Guard And Snap Ring

13. Front Wheel Bearing
    1. Press the wheel bearing (A) out of the knuckle (B).

Fig. 168: Pressing Wheel Bearing Out Of Knuckle

INSTALLATION

NOTE: Refer to the EXPLODED VIEW as needed during the following procedures.

1. Front Wheel Bearing
    1. Wash the knuckle and the hub thoroughly in high flash point solvent before reassembly.
    2. Press a new wheel bearing (A) into the knuckle (B).

NOTE:

- **Install the wheel bearing with the wheel speed sensor magnetic encoder (C) (brown color), toward the inside of the knuckle.**

GETtheMANUALS.org

- **Keep the wheel bearing and magnetic encoder away from any magnetic field. The encoder can be damaged or erased.**

Fig. 169: Pressing Wheel Bearing Into Knuckle

2. Front Splash Guard and Snap Ring
    1. Install the new snap ring (A).
    2. Install the splash guard (B).

Fig. 170: Identifying Splash Guard, Snap Ring And Mounting Bolts With Torque Specification

3. Front Wheel Hub
    1. Install the hub (A) onto the knuckle (B).

GETtheMANUALS.org

NOTE: **Be careful not to damage the splash guard (C).**

Fig. 171: Installing Hub Onto Knuckle

4. Front Knuckle/Hub Assembly
    1. Install the knuckle/hub (A).

NOTE: **Apply grease to the mating surfaces of the wheel bearing and the driveshaft outboard joint.**

Fig. 172: Identifying Knuckle/Hub And Mounting Bolts And Nuts With Torque Specification

5. Front Lower Ball Joint knuckle side - Reconnection
    1. Connect the lower ball joint (A) to the knuckle.
    2. Install the new castle nut (B).

NOTE: **Torque the castle nut to the lower torque specification, then tighten it**

GETtheMANUALS.org

only far enough to align the slot with the ball joint pin hole. Do not align the castle nut by loosening it.

3. Install the lock pin (C) as shown.

Fig. 173: Identifying Lock Pin, Lower Ball Joint And Castle Nut With Torque Specification

6. Tie-Rod End Ball Joint - Reconnection
   1. Connect the tie-rod end ball joint.
   2. Install the nut (A).
   3. Install the cotter pin (B) as shown.

Fig. 174: Identifying Tie-Rod End Ball Joint, Cotter Pin And Nut With Torque Specification

GETtheMANUALS.org

7. Front Brake Disc
    1. Install the brake disc (A).

NOTE: **Before installing the brake disc, clean the mating surfaces between the front hub and the inside of the brake disc.**

Fig. 175: Identifying Brake Disc And Bolts With Torque Specification

8. Driveshaft Spindle Nut, Front Left
    1. Apply a small amount of engine oil to the seating surface of a new spindle nut (A).
    2. Install the spindle nut.
    3. Use a drift to stake the spindle nut shoulder (B) against the driveshaft.

Fig. 176: Identifying Spindle Nut Shoulder And Spindle Nut With Torque Specification

GETtheMANUALS.org

9. Front Wheel Speed Sensor - Move
    1. Install the wheel speed sensor (A).

Fig. 177: Identifying Wheel Speed Sensor And Mounting Bolt With Torque Specification

10. Front Brake Caliper - Reattach
    1. Install the caliper assembly (A).
    2. Install the brake hose mounting bolt (B).

Fig. 178: Identifying Caliper Assembly And Brake Hose Mounting Bolt With Torque Specification

11. Front Wheel
    1. Install the front wheel.

NOTE: Before installing the wheel, clean the mating surfaces between the

GETtheMANUALS.org

brake disc and the inside of the wheel.

Fig. 179: Identifying Front Wheel And Studs With Torque Specification

12. Pre-Alignment Checks

    For proper inspection and adjustment of the wheel alignment, do these checks:

    1. Release the parking brake to avoid an incorrect measurement.
    2. Make sure the suspension is not modified.
    3. Make sure the fuel tank is full, and that the spare tire, the jack, and the tools are in place on the vehicle.
    4. Check the tire size and tire pressure according to tire information.
    5. Set the steering column to the middle tilt position and telescopic position.
13. Caster - Inspection

    Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

    1. Check the caster angle.

       Caster angle:

       2WD:

       With 16 inch wheel: 2 ° 44 '±30 '

       Without 16 inch wheel: 2 ° 50 '±30 '

GETtheMANUALS.org

AWD/4WD:

With 16 inch wheel: 2 ° 38 '±30 '

Without 16 inch wheel: 2 ° 44 '±30 '

- If the measurement is within specifications, measure the front camber angle.
- If the measurement is not within specifications, check for bent or damaged suspension components.

14. Camber - Inspection

Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

1. Check the camber angle.

Camber angle:

2WD:

Front:

With 16 inch wheel: -0 ° 01 '±1 ° 00 '

Without 16 inch wheel: -0 ° 10 '±1 ° 00 '

(Maximum difference between the front right and left side: 1 °00 ')

Rear:

With 16 inch wheel: -1 ° 06 '±45 '

Without 16 inch wheel: -1 ° 12 '±45 '

(Maximum difference between the front right and left side: 0 °45 ')

AWD/4WD:

Front:

With 16 inch wheel: -0 ° 08 '±1 ° 00 '

Without 16 inch wheel: 0 ° 00 '±1 ° 00 '

(Maximum difference between the front right and left side: 1 °00 ')

Rear:

GETtheMANUALS.org

With 16 inch wheel: -0 ° 50 '±45 '

Without 16 inch wheel: -1 ° 00 '±45 '

(Maximum difference between the front right and left side: 0 °45 ')

- If the measurement is within specification, measure the toe-in.
- If the measurement for the front camber is not within the specification, go to front camber adjustment.
- If the measurement for the rear camber is not within the specification, check for bent or damaged suspension components.

15. Front Toe - Inspection

Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

1. Set the steering column to the middle tilt position and telescopic positions.
2. Center the steering wheel spokes, and install a steering wheel holder tool.
3. Check the toe with the wheels pointed straight ahead.

Front toe-in: 0±2 mm (0±0.08 in)

- If adjustment is required, go to the front toe adjustment.
- If no adjustment is required, remove the alignment equipment.

16. Turning Angle - Inspection

Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

1. Turn the wheel right and left while applying the brake, and measure the turning angle of both wheels.

Turning angle:

2WD:

Inward:

With 16 inch wheel: 36 ° 29 '±2 °

Without 16 inch wheel: 36 ° 13 '±2 °

Outward (reference):

With 16 inch wheel: 31 ° 13 '

GETtheMANUALS.org

Without 16 inch wheel: 31 ° 02 '

AWD/4WD:

Inward:

With 16 inch wheel: 36 ° 48 '±2 °

Without 16 inch wheel: 36 ° 30 '±2 °

Outward (reference):

With 16 inch wheel: 31 ° 18 '

Without 16 inch wheel: 31 ° 12 '

Fig. 180: Measuring Wheel Alignment (Caster, Camber, Toe And Turning Angle)

2. If the measurement is not within the specifications, even up both sides of the tie-rod threaded section length while adjusting the front toe.
3. If it is correct, but the turning angle is not within the specifications, check for bent or damaged suspension components.

17. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

GETtheMANUALS.org

Fig. 181: Identifying Data Link Connector (DLC) Located Under Driver's Side Of Dashboard

18. VSA Sensor Neutral Position - Memorization
    1. Park the vehicle on a flat and level surface, with the steering wheel in the straight ahead position.
    2. Select VSA ADJUSTMENT, then select ALL SENSORS with the HDS, and follow the screen prompts.

    NOTE: See the HDS Help menu for specific instructions.

19. Steering Angle Sensor Neutral Position - Clear
    1. Select EPS ADJUSTMENT, then select EPS STEERING ANGLE SENSOR VALUE CLEAR and follow the screen prompts on the HDS.

    NOTE: See the HDS Help menu for specific instructions.

FRONT WHEEL BOLT REMOVAL AND INSTALLATION

SPECIAL TOOL REQUIRED

Image	Description/Tool Number
	Ball Joint Thread Protector, 12 mm 07AAF-

GETtheMANUALS.org

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Front Wheel
    1. Remove the front wheel.

Fig. 182: Identifying Front Wheel And Studs

3. Front Brake Caliper - Detach
    1. Remove the brake hose mounting bolt (A).
    2. Remove the caliper assembly (B).

NOTE:

- **To prevent damage to the caliper assembly or brake hose, use a short piece of wire to hang the caliper assembly from the undercarriage.**
- **Do not twist the brake hose excessively.**

GETtheMANUALS.org

Fig. 183: Identifying Caliper Assembly And Brake Hose Mounting Bolt

4. Front Wheel Speed Sensor - Move
    1. Remove the wheel speed sensor (A).

NOTE: Do not disconnect the wheel speed sensor connector.

Fig. 184: Identifying Wheel Speed Sensor

5. Front Driveshaft Spindle Nut
    1. Pry up the stake (A) on the spindle nut (B).
    2. Remove the spindle nut.

GETtheMANUALS.org

Fig. 185: Identifying Stake And Spindle Nut

6. Front Brake Disc
    1. Remove the brake disc (A).

NOTE: **If the brake disc is stuck to the front hub, thread two 8 x 1.25 mm bolts (B) into the brake disc to push it away from the front hub. Turn each bolt 90 degrees at a time to prevent the brake disc from binding.**

Fig. 186: Identifying Brake Disc And Bolts With Torque Specification

7. Ball Joint - Removal

NOTE: **Always use a ball joint remover to disconnect a ball joint. Do not strike the housing or any other part of the ball joint connection to disconnect it.**

    1. Install a hex nut (A) or the ball joint thread protector.

GETtheMANUALS.org

NOTE: **When using a hex nut, make sure the nut is flush with the ball joint pin end to prevent damage to the threaded end of the ball joint pin.**

Fig. 187: Identifying Hex Nut And Ball Joint Thread Protector

2. Apply grease to the ball joint remover on the areas shown (A).

Fig. 188: Identifying Grease Applying Area On Ball Joint Remover

3. Install the ball joint remover as shown.

NOTE:

- **Fasten the safety tie (A) securely to a suspension arm or the subframe (B).**
- **Making sure not to damage the ball joint boot.**

4. Tighten the pressure bolt until the ball joint pin pops loose from the ball joint connecting hole.

GETtheMANUALS.org

NOTE: **Do not use pneumatic or electric tools on the pressure bolt.**

Fig. 189: Fastening Safety Tie Securely To Suspension Arm Or Subframe

5. Remove the ball joint remover.
6. Remove the hex nut or the ball joint thread protector.
7. Pull the ball joint out of the ball joint connecting hole.

8. Tie-Rod End Ball Joint - Disconnection
    1. Remove the cotter pin (A).
    2. Remove the nut (B).
    3. Disconnect the tie-rod end ball joint.

Fig. 190: Disconnecting Tie-Rod End Ball Joint

GETtheMANUALS.org

9. Front Lower Ball Joint knuckle side - Disconnection
    1. Remove the lock pin (A).
    2. Remove the castle nut (B).
    3. Disconnect the lower ball joint (C) from the knuckle.

Fig. 191: Disconnecting Lower Ball Joint From Knuckle

10. Front Knuckle/Hub Assembly
    1. Remove the damper pinch bolts (A) and the self-locking nuts (B).
    2. Pull the knuckle (C) outward, and separate the outboard joint (D) from the front hub, then remove the knuckle/hub.

NOTE: **Do not pull the driveshaft end outward. The inner driveshaft inboard joint may come apart.**

GETtheMANUALS.org

Fig. 192: Pulling Knuckle Outward

11. Front Wheel Hub
    1. Separate the hub (A) from the knuckle (B).

NOTE: Be careful not to damage or deform the splash guard (C).

Fig. 193: Separating Hub From Knuckle

    2. Press out the wheel bearing inner race (A) of the hub (B).

Fig. 194: Pressing Out Wheel Bearing Inner Race Of Hub

12. Front Splash Guard and Snap Ring
    1. Remove the splash guard (A).
    2. Remove the snap ring (B).

GETtheMANUALS.org

Fig. 195: Identifying Splash Guard And Snap Ring

13. Front Wheel Bearing
    1. Press the wheel bearing (A) out of the knuckle (B).

Fig. 196: Pressing Wheel Bearing Out Of Knuckle

14. LEFT FRONT WHEEL BOLT
    1. Separate the wheel bolt (A) from the hub (B) using a hydraulic press. Support the hub with hydraulic press attachments (C) or equivalent tools.

GETtheMANUALS.org

Fig. 197: Separating Wheel Bolt From Hub Using Hydraulic Press

INSTALLATION

NOTE: **If you cannot tighten the wheel nut to the specified torque when installing the wheel, replace the front hub bearing unit as an assembly.**

1. LEFT FRONT WHEEL BOLT
    1. Insert the new wheel bolt (A) into the hub (B).

    NOTE:
    - **Before installing the new wheel bolt, clean the mating surfaces on the bolt and the hub.**
    - **Degrease the area around the wheel bolt and the threaded section of the nut.**

    2. Adjust the measurement (C) with the washers (P/N 94101-12800 or equivalent) (D).

Fig. 198: Identifying Gap Between Bolt And Hub

    3. Install a nut (P/N 90304-SC2-000 or equivalent) (E) hand-tight.

    NOTE:

GETtheMANUALS.org

- **Make sure the wheel bolt is installed vertically to the hub disc surface.**
- **Do not install the nut and the washers that have been used as tools on a vehicle.**

4. Tighten the nut.

NOTE:

- **Do not exceed the maximum torque limit.**
- **Make sure there is no gap (F) between the bolt and the hub.**

Limited torque: 108 N.m (11.0 kgf.m, 80 lbf.ft) max .

NOTE: **If you cannot tighten the wheel nut to the specified torque when installing the wheel, replace the rear hub bearing unit as an assembly.**

2. Front Wheel Bearing
   1. Wash the knuckle and the hub thoroughly in high flash point solvent before reassembly.
   2. Press a new wheel bearing (A) into the knuckle (B).

NOTE:

- **Install the wheel bearing with the wheel speed sensor magnetic encoder (C) (brown color), toward the inside of the knuckle.**
- **Keep the wheel bearing and magnetic encoder away from any magnetic field. The encoder can be damaged or erased.**

Fig. 199: Pressing Wheel Bearing Into Knuckle

GETtheMANUALS.org

3. Front Splash Guard and Snap Ring
    1. Install the new snap ring (A).
    2. Install the splash guard (B).

Fig. 200: Identifying Splash Guard, Snap Ring And Mounting Bolts With Torque Specification

4. Front Wheel Hub
    1. Install the hub (A) onto the knuckle (B).

NOTE: Be careful not to damage the splash guard (C).

Fig. 201: Installing Hub Onto Knuckle

5. Front Knuckle/Hub Assembly

GETtheMANUALS.org

1. Install the knuckle/hub (A).

NOTE: **Apply grease to the mating surfaces of the wheel bearing and the driveshaft outboard joint.**

Fig. 202: Identifying Knuckle/Hub And Mounting Bolts And Nuts With Torque Specification

6. Front Lower Ball Joint knuckle side - Reconnection
   1. Connect the lower ball joint (A) to the knuckle.
   2. Install the new castle nut (B).

NOTE: **Torque the castle nut to the lower torque specification, then tighten it only far enough to align the slot with the ball joint pin hole. Do not align the castle nut by loosening it.**

   3. Install the lock pin (C) as shown.

GETtheMANUALS.org

Fig. 203: Identifying Lock Pin, Lower Ball Joint And Castle Nut With Torque Specification

7. Tie-Rod End Ball Joint - Reconnection
    1. Connect the tie-rod end ball joint.
    2. Install the nut (A).
    3. Install the cotter pin (B) as shown.

Fig. 204: Identifying Tie-Rod End Ball Joint, Cotter Pin And Nut With Torque Specification

8. Front Brake Disc
    1. Install the brake disc (A).

NOTE: **Before installing the brake disc, clean the mating surfaces between the front hub and the inside of the brake disc.**

Fig. 205: Identifying Brake Disc And Bolts With Torque Specification

9. Driveshaft Spindle Nut, Front Left

GETtheMANUALS.org

1. Apply a small amount of engine oil to the seating surface of a new spindle nut (A).
2. Install the spindle nut.
3. Use a drift to stake the spindle nut shoulder (B) against the driveshaft.

Fig. 206: Identifying Spindle Nut Shoulder And Spindle Nut With Torque Specification

10. Front Wheel Speed Sensor - Move
    1. Install the wheel speed sensor (A).

Fig. 207: Identifying Wheel Speed Sensor And Mounting Bolt With Torque Specification

11. Front Brake Caliper - Reattach

GETtheMANUALS.org

1. Install the caliper assembly (A).
2. Install the brake hose mounting bolt (B).

Fig. 208: Identifying Caliper Assembly And Brake Hose Mounting Bolt With Torque Specification

12. Front Wheel
    1. Install the front wheel.

NOTE: **Before installing the wheel, clean the mating surfaces between the brake disc and the inside of the wheel.**

Fig. 209: Identifying Front Wheel And Studs With Torque Specification

GETtheMANUALS.org

13. Pre-Alignment Checks

    For proper inspection and adjustment of the wheel alignment, do these checks:

    1. Release the parking brake to avoid an incorrect measurement.
    2. Make sure the suspension is not modified.
    3. Make sure the fuel tank is full, and that the spare tire, the jack, and the tools are in place on the vehicle.
    4. Check the tire size and tire pressure according to tire information.
    5. Set the steering column to the middle tilt position and telescopic position.
14. Caster - Inspection

    Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

    1. Check the caster angle.

       Caster angle:

       2WD:

       With 16 inch wheel: 2 ° 44 '±30 '

       Without 16 inch wheel: 2 ° 50 '±30 '

       AWD/4WD:

       With 16 inch wheel: 2 ° 38 '±30 '

       Without 16 inch wheel: 2 ° 44 '±30 '

       - If the measurement is within specifications, measure the front camber angle.
       - If the measurement is not within specifications, check for bent or damaged suspension components.
15. Camber - Inspection

    Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

    1. Check the camber angle.

       Camber angle:

       2WD:

GETtheMANUALS.org

Front:

With 16 inch wheel: -0 ° 01 '±1 ° 00 '

Without 16 inch wheel: -0 ° 10 '±1 ° 00 '

(Maximum difference between the front right and left side: 1 °00 ')

Rear:

With 16 inch wheel: -1 ° 06 '±45 '

Without 16 inch wheel: -1 ° 12 '±45 '

(Maximum difference between the front right and left side: 0 °45 ')

AWD/4WD:

Front:

With 16 inch wheel: -0 ° 08 '±1 ° 00 '

Without 16 inch wheel: 0 ° 00 '±1 ° 00 '

(Maximum difference between the front right and left side: 1 °00 ')

Rear:

With 16 inch wheel: -0 ° 50 '±45 '

Without 16 inch wheel: -1 ° 00 '±45 '

(Maximum difference between the front right and left side: 0 °45 ')

- If the measurement is within specification, measure the toe-in.
- If the measurement for the front camber is not within the specification, go to front camber adjustment.
- If the measurement for the rear camber is not within the specification, check for bent or damaged suspension components.

16. Front Toe - Inspection

Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

1. Set the steering column to the middle tilt position and telescopic positions.
2. Center the steering wheel spokes, and install a steering wheel holder tool.

GETtheMANUALS.org

3. Check the toe with the wheels pointed straight ahead.

   Front toe-in: 0±2 mm (0±0.08 in)

   - If adjustment is required, go to the front toe adjustment.
   - If no adjustment is required, remove the alignment equipment.

17. Turning Angle - Inspection

Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

1. Turn the wheel right and left while applying the brake, and measure the turning angle of both wheels.

   Turning angle:

   2WD:

   Inward:

   With 16 inch wheel: 36 ° 29 '±2 °

   Without 16 inch wheel: 36 ° 13 '±2 °

   Outward (reference):

   With 16 inch wheel: 31 ° 13 '

   Without 16 inch wheel: 31 ° 02 '

   AWD/4WD:

   Inward:

   With 16 inch wheel: 36 ° 48 '±2 °

   Without 16 inch wheel: 36 ° 30 '±2 °

   Outward (reference):

   With 16 inch wheel: 31 ° 18 '

   Without 16 inch wheel: 31 ° 12 '

GETtheMANUALS.org

Fig. 210: Measuring Wheel Alignment (Caster, Camber, Toe And Turning Angle)

2. If the measurement is not within the specifications, even up both sides of the tie-rod threaded section length while adjusting the front toe.
3. If it is correct, but the turning angle is not within the specifications, check for bent or damaged suspension components.

18. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 211: Identifying Data Link Connector (DLC) Located Under Driver's Side Of Dashboard

19. VSA Sensor Neutral Position - Memorization

GETtheMANUALS.org

1. Park the vehicle on a flat and level surface, with the steering wheel in the straight ahead position.
2. Select VSA ADJUSTMENT, then select ALL SENSORS with the HDS, and follow the screen prompts.

NOTE: See the HDS Help menu for specific instructions.

20. Steering Angle Sensor Neutral Position - Clear
    1. Select EPS ADJUSTMENT, then select EPS STEERING ANGLE SENSOR VALUE CLEAR and follow the screen prompts on the HDS.

NOTE: See the HDS Help menu for specific instructions.

WHEEL BEARING END PLAY INSPECTION

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Front Wheel - Both Side
    1. Remove both front wheels.

Fig. 212: Identifying Front Wheel And Studs

3. Rear Wheel - Both Side
    1. Remove both rear wheels.

GETtheMANUALS.org

Fig. 213: Identifying Rear Wheel And Studs

INSPECTION

1. Wheel Bearing End Play - Inspection
    1. Install suitable flat washers (A).

Front

Fig. 214: Measuring Bearing End Play While Moving Brake Disc Inward And Outward (Front)

Rear

GETtheMANUALS.org

Fig. 215: Measuring Bearing End Play While Moving Brake Disc Inward And Outward (Rear)

2. Install the wheel nuts (B).
3. Attach the dial gauge (C).
4. Place the dial gauge against the hub flange.
5. Measure the bearing end play while moving the brake disc inward and outward.

   Wheel bearing end play:

   Front/Rear: 0-0.05 mm (0-0.0020 in)

6. If the bearing end play measurement is more than the standard, replace the wheel bearing or the hub bearing unit.

INSTALLATION

1. Rear Wheel - Both Side
   1. Install both rear wheels.

      NOTE: Before installing the wheel, clean the mating surfaces between the brake disc/drum and the inside of the wheel.

GETtheMANUALS.org

Fig. 216: Identifying Rear Wheels And Studs With Torque Specification

2. Front Wheel - Both Side
    1. Install both front wheels.

NOTE: **Before installing the wheel, clean the mating surfaces between the brake disc and the inside of the wheel.**

A/F SENSOR REMOVAL AND INSTALLATION

SPECIAL TOOLS DESCRIPTION

Image	Description/Tool Number
	O2 Sensor Socket Wrench Snap-on SWR2 or O2 Sensor Wrench Snap-on YA8875, commercially available

REMOVAL

1. A/F Sensor
    1. Remove the A/F sensor (A).

Fig. 1: Identifying A/F Sensor

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. A/F Sensor
    1. Install the A/F sensor (A).

Fig. 2: Identifying A/F Sensor With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

ACCELERATOR PEDAL MODULE REMOVAL AND INSTALLATION

REMOVAL

1. Accelerator Pedal Module
    1. Disconnect the APP sensor connector.
    2. Remove the accelerator pedal module (A).

GETtheMANUALS.org

Fig. 3: Identifying Accelerator Pedal Module
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Accelerator Pedal Module
    1. Install the accelerator pedal module (A).
    2. Connect the APP sensor connector.

Fig. 4: Identifying Accelerator Pedal Module And Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

AIR CLEANER ELEMENT REMOVAL, INSTALLATION, AND INSPECTION

REMOVAL

1. Air Cleaner Element
    1. Open the air cleaner cover (A).
    2. Remove the air cleaner element (B).

GETtheMANUALS.org

Fig. 5: Identifying Air Cleaner Cover And Element
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSPECTION

1. Air Cleaner Element - Inspection
    1. Check the air cleaner element for damage or clogging. If it is damaged or clogged, replace it.

    NOTE: Do not use compressed air to clean the air cleaner element.

    2. Clean and remove any debris from inside the air cleaner.

INSTALLATION

1. Air Cleaner Element
    1. Install the air cleaner element (A).
    2. Close the air cleaner cover (B).

    IF THE IDLE SPEED FLUCTUATES, DO THE IDLE SPEED INSPECTION .

Fig. 6: Identifying Air Cleaner Element And Cleaner Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

AIR CLEANER REMOVAL AND INSTALLATION

REMOVAL

1. Air Cleaner Assembly
    1. Disconnect the MAF sensor/IAT sensor connector (A).
    2. Remove the harness clamp (B).
    3. Disconnect the intake air duct (C) and the intake air pipe (D).
    4. Remove the air cleaner (E).

GETtheMANUALS.org

Fig. 7: Identifying MAF Sensor/IAT Sensor Connector, Harness Clamp, Intake Air Duct, Intake Air Pipe And Cleaner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Air Cleaner Assembly
    1. Install the air cleaner (A).
    2. Connect the intake air pipe (B) and the intake air duct (C).
    3. Install the harness clamp (D).
    4. Connect the MAF sensor/IAT sensor connector (E).

GETtheMANUALS.org

Fig. 8: Identifying MAF Sensor/IAT Sensor Connector, Harness Clamp, Intake Air Duct, Intake Air Pipe And Cleaner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

APP SENSOR SIGNAL INSPECTION

INSPECTION

1. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

GETtheMANUALS.org

Fig. 9: Identifying Data Link Connector (DLC)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. APP Sensor Signal - Inspection

NOTE:

- **This procedure checks the APP sensor in its fully closed position. If it is in any other position, the APP sensor stores DTCs which are covered in other troubleshooting procedures.**
- **Check for Pending or Confirmed DTCs with the HDS before doing this procedure. If any DTCs are indicated, troubleshoot them first, then do this procedure.**
- **Press the accelerator pedal several times to check its operation. If it does not operate smoothly, check the pedal. If you find a problem, replace the accelerator pedal module.**

1. Make sure the accelerator pedal is not pressed, then check the APP SENSOR in the DATA LIST with the HDS.
   - If it is 0 %, the APP sensor is OK.
   - If it is not 0 %, update the PCM if it does not have the latest software, or substitute a known-good PCM, then go to next step.
2. With the accelerator pedal not pressed, check the APP SENSOR in the DATA LIST with the HDS.
   - If it is 0 %, the APP sensor is OK.
   - If it is not 0%, replace the accelerator pedal module, then recheck.

CATALYTIC CONVERTER INSPECTION

SPECIAL TOOLS DESCRIPTION

Image	Description/Tool Number

GETtheMANUALS.org

	O2 Sensor Socket Wrench Snap-on SWR2 or O2 Sensor Wrench Snap-on YA8875, commercially available

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Front Splash Shield
    1. Remove the bolts (A), then remove the clips (B) that secure the front inner fender and the front splash shield (C) to the body.
    2. From under the front bumper (D), remove the clips (E).
    3. From under the body, remove the clips (F), then pull out the front splash shield.

GETtheMANUALS.org

Fig. 10: Identifying Front Bumper, Clips And Front Splash Shield
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Floor Undercover
    1. Remove the bolts (A) and the clips (B, C) securing the front floor undercover (D), then remove the front floor undercover.

GETtheMANUALS.org

Fig. 11: Identifying Front Floor Undercover, Clips And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Both Windshield Wiper Arm Assemblies

NOTE: Set the wiper arms to the auto-stop position before removal.

1. Remove the caps (A) and nuts (B).
2. Remove the wiper arms (C).

GETtheMANUALS.org

Fig. 12: Identifying Wiper Arms, Caps And Nuts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Front Fender Trim - Both Sides

NOTE: Repeat on the opposite side.

1. Remove the clips (A, B).
2. Pull up the front fender trim (C) by hand to detach the clips (D), then remove the trim.

Fig. 13: Identifying Front Fender Trim And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Cowl Top Cover - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Remove the clip (A).
2. Pull out the hood rear seal (B).
3. Detach the hooks, and remove the cowl top cover (C).

GETtheMANUALS.org

Fig. 14: Identifying Cowl Top Cover, Hood Rear Seal And Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Side Cowl Cover - Both Sides

NOTE: Repeat on the opposite side.

1. Detach the hook (A) at the inside of the cowl cover (B).
2. Release the hooks (C) from the cowl cover and the front fender (D), then remove the side cowl cover (E).
3. Right side; Detach the windshield washer tube.

GETtheMANUALS.org

Fig. 15: Releasing Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Center Cowl Cover
    1. Remove the clips (A).
    2. Carefully pull the center cowl cover (B) forward to release the hooks (C) from the windshield and the body.

GETtheMANUALS.org

Fig. 16: Identifying Center Cowl Cover, Hooks And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Under-Cowl Panel
    1. Disconnect the connector (A).
    2. Remove the bolts and the nuts, then remove the under-cowl panel (B).
    3. Remove the wire harness (C) from the under-cowl panel.

GETtheMANUALS.org

Fig. 17: Identifying Connector, Under-Cowl Panel And Wire Harness
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. A/F Sensor
    1. Remove the A/F sensor (A).

Fig. 18: Identifying A/F Sensor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Exhaust Chamber Cover
    1. Remove the exhaust chamber cover (A).

Fig. 19: Identifying Exhaust Chamber Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

12. WU-TWC
    1. Separate the lower side of the WU-TWC (A) from the under-floor TWC (B).

Fig. 20: Identifying WU-TWC And Under-Floor WU-TWC
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the WU-TWC (C).
    3. Remove the WU-TWC cover (D).

Fig. 21: Identifying WU-TWC Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

13. Secondary HO2S
    1. Remove the secondary HO2S (A).

Fig. 22: Identifying Secondary HO2S
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Under-Floor TWC
    1. Remove the under-floor TWC (A).

Fig. 23: Identifying Under-Floor TWC

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSPECTION

1. Catalytic Converter - Inspection
    1. If excessive exhaust system back-pressure is suspected, remove the WU-TWC and TWC from the vehicle. Using a flashlight (A), make a visual check for plugging, melting or cracking of the catalyst. Replace the TWC if any of the visible area is damaged or plugged.

WU-TWC

Fig. 24: Checking For Plugging, Melting Or Cracking Of Catalyst (WU-TWC)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TWC

GETtheMANUALS.org

Fig. 25: Checking For Plugging, Melting Or Cracking Of Catalyst (TWC)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Under-Floor TWC
    1. Install the under-floor TWC (A) with new gaskets (B).

GETtheMANUALS.org

Fig. 26: Identifying Under-Floor TWC And Gaskets
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Secondary HO2S
    1. Install the secondary HO2S (A).

GETtheMANUALS.org

Fig. 27: Identifying Secondary HO2S With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. WU-TWC
    1. Install the upper side of the WU-TWC (A) with a new gasket (B).
    2. Install the WU-TWC cover (C).

Fig. 28: Identifying WU-TWC Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

3. Install the lower side of the WU-TWC with a new gasket (A).

Fig. 29: Identifying WU-TWC And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Exhaust Chamber Cover
    1. Install the exhaust chamber cover (A).

Fig. 30: Identifying Exhaust Chamber Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. A/F Sensor

GETtheMANUALS.org

1. Install the A/F sensor (A).

Fig. 31: Identifying A/F Sensor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Under-Cowl Panel
    1. Install the under-cowl panel (A), then install the bolts and the nuts.
    2. Install the wire harness (B) to the under-cowl panel.
    3. Connect the connector (C).

Fig. 32: Identifying Under-Cowl Panel, Wire Harness And Connector

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Center Cowl Cover
    1. Install the center cowl cover (A). Make sure the clips (B) and the hooks (C) snap into place securely.

Fig. 33: Identifying Center Cowl Cover, Clips And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Side Cowl Cover - Both Sides

NOTE: Repeat on the opposite side.

1. Install the side cowl cover (A). Make sure the hooks (B) snap into place securely.
2. Right side; Install the windshield washer tube.

GETtheMANUALS.org

Fig. 34: Identifying Side Cowl Cover And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Cowl Top Cover - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Install the cowl top cover (A).
2. Install the hood rear seal (B).
3. Install the clip (C).

GETtheMANUALS.org

Fig. 35: Identifying Cowl Top Cover, Hood Rear Seal And Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Front Fender Trim - Both Sides

NOTE: Repeat on the opposite side.

1. Install the front fender trim (A), then install the clips (B, C). Make sure the clips (D) snap into place securely.

GETtheMANUALS.org

Fig. 36: Identifying Front Fender Trim And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Both Windshield Wiper Arm Assemblies

NOTE: Set the wiper arms to the auto-stop position before installation.

1. Install the wiper arms (A), the nut (B), and the caps (C).

Fig. 37: Identifying Wiper Arms, Nuts And Caps

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Front Floor Undercover
    1. Install the front floor undercover (A), then install the bolts (B) and the clips (C, D). Make sure the clips snap into place securely.

Fig. 38: Identifying Front Floor Undercover, Bolts And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Front Splash Shield
    1. Install the front splash shield (A), then install the bolts (B) and the clips (C, D). Make sure the clips snap into place securely.

GETtheMANUALS.org

CKP SENSOR REMOVAL AND INSTALLATION

REMOVAL

1. Vehicle Lift

GETtheMANUALS.org

1. Raise the vehicle on a lift, and make sure it is securely supported.

2. Front Splash Shield
    1. Remove the bolts (A), then remove the clips (B) that secure the front inner fender and the front splash shield (C) to the body.
    2. From under the front bumper (D), remove the clips (E).
    3. From under the body, remove the clips (F), then pull out the front splash shield.

Fig. 41: Identifying Front Bumper, Clips And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. CKP Sensor
    1. Remove the CKP sensor cover (A).
    2. Remove the CKP sensor (B).

GETtheMANUALS.org

Fig. 42: Identifying CKP Sensor And Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. CKP Sensor
    1. Install the CKP sensor (A) with a new O-ring (B).
    2. Install the CKP sensor cover (C).

GETtheMANUALS.org

Fig. 43: Identifying CKP Sensor, Cover And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Splash Shield
    1. Install the front splash shield (A), then install the bolts (B) and the clips (C, D). Make sure the clips snap into place securely.

GETtheMANUALS.org

Fig. 44: Identifying Front Splash Shield, Bolts And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

GETtheMANUALS.org

Fig. 45: Identifying Data Link Connector (DLC)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. CKP Pattern - Clear/Learn
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.
    4. Select CRANK PATTERN in the ADJUSTMENT MENU with the HDS.
    5. Select CRANK PATTERN CLEAR, and clear the CKP pattern.
    6. Select CRANK PATTERN LEARNING with the HDS, and follow the screen prompts.
    7. After learning, turn the ignition switch to LOCK (0).
    8. Disconnect the HDS from the DLC.

GETtheMANUALS.org

Fig. 46: Identifying Data Link Connector (DLC)

CMP PULSE PLATE A REMOVAL AND INSTALLATION

REMOVAL

1. Ignition Coil Cover
    1. Remove the ignition coil cover.

Fig. 47: Identifying Ignition Coil Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Ignition Coil
    1. Remove the ignition coils.

GETtheMANUALS.org

Fig. 48: Identifying Ignition Coils
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Cylinder Head Cover
    1. Remove the dipstick (A).
    2. Disconnect the breather hose (B).
    3. Remove the two bolts (C).

Fig. 49: Identifying Dipstick, Breather Hose And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the cylinder head cover.

GETtheMANUALS.org

Fig. 50: Identifying Cylinder Head Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. CMP Pulse Plate A
    1. Hold the camshaft with an open-end wrench, then loosen the bolt.

Fig. 51: Holding Camshaft Using Open-End Wrench
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove CMP pulse plate A.

GETtheMANUALS.org

Fig. 52: Identifying CMP Pulse Plate A
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. CMP Pulse Plate A
    1. Apply new engine oil to the bolt threads.
    2. Install CMP pulse plate A.

Fig. 53: Identifying CMP Pulse Plate A
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. Hold the camshaft with an open-end wrench, then tighten the bolt.

GETtheMANUALS.org

Fig. 54: Holding Camshaft Using Open-End Wrench
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Cylinder Head Cover
    1. Check the spark plug seals for damage. If any seals are damaged, replace it.
    2. Thoroughly clean the head cover gasket and the groove.

    NOTE: Check and, if necessary, replace the head cover gasket.

    3. Install the head cover gasket (A) in the groove of the cylinder head cover (B). Make sure the head cover gasket is seated securely.

Fig. 55: Identifying Cylinder Head Cover And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    4. Remove all of the old liquid gasket from the chain case and the No. 5 rocker shaft holder.

GETtheMANUALS.org

5. Clean the head cover contacting surfaces with a shop towel.
6. Apply liquid gasket, (P/N 08718-0004 or 08718-0009) on the chain case and the No. 5 rocker shaft holder mating areas (A). Install the component within 5 minutes of applying the liquid gasket.

NOTE: **If too much time has passed after applying the liquid gasket, remove the old liquid gasket and residue, then reapply new liquid gasket.**

Fig. 56: Identifying No. 5 Rocker Shaft Holder Mating Areas
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Set the spark plug seals (A) on the spark plug tubes. Place the cylinder head cover (B) on the cylinder head, then slide the cover slightly back and forth to seat the head cover gasket.
8. Inspect the spark plug seals for damage.
9. Inspect the cover washers (C). Replace any washer that is damaged or deteriorated.

Fig. 57: Identifying Spark Plug Seals, Cylinder Head Cover And Washers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

10. Tighten the bolts in two steps. In the final step torque bolts, in sequence, to 12 N.m (1.2 kgf.m, 9 lbf.ft).

NOTE:

- **Wait at least 30 minutes before filling the engine with oil.**
- **Do not run the engine for at least 3 hours after installing the head cover.**

Fig. 58: Cylinder Head Cover Bolts Tightening Sequence
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Install the two bolts (A).
12. Connect the breather hose (B).
13. Install the dipstick (C).

Fig. 59: Identifying Breather Hose, Bolts And Dipstick

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Ignition Coil
    1. Install the ignition coils.

Fig. 60: Identifying Ignition Coil
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Ignition Coil Cover
    1. Install the ignition coil cover.

Fig. 61: Identifying Ignition Coil Cover

GETtheMANUALS.org

4. Engine Wire Harness
    1. Remove the engine wire harness.

Fig. 90: Identifying Engine Wire Harness
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. A/T Intermediate Shaft Assembly
    1. Remove the flange bolt (A) and the two dowel bolts (B).

GETtheMANUALS.org

Fig. 91: Identifying Flange Bolt And Dowel Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the intermediate shaft (A) from the differential. Hold the intermediate shaft horizontal until it is clear of the differential to prevent damaging the oil seal (B).

Fig. 92: Identifying Intermediate Shaft And Oil Seal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Automatic Transmission Assembly (After Removal Engine)
    1. Remove the torque converter cover (A).
    2. Remove the torque converter bolts (B) (8 bolts) while rotating the crankshaft pulley.

GETtheMANUALS.org

Fig. 93: Identifying Torque Converter Cover And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the automatic transmission.

Fig. 94: Identifying Automatic Transmission
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Drive Plate Assembly
    1. Remove the drive plate (A) and the washer (B).

GETtheMANUALS.org

Fig. 95: Identifying Drive Plate And Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Intake Manifold and Throttle Body Assembly
    1. Remove the intake manifold lower bracket.

Fig. 96: Identifying Intake Manifold Lower Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the intake manifold with the throttle body.

GETtheMANUALS.org

Fig. 97: Identifying Intake Manifold With Throttle Body
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Fuel Injector and Rail Assembly
    1. Remove the rail with the fuel injector.

Fig. 98: Identifying Rail With Fuel Injector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Injector Base Assembly
    1. Remove the injector base (A).

GETtheMANUALS.org

Fig. 99: Identifying Injector Base
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Water Passage Assembly
    1. Remove the water passage.

Fig. 100: Identifying Water Passage
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. A/F Sensor
    1. Remove the A/F sensor.

GETtheMANUALS.org

Fig. 101: Identifying A/F Sensor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Warm Up TWC
    1. Remove the exhaust chamber cover (A).
    2. Remove the warm up TWC (B).

Fig. 102: Identifying Exhaust Chamber Cover And TWC
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

14. Ignition Coil
    1. Remove the ignition coils.

Fig. 103: Identifying Ignition Coils
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Cylinder Head Cover
    1. Remove the dipstick (A).
    2. Disconnect the breather hose (B).
    3. Remove the two bolts (C).

Fig. 104: Identifying Dipstick, Breather Hose And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    4. Remove the cylinder head cover.

GETtheMANUALS.org

Fig. 105: Identifying Cylinder Head Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Set The Crankshaft To Top Dead Center
    1. Turn the crankshaft so its white mark (A) lines up with the pointer (B).

NOTE: The other pointer (C) is not used.

Fig. 106: Identifying White Mark And Pointer On Crankshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Set The No. 1 Piston at Top Dead Center (With Cam Chain Case/Oil Pump)
    1. Set the No. 1 piston at top dead center (TDC). The punch mark (A) on the VTC actuator and the punch mark (B) on the exhaust camshaft sprocket should be at the top. Align the TDC marks (C) on the VTC actuator and the exhaust camshaft sprocket.

GETtheMANUALS.org

Fig. 107: Identifying Punch Marks On VTC Actuator And Exhaust Camshaft Sprocket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. VTC Oil Control Solenoid Valve
    1. Remove the VTC oil control solenoid valve.

Fig. 108: Identifying VTC Oil Control Solenoid Valve O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Crankshaft Pulley
    1. Hold the pulley with the holder handle (A) and the crankshaft pulley holder (B).
    2. Remove the bolt with a socket, 19 mm (C) and a breaker bar, then remove the crankshaft pulley.

GETtheMANUALS.org

Fig. 109: Removing Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Oil Pan Assembly (Without Transmission)
    1. Remove the bolts securing the oil pan.
    2. Using a flat blade screwdriver, separate the oil pan from the engine block in the places shown.

Fig. 110: Locating Areas For Separating Oil Pan
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. Remove the oil pan.

GETtheMANUALS.org

Fig. 111: Identifying Oil Pan
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Side Engine Mount Bracket, Engine Side
    1. Remove the side engine mount bracket.

Fig. 112: Identifying Side Engine Mount Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Cam Chain Case
    1. Remove the cam chain case (A) and the spacer (B).

GETtheMANUALS.org

Fig. 113: Identifying Cam Chain Case And Spacer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. Cam Chain Auto-Tensioner
    1. Loosely install the crankshaft pulley.
    2. Turn the crankshaft counterclockwise to compress the auto-tensioner.

Fig. 114: Turning Crankshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. Rotate the crankshaft counterclockwise to align the holes on the lock (A) and the auto-tensioner (B), then insert a 1.2 mm (3/64 in) diameter pin (C) into the holes. Turn the crankshaft clockwise to secure the pin.

NOTE: **If the holes in the lock and the auto-tensioner do not align, continue**

GETtheMANUALS.org

to rotating the crankshaft counterclockwise until the holes align, then install the pin.

Fig. 115: Inserting Pin Of 1.2 mm Diameter
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the auto-tensioner.

Fig. 116: Identifying Auto-Tensioner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

24. Cam Chain Tensioner Arm and Cam Chain Guide
    1. Remove cam chain guide B.

GETtheMANUALS.org

Fig. 117: Identifying Cam Chain Guide
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove cam chain guide A and the tensioner arm (B).

Fig. 118: Identifying Cam Chain Guide And Tensioner Arm
Courtesy of AMERICAN HONDA MOTOR CO., INC.

25. Cam Chain
    1. Remove the cam chain.
26. Camshaft Holder
    1. Loosen the rocker arm and the adjusting screws (A).

GETtheMANUALS.org

Fig. 119: Identifying Adjusting Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the camshaft holder bolts. To prevent damaging the camshafts, loosen the bolts, in sequence, two turns at a time.

Fig. 120: Camshaft Holder Bolts Removing Order
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove cam chain guide B, the camshaft holders (A).

GETtheMANUALS.org

Fig. 121: Identifying Camshaft Holders And Cam Chain Guide
Courtesy of AMERICAN HONDA MOTOR CO., INC.

27. Camshaft
    1. Carefully tip up the intake camshaft on the transmission side of the engine until there is enough slack in the chain to lift the chain off of the VTC actuator's teeth.
    2. Remove the intake camshaft and the exhaust camshaft while keeping some tension on the cam chain.
    3. Secure the cam chain to the A/C compressor suction hose with a wire tie to prevent the chain from falling down into the chain case.

GETtheMANUALS.org

Fig. 122: Identifying Intake Camshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

28. Rocker Arm Assembly
    1. Insert the bolts (A) into the rocker shaft holder, then remove the rocker arm assembly (B).

Fig. 123: Identifying Rocker Arm Assembly And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

29. Cylinder Head Assembly
    1. Remove the cylinder head bolts. To prevent warpage, loosen the bolts in sequence 1/3 turn at a time; repeat the sequence until all bolts are loosened.
    2. Remove the cylinder head.

Fig. 124: Cylinder Head Bolts Removing Order

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

30. Oil Pump Chain Tensioner
    1. Loosely install the crankshaft pulley.
    2. To hold the rear balancer shaft, insert a 6 mm long pin punch (A) into the maintenance hole in the balancer shaft holder and through the rear balancer shaft.
    3. Turn the crankshaft counterclockwise to compress the oil pump chain auto-tensioner.
    4. Remove the crankshaft pulley.

Fig. 125: Turning Crankshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Align the holes on the lock (A) and the oil pump chain auto-tensioner (B), then insert a 3.0 mm (7/64 in) diameter pin (C) into the holes. Turn the crankshaft clockwise to secure the pin.

Fig. 126: Inserting Pin Into Holes
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Use a transmission jack to lift the transmission 30-40 mm (1.18 -1.57 in), then remove the oil pump chain auto-tensioner.

GETtheMANUALS.org

Fig. 127: Identifying Oil Pump Chain Auto-Tensioner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

31. Engine Oil Pump Assembly
    1. Loosen the oil pump sprocket mounting bolt.

Fig. 128: Loosening Oil Pump Sprocket Mounting Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the oil pump sprocket (A) and the oil pump chain guide (B).
    3. Remove the oil pump chain (C).

GETtheMANUALS.org

Fig. 129: Identifying Oil Pump Sprocket, Chain Guide And Pump Chain
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the oil pump.

Fig. 130: Identifying Oil Pump
Courtesy of AMERICAN HONDA MOTOR CO., INC.

32. Engine Baffle Plate
    1. Remove the baffle plate.

GETtheMANUALS.org

Fig. 131: Identifying Baffle Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

33. Connecting Rod Caps/Bearing Halves
    1. Remove the connecting rod caps/bearing. Keep all connecting rod caps/bearing halves in order.

Fig. 132: Identifying Connecting Rod Caps/Bearing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

34. Cylinder Lower Block Assembly
    1. Remove the 8 mm bolts.

GETtheMANUALS.org

Fig. 133: Cylinder Lower Block Assembly Bolts Removing Order
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the bearing cap bolts. To prevent warpage, loosen the bolts in sequence 1/3 turn at a time; repeat the sequence until all bolts are loosened.

Fig. 134: Bearing Cap Bolts Removing Order
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the lower block and the bearings. Keep all the bearings in order.

GETtheMANUALS.org

Fig. 135: Identifying Lower Block And Bearings
Courtesy of AMERICAN HONDA MOTOR CO., INC.

35. Crankshaft
    1. Remove the crankshaft.

Fig. 136: Identifying Crankshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

36. Crankshaft Oil Seal Transmission Side
    1. Remove the crankshaft oil seal.

GETtheMANUALS.org

Fig. 137: Identifying Crankshaft Oil Seal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

37. CKP Pulse Plate
    1. Remove the CKP pulse plate.

Fig. 138: Identifying CKP Pulse Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSPECTION

1. Crankshaft - Inspection
    1. Clean the crankshaft oil passages with pipe cleaners or a suitable brush.

GETtheMANUALS.org

Fig. 139: Identifying Crankshaft Oil Passages
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Check the keyway slot and the threaded holes for damage.
3. Measure the out-of-round at the middle of each rod and the main journal in two places. The difference between measurements on each journal must not be more than the service limit.

   Journal Out-of-Round

   Standard (New): 0.004 mm (0.00016 in) max .

   Service Limit: 0.010 mm (0.00039 in)

4. Measure the taper at the edges of each rod and the main journal. The difference between measurements on each journal must not be more than the service limit.

   Journal Taper

   Standard (New): 0.005 mm (0.00020 in) max .

   Service Limit: 0.010 mm (0.00039 in)

5. Place the V-blocks on a flat surface.

GETtheMANUALS.org

Fig. 140: Checking Crankshaft Runout
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Check the total runout with the crankshaft supported on V-blocks.
7. Measure the runout on all of the main journals. Rotate the crankshaft two complete revolutions. The difference between measurements on each journal must not be more than the service limit.

Crankshaft Total Runout

Standard (New): 0.03 mm (0.0012 in) max .

INSTALLATION

1. CKP Pulse Plate
    1. Install the CKP pulse plate.

Fig. 141: Identifying CKP Pulse Plate And Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Crankshaft
    1. Hold the crankshaft so rod journal No. 2 and rod journal No. 3 are straight up, and lower the crankshaft into the engine block. Be careful not to damage the journals and the CKP pulse plate.

GETtheMANUALS.org

Fig. 142: Identifying Crankshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Crankshaft Main Bearing Clearance - Inspection
    1. Clean each main journal and the bearing half with a clean shop towel.
    2. Place one strip of plastigage across each main journal.
    3. Reinstall the main bearings and the lower block, then torque the bolts to 30 N.m (3.1 kgf.m, 22 lbf.ft).

NOTE:

- **Apply new engine oil to the bolt threads and flanges.**
- **Do not rotate the crankshaft during inspection.**

    4. Tighten the bearing cap bolts an additional 48 °.

Fig. 143: Bearing Cap Bolts Tightening Sequence

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the lower block and the main bearings again, and measure the widest part of the plastigage.

   Main Bearing-to-Journal Oil Clearance No. 1, 2, 4, 5 Journals:

   Standard (New): 0.017-0.041 mm (0.00067-0.00161 in)

   Service Limit: 0.050 mm (0.00197 in)

   No. 3 Journal:

   Standard (New): 0.025-0.049 mm (0.00098-0.00193 in)

   Service Limit: 0.055 mm (0.00217 in)

Fig. 144: Measuring Widest Part Of Plastigage
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Crankshaft Main Bearing - Selection
   1. Numbers, letters, or bars have been stamped on the end of the lower block as a code for the size of each of the five main journal bores. Write down the block bore codes. If you cannot read the codes because of accumulated dirt and dust, do not scrub them with a wire brush or scraper. Clean them only with solvent or detergent.

GETtheMANUALS.org

Fig. 145: Identifying Number Stamped On End Of Lower Block
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. The main journal codes are stamped on the crankshaft.

Fig. 146: Identifying Main Journal Codes (Stamped On Crankshaft)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

Fig. 147: Identifying Main Journal Codes (Stamped On Crankshaft)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Use the block bore codes and the main journal codes to select the appropriate replacement bearings from the following table.

NOTE:

- **Color code is on the edge of the bearing.**
- **When using bearing halves of different colors, it does not matter which color is used in the top or bottom.**

Crank bore code → Larger block bore

Main journal code	1 or A or I	2 or B or II	3 or C or III	4 or D or IIII
1	Red	Red/ Pink	Pink	Yellow
2	Red/ Pink	Pink	Yellow	Yellow/ Green
3	Pink	Yellow	Yellow/ Green	Green
4	Yellow	Yellow/ Green	Green	Brown
5	Yellow/ Green	Green	Brown	Brown/ Black
6	Green	Brown	Brown/ Black	Black

Smaller bearing (Thicker)

Smaller main journal ↓ Smaller bearing (Thicker) ↓

Fig. 148: Block Bore Codes And Main Journal Codes Chart
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Cylinder Lower Block Assembly

GETtheMANUALS.org

1. Remove all of the old liquid gasket from the lower block mating surfaces, the bolts, and the bolt holes.
2. Clean and dry the lower block mating surfaces.
3. Apply liquid gasket (P/N 08718-0004 or 08718-0009) to the engine block mating surface of the lower block and to the inside edge of the threaded bolt holes. Install the component within 5 minutes of applying the liquid gasket.

NOTE:

- **Apply a 2.5 mm (0.098 in) diameter bead of liquid gasket along the broken line (A).**
- **If too much time has passed after applying the liquid gasket, remove the old liquid gasket and residue, then reapply new liquid gasket.**

Fig. 149: Identifying Broken Line
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Put the lower block on the engine block.
5. Apply new engine oil to the threads of the bearing cap bolts. Torque the bearing cap bolts in sequence, to 30 N.m (3.1 kgf.m, 22 lbf.ft).

GETtheMANUALS.org

Fig. 150: Bearing Cap Bolts Tightening Sequence
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Tighten the bearing cap bolts an additional 48 °.

Fig. 151: Identifying Bearing Cap Bolts Tightening Angle
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Torque the 8 mm bolts in sequence to 22 N.m (2.2 kgf.m, 16 lbf.ft).

NOTE:

- **Wait at least 30 minutes before filling the engine with oil.**
- **Do not run the engine for at least 3 hours after installing the lower block.**

GETtheMANUALS.org

Fig. 152: Bearing Cap Bolts Tightening Sequence
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Connecting Rod Bearing Clearance - Inspection
    1. Clean the connecting rod journal and the bearing half with a clean shop towel.
    2. Place plastigage across the connecting rod journal.
    3. Reinstall the bearing half and the connecting rod cap, then torque the bolts to 41 N.m (4.2 kgf.m, 30 lbf.ft) + 120 °.

    NOTE:
    - **Apply new engine oil to the bolt threads and flanges.**
    - **Do not rotate the crankshaft during inspection.**

    4. Remove the connecting rod cap and the bearing half, and measure the widest part of the plastigage.

    Connecting Rod Bearing-to-Journal Oil Clearance

    Standard (New): 0.032-0.066 mm (0.00126-0.00260 in)

    Service Limit: 0.077 mm (0.00303 in)

GETtheMANUALS.org

Fig. 153: Measuring Widest Part Of Plastigage
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. If the plastigage measures too wide or too narrow, remove the cap, and the upper half of the bearing. Install a new, complete bearing with the appropriate color code(s), and recheck the clearance. Do not file, shim, or scrape the bearings or the caps to adjust clearance.
6. If the plastigage shows the clearance is still incorrect, try the next larger or smaller bearing (the color listed above or below the current one), and check the clearance again. If the proper clearance cannot be obtained by using the appropriate larger or smaller bearings, replace the crankshaft and start over.

7. Connecting Rod Bearing - Selection
   1. Each connecting rod has a tolerance range from 0 to 0.024 mm (0.00094 in), in 0.006 mm (0.00024 in) increments, depending on the size of its big end bore. It's then stamped with a number or bar (1, 2, 3, or 4/l, ll, lll, or llll) indicating the range. You may find any combination of numbers and bars in any engine. (Half the number or bar is stamped on the rod cap, the other half is on the connecting rod.) If you cannot read the code because of an accumulation of oil and varnish, do not scrub it with a wire brush or scraper. Clean it only with solvent or detergent.

Fig. 154: Identifying Number Stamped On Connecting Rod
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

2. The connecting rod journal codes are stamped on the crankshaft in either location.

Fig. 155: Identifying Connecting Rod Journal Codes (Stamped On Crankshaft)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 156: Identifying Connecting Rod Journal Codes (Stamped On Crankshaft)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Use the big end bore codes and the rod journal codes to select appropriate replacement bearings from the following table.

NOTE:

- **Color code is on the edge of the bearing.**
- **When using bearing halves of different colors, it does not matter which color is used in the top or bottom.**

GETtheMANUALS.org

Fig. 157: Big End Bore Codes And Rod Journal Codes Chart
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Connecting Rod Bolt - Inspection
    1. Measure the diameter of each connecting rod bolt at point A and point B.

Fig. 158: Identifying Diameter Of Connecting Rod Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Calculate the difference in diameter between point A and point B.

Point A-Point B = Difference in Diameter

Difference in Diameter

GETtheMANUALS.org

Specification: 0-0.1 mm (0-0.004 in)

3. If the difference in diameter is out of specification, replace the connecting rod bolt.

9. Connecting Rod Caps/Bearing Halves
   1. Apply new engine oil to the threads of the connecting rod bolts.
   2. Seat the rod journals into connecting rod No. 1 and connecting rod No. 4. Line up the mark (A) on the connecting rod and the bearing cap.
   3. Install the bearing caps and the bolts finger-tight.
   4. Rotate the crankshaft clockwise, and seat the journals into connecting rod No. 2 and connecting rod No. 3. Line up the mark on the connecting rod and the bearing cap.
   5. Install the bearing caps and the bolts finger-tight.

Fig. 159: Identifying Mark On Connecting Rod And Bearing Cap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Torque the bolts to 41 N.m (4.2 kgf.m, 30 lbf.ft).
7. Tighten the connecting rod bolts an additional 120 °.

NOTE: **Remove the connecting rod bolt if you tightened it beyond the specified angle, inspect the connecting rod bolts. Do not loosen it back to the specified angle.**

GETtheMANUALS.org

Fig. 160: Identifying Tightening Angle Of Connecting Rod Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Crankshaft Oil Seal Transmission Side
    1. Clean and dry the crankshaft oil seal housing.
    2. Apply a light coat of new engine oil to the lip of the crankshaft oil seal.
    3. Use the driver handle, 15 x 135L and the oil seal driver attachment, 96 mm to drive a new crankshaft oil seal (A) squarely into the engine block to the specified installed height.
    4. Clean the excess oil off the crankshaft, and check that the oil seal lip is not distorted.

Fig. 161: Installing Crankshaft Oil Seal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    5. Measure the distance between the engine block (A) and the crankshaft oil seal (B).

GETtheMANUALS.org

Oil Seal Installed Height: 0.2-1.2 mm (0.008-0.047 in)

Fig. 162: Identifying Distance Between Engine Block And Crankshaft Oil Seal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Engine Baffle Plate
    1. Install the baffle plate.

Fig. 163: Identifying Baffle Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Set The Crankshaft To Top Dead Center
    1. Set the crankshaft to top dead center (TDC). Align the TDC mark (A) on the crankshaft sprocket with the pointer (B) on the engine block.

GETtheMANUALS.org

Fig. 164: Identifying TDC Mark On Crankshaft Sprocket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Engine Oil Pump Assembly
    1. Align the dowel pin (A) on the rear balancer shaft with the mark (B) on the oil pump.

Fig. 165: Identifying Dowel Pin And Mark On Rear Balancer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. To hold the rear balancer shaft, insert a 6 mm long pin punch (Snap-on PPC108LA or equivalent) (A) into the maintenance hole in the balancer shaft holder and through the rear balancer shaft.

GETtheMANUALS.org

Fig. 166: Holding Rear Balancer Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Set the oil pump chain on the oil pump chain sprocket (A) with the punch mark (B) aligned with the center of the two colored link plates (C), then install the oil pump chain sprocket to the oil pump.

7. Apply new engine oil to the threads of the oil pump sprocket mounting bolt (D), then install the oil pump sprocket mounting bolt.

8. Install the oil pump chain guide (E).

9. Remove the 6 mm long pin punch (F).

Fig. 167: Identifying Oil Pump Chain Sprocket And Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Oil Pump Chain Tensioner

2. Install the oil pump chain tensioner, then remove the 3.0 mm (7/64 in) diameter pin.

GETtheMANUALS.org

Fig. 168: Identifying Oil Pump Chain Tensioner Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Coolant Separator
    1. Install a new coolant separator (A) in the engine block whenever the engine block is replaced.

Fig. 169: Identifying Coolant Separator
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Cylinder Head Assembly
    1. Clean the cylinder head and the engine block surface.
    2. Install the new cylinder head gasket (A) and the dowel pins (B) on the engine block. Always use a new cylinder head gasket.
    3. Install the cylinder head on the engine block.

GETtheMANUALS.org

Fig. 170: Identifying Cylinder Head Gasket And Dowel Pins
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Measure the diameter of each cylinder head bolt at point A and point B.
5. If either diameter is less than 10.6 mm (0.417 in), replace the cylinder head bolt.
6. Apply new engine oil to the threads and under the bolt heads of all cylinder head bolts.

Fig. 171: Identifying Cylinder Head Bolt Diameter
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Torque the cylinder head bolts in sequence to 39 N.m (4.0 kgf.m, 29 lbf.ft). Use a beam-type torque wrench. When using a preset click-type torque wrench, be sure to tighten slowly and do not overtighten. If a bolt makes any noise while you are torquing it, loosen the bolt and retighten it from the first step.

GETtheMANUALS.org

Fig. 172: Cylinder Head Bolts Tightening Sequence
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. After torquing, tighten all cylinder head bolts in two steps (90 ° per step) using the sequence shown in step 9. If you are using a new cylinder head bolt, tighten the bolt an extra 90 °.

NOTE: **Remove the cylinder head bolt if you tightened it beyond the specified angle, and go back to step 6 of the procedure. Do not loosen it back to the specified angle.**

Fig. 173: Tightening Of Cylinder Head Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Rocker Arm Assembly
    1. Clean and dry the No. 5 rocker shaft holder mating surface.
    2. Apply liquid gasket (P/N 08718-0004 or 08718-0009) to the cylinder head mating surface of the No. 5 rocker shaft holder and to the inside edge of the threaded bolt holes. Install the component within 5 minutes of applying the liquid gasket.

NOTE:

- **Apply a 2.5 mm (0.098 in) diameter bead of liquid gasket along the broken line (A).**

GETtheMANUALS.org

- **If too much time has passed after applying the liquid gasket, remove the old liquid gasket and residue, then reapply new liquid gasket.**

Fig. 174: Identifying Broken Line Of Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the lost motion assembly in the cylinder head.

NOTE: Apply new engine oil to the lost motion assembly.

4. Insert the bolts (A) into the rocker shaft holder, then install the rocker arm assembly (B) on the cylinder head.
5. Remove the bolts from the rocker shaft holder.

Fig. 175: Identifying Rocker Arm Assembly And Bolts

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Camshaft
    1. Remove the wire tie while keeping light tension on the cam chain.
    2. Install the exhaust camshaft.
    3. Slide the exhaust camshaft in at an angle to allow the cam chain to slip over the VTC actuator's teeth.

Fig. 176: Identifying Exhaust Camshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    4. Set the No. 1 piston at top dead center (TDC). The punch mark (A) on the VTC actuator and the punch mark (B) on the exhaust camshaft sprocket should be at the top. Align the TDC marks (C) on the VTC actuator and the exhaust camshaft sprocket.
    5. Apply new engine oil to the camshaft journals and lobes on both cams.

GETtheMANUALS.org

Fig. 177: Identifying Punch Marks On VTC Actuator And Exhaust Camshaft Sprocket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Camshaft Holder
    1. Set the camshaft holders (A) and cam chain guide B in place.

Fig. 178: Identifying Camshaft Holders And Cam Chain Guide
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Tighten the bolts to the specified torque.

Specified Torque

8 x 1.25 mm 22 N.m (2.2 kgf.m, 16 lbf.ft)

6 x 1.0 mm 12 N.m (1.2 kgf.m, 9 lbf.ft)

6 x 1.0 mm Bolts: (21), (22)

GETtheMANUALS.org

Fig. 179: Camshaft Holder Bolts Tightening Sequence
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Cam Chain
    1. To hold the intake camshaft, insert one of the camshaft lock pins (C) into the maintenance hole in CMP pulse plate A and through the No. 5 rocker shaft holder (D).
    2. To hold the exhaust camshaft, insert the other camshaft lock pin (C) into the maintenance hole in CMP pulse plate B and through the No. 5 rocker shaft holder (D).

Fig. 180: Installing Intake Camshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. Install the cam chain on the crankshaft sprocket with the colored link plate (A) aligned with the mark (B) on the crankshaft sprocket.

GETtheMANUALS.org

Fig. 181: Identifying Link Plate And Mark On Crankshaft Sprocket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the cam chain on the VTC actuator and the exhaust camshaft sprocket with the punch marks (A) aligned with the center of the two colored link plates (B).

Fig. 182: Identifying Punch Marks On Link Plates
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Cam Chain Tensioner Arm and Cam Chain Guide
    1. Install cam chain guide A and the tensioner arm (B).

GETtheMANUALS.org

Fig. 183: Identifying Cam Chain Guide And Tensioner Arm
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install cam chain guide B.

Fig. 184: Identifying Cam Chain Guide With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Cam Chain Auto-Tensioner

GETtheMANUALS.org

1. Compress the auto-tensioner when replacing the cam chain. Remove the pin (A) from the auto-tensioner that was installed during removal. Turn the plate (B) counterclockwise, to release the lock, then press the rod (C), and set the first cam (D) to the first edge of the rack (E). Insert the 1.2 mm (3/64 in) diameter pin back into the holes (F).

NOTE: **If the chain tensioner is not set up as described, the tensioner will be damaged.**

Fig. 185: Pressing Rod
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the auto-tensioner.

Fig. 186: Identifying Auto-Tensioner Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the pin from the auto-tensioner.

GETtheMANUALS.org

Fig. 187: Identifying Pin Of Auto-Tensioner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the camshaft lock pin set.

Fig. 188: Removing Camshaft Lock Pin Set
Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. Cam Chain Case
    1. Check the chain case oil seal for damage. If the oil seal is damaged, replace the chain case oil seal.
    2. Remove the old liquid gasket from the chain case mating surfaces, the bolts, and the bolt holes.
    3. Clean and dry the chain case mating surfaces.
    4. Apply liquid gasket (P/N 08718-0004 or 08718-0009) to the engine block mating surface of the chain case and to the inside edge of the threaded bolt holes. Install the component within 5 minutes of applying the liquid gasket.
        - Apply a 2.5 mm (0.098 in) diameter bead of liquid gasket along the broken line (A) and (B).
        - Apply a 3.0 mm (0.118 in) diameter bead of liquid gasket along the broken line (C).
        - If too much time has passed after applying the liquid gasket, remove the old liquid gasket and residue, then reapply new liquid gasket.

GETtheMANUALS.org

Fig. 189: Identifying Liquid Gasket Applying Areas Of Chain
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the spacer (A), then install a new O-ring (B) on the chain case.

NOTE:

- **When installing the chain case, do not slide the bottom surface onto the oil pan mounting surface.**
- **Wait at least 30 minutes before filling the engine with oil.**
- **Do not run the engine for at least 3 hours after installing the chain case.**

Fig. 190: Identifying Spacer, O-Ring And Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

24. Oil Pan Assembly (Without Transmission)
    1. Remove all of the old liquid gasket from the oil pan mating surfaces, the bolts, and the bolt holes.
    2. Clean and dry the oil pan mating surfaces.
    3. Apply liquid gasket (P/N 08718-0004 or 08718-0009) to the engine block mating surface of the oil pan and to the inner threads of the bolt holes. Install the component within 5 minutes of applying the liquid gasket.

NOTE:

- **Apply liquid gasket about 2.5 mm (0.098 in) diameter bead along the broken line (A).**
- **If too much time has passed after applying the liquid gasket, remove the old liquid gasket and residue, then reapply new liquid gasket.**

Fig. 191: Identifying Gasket Broken Line
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    4. Install the oil pan on the engine block.
    5. Tighten the bolts in three steps. In the final step, torque all bolts, in sequence, to 12 N.m (1.2 kgf.m, 9 lbf.ft). Wipe off the excess liquid gasket on the each side of crankshaft pulley and the flywheel/drive plate.

NOTE:

- **Wait at least 30 minutes before filling the engine with oil.**
- **Do not run the engine for at least 3 hours after installing the oil pan.**

GETtheMANUALS.org

Fig. 192: Oil Pan Bolts Tightening Sequence
Courtesy of AMERICAN HONDA MOTOR CO., INC.

25. Side Engine Mount Bracket, Engine Side
    1. Install the side engine mount bracket (A), then tighten the side engine mount bracket mounting bolts.

Fig. 193: Identifying Side Engine Mount Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

26. Crankshaft Pulley
    1. Clean the crankshaft pulley (A), the crankshaft (B), the bolt (C), and the washer (D). Lubricate with new engine oil as shown.

GETtheMANUALS.org

Fig. 194: Identifying Crankshaft Pulley, Crankshaft, Bolt And Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the crankshaft pulley, and hold the pulley with the holder handle (A) and the crankshaft pulley holder (B).
3. Torque the bolt to 50 N.m (5.1 kgf.m, 37 lbf.ft) with a torque wrench and a socket, 19mm(C). Do not use an impact wrench. If the pulley bolt or crankshaft are new, torque the bolt to 177 N.m (18.0 kgf.m, 131 lbf.ft), then remove the bolt and torque it to 50 N.m (5.1 kgf.m, 37 lbf.ft).
4. Tighten the pulley bolt an additional 90 °.

Fig. 195: Holding Pulley
Courtesy of AMERICAN HONDA MOTOR CO., INC.

27. VTC Oil Control Solenoid Valve
    1. Install the VTC oil control solenoid valve.

GETtheMANUALS.org

NOTE:

- **Coat a new O-ring with engine oil.**
- **Clean and dry the mating surface of the valve.**

Fig. 196: Identifying VTC Oil Control Solenoid Valve O-Ring And Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

28. Valve Clearance - Adjustment
    1. Set the No. 1 piston at top dead center (TDC). The punch mark (A) on the VTC actuator and the punch mark (B) on the exhaust camshaft sprocket should be at the top. Align the TDC marks (C) on the VTC actuator and the exhaust camshaft sprocket.

Fig. 197: Identifying Punch Marks On VTC Actuator And Exhaust Camshaft Sprocket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Select the correct feeler gauge for the valve clearance you are going to check.

GETtheMANUALS.org

Valve Clearance

Intake: 0.21-0.25 mm (0.009-0.009 in)

Exhaust: 0.25-0.29 mm (0.010-0.011 in)

Fig. 198: Identifying Valve Clearance
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Insert the feeler gauge (A) between the adjusting screw (B) and the end of the valve stem on the No. 1 cylinder, and slide it back and forth; you should feel a slight amount of drag.

Fig. 199: Identifying Feeler Gauge Between Adjusting Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. If you feel too much or too little drag, loosen the locknut with the locknut wrench and the adjuster, and turn the adjusting screw until the drag on the feeler gauge is correct.
5. Tighten the locknut to the specified torque, and recheck the clearance. Repeat the adjustment if

GETtheMANUALS.org

necessary.

Specified Torque

7 x 0.75 mm

14 N.m (1.4 kgf.m, 10 lbf.ft)

Apply new engine oil to the nut threads .

Fig. 200: Tightening Locknut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Rotate the crankshaft 180 ° clockwise (camshaft pulley turns 90 °).
7. Check and, if necessary, adjust the valve clearance on the No. 3 cylinder.

Fig. 201: Identifying Crankshaft Rotation
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

8. Rotate the crankshaft 180 ° clockwise (camshaft pulley turns 90 °).
9. Check and, if necessary, adjust the valve clearance on the No. 4 cylinder.

Fig. 202: Identifying Crankshaft Rotation
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Rotate the crankshaft 180 ° clockwise (camshaft pulley turns 90 °).
11. Check and, if necessary, adjust the valve clearance on the No. 2 cylinder.

Fig. 203: Identifying Crankshaft Rotation
Courtesy of AMERICAN HONDA MOTOR CO., INC.

29. Cylinder Head Cover
    1. Check the spark plug seals for damage. If any seals are damaged, replace it.
    2. Thoroughly clean the head cover gasket and the groove.

    NOTE: Check and, if necessary, replace the head cover gasket.

    3. Install the head cover gasket (A) in the groove of the cylinder head cover (B). Make sure the head cover gasket is seated securely.

GETtheMANUALS.org

Fig. 204: Identifying Cylinder Head Cover And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove all of the old liquid gasket from the chain case and the No. 5 rocker shaft holder.
5. Clean the head cover contacting surfaces with a shop towel.
6. Apply liquid gasket, (P/N 08718-0004 or 08718-0009) on the chain case and the No. 5 rocker shaft holder mating areas (A). Install the component within 5 minutes of applying the liquid gasket.

NOTE: **If too much time has passed after applying the liquid gasket, remove the old liquid gasket and residue, then reapply new liquid gasket.**

Fig. 205: Identifying No. 5 Rocker Shaft Holder Mating Areas
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Set the spark plug seals (A) on the spark plug tubes. Place the cylinder head cover (B) on the cylinder head, then slide the cover slightly back and forth to seat the head cover gasket.
8. Inspect the spark plug seals for damage.
9. Inspect the cover washers (C). Replace any washer that is damaged or deteriorated.

GETtheMANUALS.org

Fig. 206: Identifying Spark Plug Seals, Cylinder Head Cover And Washers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Tighten the bolts in two steps. In the final step torque bolts, in sequence, to 12 N.m (1.2 kgf.m, 9 lbf.ft).

NOTE:

- **Wait at least 30 minutes before filling the engine with oil.**
- **Do not run the engine for at least 3 hours after installing the head cover.**

Fig. 207: Cylinder Head Cover Bolts Tightening Sequence
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Install the two bolts (A).
12. Connect the breather hose (B).
13. Install the dipstick (C).

GETtheMANUALS.org

Fig. 208: Identifying Breather Hose, Bolts And Dipstick
Courtesy of AMERICAN HONDA MOTOR CO., INC.

30. Ignition Coil
    1. Install the ignition coils.

Fig. 209: Identifying Ignition Coil
Courtesy of AMERICAN HONDA MOTOR CO., INC.

31. Warm Up TWC
    1. Install the Warm Up TWC with new gasket.
    2. Install the exhaust chamber cover.

GETtheMANUALS.org

Fig. 210: Identifying Exhaust Chamber Cover And Warm Up TWC With Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

32. A/F Sensor
    1. Install the A/F sensor.

Fig. 211: Installing A/F Sensor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

33. Water Passage Assembly
    1. Clean and dry the water passage mating surfaces.
    2. Apply liquid gasket (P/N 08718-0004 or 08718-0009) to the engine block mating surface of the water passage, and to the inside edge of the threaded bolt holes. Install the component within 5 minutes of applying the liquid gasket.

NOTE:

- **Apply a 2.5 mm (0.098 in) diameter bead of liquid gasket along the broken line (A).**
- **If too much time has passed after applying the liquid gasket, remove the old liquid gasket and residue, then reapply new liquid gasket.**

Fig. 212: Identifying Gasket Broken Line
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. Install the water passage with new O-ring.

GETtheMANUALS.org

Fig. 213: Identifying Water Passage With O-Ring And Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

34. Injector Base Assembly
    1. Install the injector base (A) with a new gasket (B).

Fig. 214: Identifying Injector Base And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

35. Intake Manifold and Throttle Body Assembly
    1. Install the intake manifold (A) with new gaskets (B), and tighten the bolts and nuts in a crisscross pattern in three steps, beginning with the inner bolt.

GETtheMANUALS.org

Fig. 215: Identifying Intake Manifold, Gasket And Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the intake manifold lower bracket.

Fig. 216: Identifying Intake Manifold Lower Bracket Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

36. Fuel Injector and Rail Assembly
    1. Install the rail with the fuel injector.

GETtheMANUALS.org

Fig. 217: Identifying Fuel Injector And Rail Assembly Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

37. Drive Plate Assembly
    1. Install the drive plate (A) and the washer (B), and tighten the eight bolts in a crisscross pattern in at least two steps.

Fig. 218: Identifying Drive Plate, Washer And Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

38. Automatic Transmission Assembly (After Removal Engine)
    1. Install the automatic transmission.

GETtheMANUALS.org

Fig. 219: Identifying Automatic Transmission Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the torque converter bolts (8 bolts) while rotating the crankshaft pulley.
3. Install the torque converter cover.

Fig. 220: Identifying Torque Converter Cover And Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

39. A/T Intermediate Shaft Assembly
    1. Clean the areas where the intermediate shaft contacts the differential thoroughly with solvent, and dry them with compressed air.

GETtheMANUALS.org

NOTE: **Do not wash the rubber parts with solvent.**

2. Insert the intermediate shaft (A) into the differential correctly.

NOTE: **Insert the intermediate shaft carefully to prevent damaging the oil seal (B).**

Fig. 221: Identifying Intermediate Shaft And Oil Seal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the two dowel bolts (A) and the flange bolt (B).

Fig. 222: Identifying Dowel Bolts And Flange Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

40. Engine Wire Harness

GETtheMANUALS.org

1. Install the engine wire harness.

Fig. 223: Identifying Engine Wire Harness
Courtesy of AMERICAN HONDA MOTOR CO., INC.

41. Alternator
    1. Connect the connector and the cable.
    2. Install the alternator.

Fig. 224: Identifying Alternator Nut With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

3. Install the three bolts securing the alternator.

Fig. 225: Identifying Alternator Securing Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

42. Starter
    1. Install the starter.
    2. Connect the cable, and the connector. Make sure the crimped side of the ring terminal faces away from the starter when you connect it.

Fig. 226: Identifying Starter Nut With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

3. Install the starter.

Fig. 227: Identifying Starter Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

43. Ignition Coil Cover
    1. Install the ignition coil cover.

Fig. 228: Identifying Ignition Coil Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

ECM/PCM CONNECTOR FOR INPUTS AND OUTPUTS

PCM INPUTS AND OUTPUTS AT PCM CONNECTOR A ([]) (49P)

Fig. 229: PCM Connector A (49P) Terminals Layout

19	RED	OP_2_SW (TRANSMISSION FLUID PRESSURE SWITCH A (2ND CLUTCH))	Detects transmission fluid pressure switch A (2nd clutch) signal	With engine running: • Without 2nd clutch pressure: about 5.0 V • With 2nd clutch pressure: about 0 V
20	Not used	Not used		
21	PUR	SHA (SHIFT SOLENOID VALVE A)	Drives shift solenoid valve A	With engine running in R, D (in 1st, 4th, and 5th gears), D3 (in 1st gear), and 1: battery voltage With engine running in P, N, D (in 2nd and 3rd gears) and D3 (in 2nd and 3rd gears), and 2: about 0 V
22	LT BLU	VGP (MASS AIR FLOW (MAF) SENSOR +SIDE)	Detects MAF sensor signal	At idle with warmed up engine and no electrical load: about 1.1 - 1.6 V (between VG+ terminal and VG- terminal)
23	WHT	ATP-N (TRANSMISSION RANGE SWITCH N	Detects transmission range switch N	With ignition switch ON (II) in N: about 0 V With ignition switch ON (II)

GETtheMANUALS.org

		POSITION)	position signal	in any position other than N: about 5.0 V
24	PUR	ATP-P (TRANSMISSION RANGE SWITCH P POSITION)	Detects transmission range switch P position signal	With ignition switch ON (II) in P: about 0 V With ignition switch ON (II) in any position other than P: more than 5.0 V
25	TAN	ATP-R (TRANSMISSION RANGE SWITCH R POSITION)	Detects transmission range switch R position signal	With ignition switch ON (II) in R: about 0 V With ignition switch ON (II) in any position other than R: battery voltage
26	PUR	ATP-1 (TRANSMISSION RANGE SWITCH 1 POSITION)	Detects transmission range switch 1 position signal	With ignition switch ON (II) in 1: about 0 V With ignition switch ON (II) in any position other than 1: battery voltage.
27	RED	ATP-D3 (TRANSMISSION RANGE SWITCH D3 POSITION)	Detects transmission range switch 2 position signal	With ignition switch ON (II) in 2: about 0 V With ignition switch ON (II) in any position other than 2: battery voltage
28	WHT	NM (INPUT SHAFT (MAINSHAFT) SPEED SENSOR)	Detects input shaft (mainshaft) speed sensor signals	With ignition switch ON (II): about 0 V or about 5.0 V With engine running in N: about 2.5 V (pulses)
29	PNK	VCC2 (SENSOR VOLTAGE)	Provides sensor reference voltage	With ignition switch ON (II): about 5.0 V
30	Not used	Not used		
31	GRN	MAP (PB) (MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR)	Detects MAP sensor signal	With ignition switch ON (II): about 3.0 V At idle: about 1.0 V (depending on engine speed)
32	WHT	SHB (SHIFT SOLENOID VALVE B)	Drives shift solenoid valve B	With engine running in P, R, N, D (in 1st and 2nd gears), D3 (in 1st and 2nd gears), 2, and 1: battery voltage With engine running in D (in 3rd, 4th, and 5th gears), and D3 (in 3rd gear): about 0 V
33	GRN	VT_SOL (ROCKER ARM OIL CONTROL SOLENOID A)	Drives rocker arm oil control solenoid A	At idle: about 0 V
34	PNK	TW (ENGINE COOLANT TEMPERATURE (ECT)	Detects ECT sensor 1	With ignition switch ON (II): about 0.1 - 4.8 V

GETtheMANUALS.org

		SENSOR 1)	signal	(depending on engine coolant temperature)
35	YEL	ATP-D (TRANSMISSION RANGE SWITCH D POSITION)	Detects transmission range switch D position signal	With ignition switch ON (II) in D: about 0 V With ignition switch ON (II) in any position other than D: battery voltage
36	BLU	LINEAR_C+ (A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE C)	Drives A/T clutch pressure control solenoid valve C	With ignition switch ON (II): current controlled
37	Not used	Not used		
38	RED	TATF (ATF TEMPERATURE SENSOR)	Detects ATF temperature signal	With ignition switch ON (II): about 0.2 - 4.8 V (depending on ATF temperature)
39	LT GRN	ATP-FWD (TRANSMISSION RANGE SWITCH FWD POSITION)	Detects transmission range switch FWD position signal	With ignition switch ON (II) in D, 2, and 1: about 0 V With ignition switch ON (II) in any position other than D, 2, and 1: battery voltage
40	YEL	SHE (SHIFT SOLENOID VALVE E)	Drives shift solenoid valve E	With engine running in P and R, and lock-up condition (in D): battery voltage With engine running in N, and no lock-up condition (in D, D3, 2, and 1): about 0 V
41	Not used	Not used		
42	RED	TA (INTAKE AIR TEMPERATURE (IAT) SENSOR)	Detects IAT sensor signal	With ignition switch ON (II): about 0.1 - 4.0 V (about 2.6 V at normal operating temperature)
43	LT GRN	VGM (MASS AIR FLOW (MAF) SENSOR -SIDE)	Ground for MAF sensor signal	
44	GRY	SG2 (SENSOR GROUND)	Sensor ground	Less than 0.2 V at all times
45	PNK	ATP-RVS (TRANSMISSION RANGE SWITCH RVS POSITION)	Detects transmission range switch RVS position signal	With ignition switch ON (II) in R: about 0 V With ignition switch ON (II) in any position other than R: battery voltage
46	WHT	SO2 (SECONDARY HEATED OXYGEN SENSOR (SECONDARY HO2S)	Detects secondary HO2S (sensor 2) signal	With throttle fully opened from idle and warmed up engine: about 0.8 V With throttle quickly closed: below 0.4 V (() between SO2

GETtheMANUALS.org

		(SENSOR 2))		terminal and SO2SG terminal)
47	Not used	Not used		
48	LT GRN	NC (OUTPUT SHAFT (COUNTERSHAFT) SPEED SENSOR)	Detects output shaft (countershaft) speed sensor signal	With ignition switch ON (II): about 0 V or about 5.0 V With driving: about 2.5 V (pulses)
49	Not used	Not used		

PCM INPUTS AND OUTPUTS AT PCM CONNECTOR C (O) (49P)

Fig. 231: PCM Connector C (49P) Terminals Layout
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Terminal number	Wire color	Terminal name	Description	Signal
1	YEL	VB ETCS (IGNITION SIGNAL ETCS)	Detects ignition signal	With ignition switch ON (II): battery voltage
2	BLK	PG1 (POWER GROUND ETCS)	Ground circuit for PCM	Less than 0.2 V at all times
3	GRN	MTR1 (THROTTLE ACTUATOR -SIDE)	Ground for throttle actuator	With ignition switch ON (II) and accelerator pedal released: about 0 V
4	PNK	MTR2 (THROTTLE ACTUATOR +SIDE)	Drives throttle actuator	About 1.5 V immediately after turning ignition switch ON (II), then about 0 V
5	PUR	INJ_1 (No. 1 INJECTOR)	Drives No. 1 injector	
6	RED	INJ_2 (No. 2 INJECTOR)	Drives No. 2	

GETtheMANUALS.org

			injector	
7	BLU	INJ_3 (No. 3 INJECTOR)	Drives No. 3 injector	At idle: duty controlled With ignition switch ON (II): battery voltage
8	TAN	INJ_4 (No. 4 INJECTOR)	Drives No. 4 injector	
9	GRN	AFHT (AIR FUEL RATIO (A/F) SENSOR (SENSOR 1) HEATER CONTROL)	Drives A/F sensor (sensor 1) heater	With ignition switch ON (II): battery voltage With warmed up engine running: duty controlled
10	WHT	IG1 (F/P) (IGNITION SIGNAL)	Detects ignition signal	With ignition switch ON (II): battery voltage
11	Not used	Not used		
12	Not used	Not used		
13	LT BLU	VT_SW (ROCKER ARM OIL PRESSURE SWITCH)	Detects rocker arm oil pressure switch signal	At idle: about 0 V
14	GRY	SG3 (ETCS) (SENSOR GROUND)	Sensor ground	Less than 0.2 V at all times
15	BRN	PG1 (POWER GROUND)	Ground circuit for PCM	Less than 0.2 V at all times
16	BLU	CAM (CAMSHAFT POSITION (CMP) SENSOR A)	Detects CMP sensor A signal	With engine running: pulses
17	RED	KS (KNOCK SENSOR)	Detects knock sensor signal	With engine knocking: pulses Without engine knocking: 0 V
18	Not used	Not used		
19	Not used	Not used		
20	BRN	LG2 (LOGIC GROUND)	Ground circuit for PCM	Less than 0.2 V at all times
21	GRN	SHC (SHIFT SOLENOID VALVE C)	Drives shift solenoid valve C	With engine running in N, D (in 1st, 3rd, and 5th gears), D3 (in 1st and 3rd gears), and 1: battery voltage With engine running in P, R, D (in 2nd and 4th gears), D3 (in 2nd gear), and 2: about 0 V
22	TAN	VCC3 (ETCS) (SENSOR VOLTAGE)	Provides sensor reference voltage	With ignition switch ON (II): about 5.0 V
23	PNK	VCC1 (SENSOR VOLTAGE)	Provides sensor reference voltage	With ignition switch ON (II): about 5.0 V
24	GRY	SG1 (SENSOR GROUND)	Sensor ground	Less than 0.2 V at all times

GETtheMANUALS.org

25	YEL	IGN_PULSE1 (No. 1 IGNITION COIL PULSE)	Drives No. 1 ignition coil	With ignition switch ON (II): about 0 V With engine running: pulses
26	BLU	IGN_PULSE2 (No. 2 IGNITION COIL PULSE)	Drives No. 2 ignition coil	
27	WHT	IGN_PULSE3 (No. 3 IGNITION COIL PULSE)	Drives No. 3 ignition coil	
28	PUR	IGN_PULSE4 (No. 4 IGNITION COIL PULSE)	Drives No. 4 ignition coil	
29	Not used	Not used		
30	LT GRN	TH_1 (THROTTLE POSITION (TP) SENSOR A)	Detects TP sensor A signal	With ignition switch ON (II) and accelerator pedal pressed: about 3.9 V With ignition switch ON (II) and accelerator pedal released: about 0.8 V
31	RED	TH_2 (THROTTLE POSITION (TP) SENSOR B)	Detects TP sensor B signal	With ignition switch ON (II) and accelerator pedal pressed: about 4.2 V With ignition switch ON (II) and accelerator pedal released: about 1.7 V
32	PNK	SHD (SHIFT SOLENOID VALVE D)	Drives shift solenoid valve D	With engine running in D (in 2nd and 5th gears), D3 (in 2nd gear), and 2: battery voltage With engine running in P, R, N, D (in 1st, 3rd, and 4th gears), D3 (in 1st and 3rd gears), and 1: about 0 V
33	BLU	VTC_P (VTC OIL CONTROL SOLENOID VALVE)	Drives VTC oil control solenoid valve	With ignition switch ON (II): about 0 V
34	Not used	Not used		
35	Not used	Not used		
36	Not used	Not used		
37	Not used	Not used		
38	Not used	Not used		
39	RED	AFS+ (AIR FUEL RATIO (A/F) SENSOR (SENSOR 1) +SIDE)	Detects A/F sensor (sensor 1) signal	At idle: about 2.2 V

GETtheMANUALS.org

40	YEL	AFS- (AIR FUEL RATIO (A/F) SENSOR (SENSOR 1) -SIDE)	Detects A/F sensor (sensor 1) signal	At idle: about 1.8 V
41	GRN	TDC (CAMSHAFT POSITION (CMP) SENSOR B)	Detects CMP sensor B signal	With engine running: pulses
42	BLU	CRANK_P (CRANKSHAFT POSITION (CKP) SENSOR)	Detects CKP sensor signal	With engine running: pulses
43	Not used	Not used		
44	Not used	Not used		
45	Not used	Not used		
46	Not used	Not used		
47	GRY	SO2SG (SECONDARY HEATED OXYGEN SENSOR (SECONDARY HO2S (SENSOR 2)) SENSOR GROUND)	Sensor ground for secondary HO2S (sensor 2)	With ignition switch ON (II): about 1.5 V
48	GRN	KSGND (KNOCK SENSOR GROUND)	Sensor ground for knock sensor	Less than 0.2 V at all times.
49	Not used	Not used		

ECT SENSOR 1 REMOVAL AND INSTALLATION

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Front Splash Shield
    1. Remove the bolts (A), then remove the clips (B) that secure the front inner fender and the front splash shield (C) to the body.
    2. From under the front bumper (D), remove the clips (E).
    3. From under the body, remove the clips (F), then pull out the front splash shield.

GETtheMANUALS.org

Fig. 232: Identifying Front Bumper, Clips And Front Splash Shield
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Radiator Cap
    1. Wait until the engine is cool, then carefully remove the radiator cap.
4. Radiator Coolant - Replacement
    1. Loosen the drain plug (A), and drain the coolant.
    2. After the coolant has drained, tighten the drain plug securely.

GETtheMANUALS.org

Fig. 233: Loosening Drain Plug
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. ECT Sensor 1
    1. Remove ECT sensor 1.

Fig. 234: Identifying Ect Sensor 1 O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

GETtheMANUALS.org

1. ECT Sensor 1
    1. Install ECT sensor 1 (A) with a new O-ring (B).

Fig. 235: Identifying ECT Sensor 1 And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Splash Shield
    1. Install the front splash shield (A), then install the bolts (B) and the clips (C, D). Make sure the clips snap into place securely.

GETtheMANUALS.org

Fig. 236: Identifying Front Splash Shield, Clips And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Radiator Coolant - Replacement
    1. Follow the chart and pour coolant into the radiator up to the base of the filler neck.

NOTE:

- **Always use Honda Long Life Antifreeze/Coolant Type 2 or Honda Extreme Cold Weather Antifreeze/Coolant Type 2. Using a non-Honda coolant can result in corrosion, causing the cooling system to malfunction or fail.**
- **Honda Long Life Antifreeze/Coolant Type 2 is a mixture of 50 % antifreeze and 50 % water. Honda Extreme Cold Weather Antifreeze/Coolant Type 2 is a 100% concentration coolant. Do not add water to either coolant.**
- **If the vehicle is regularly used in very low temperatures (under -22 °F (-30 °C)) a 60% concentration of coolant should be used.**

Operation	Vehicle Usage (Desired Mixture)	Current Mixture	Coolant Drain	Add Amount of Honda Extreme Cold Weather Antifreeze/Coolant Type 2 (100% concentrate)	Then add Honda Long Life Antifreeze/Coolant Type 2 (50/50)

GETtheMANUALS.org

Coolant Change	Normal Area (50/50)	50/50 60/40 unknown	Drain radiator and reservoir	None	Top off the cooling system
	Very Cold Area (60/40)	50/50 unknown		About 1.5 L (51 fl oz)	
		60/40		About 1.3L (44 fl oz)	
Engine Overhaul	Normal Area (50/50)	-	-	None	
	Very Cold Area (60/40)	-	-	About 1.5 L (51 fl oz)	
Coolant Winterizing	Very Cold Area (60/40)	50/50	Drain about 2.0 L (68 fl oz) from radiator	About 1.5 L (51 fl oz)	
		unknown (1)	Drain radiator and reservoir		
(1) When you want to winterize the coolant with the minimum amount of coolant change but the current coolant concentration in the vehicle is unknown, you must drain all coolant from the cooling system.					

Engine Coolant Capacities (Including the coolant reservoir capacity of 0.62 L (0.164 US gal))	
At Coolant Change:	6.23 L (1.646 US gal)
After Engine Overhaul:	7.44 L (1.966 US gal)

Fig. 237: Pouring Coolant Into Radiator
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Loosely install the radiator cap.

GETtheMANUALS.org

3. Start the engine and let it run until the radiator fan comes on at least twice. Do not operate the air conditioning system.
4. Turn off the engine. Check the level in the radiator and add Honda Long Life Antifreeze/Coolant Type 2 if needed.
5. Put the radiator cap securely, then start the engine again, and check for leaks.
6. Clean up any spilled engine coolant.
7. Fill the coolant reservoir to the MAX mark (A) with Honda Long Life Antifreeze/Coolant Type 2.

Fig. 238: Identifying Marking On Coolant Reservoir
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

GETtheMANUALS.org

3. From under the body, remove the clips (F), then pull out the front splash shield.

Fig. 271: Identifying Front Bumper, Clips And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Knock Sensor
   1. Remove the knock sensor (A).

Fig. 272: Identifying Knock Sensor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

GETtheMANUALS.org

1. Knock Sensor
    1. Install the knock sensor (A) so that the connector position is top.

NOTE: Do not use impact tools, hand tools only on installation.

Fig. 273: Identifying Knock Sensor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Splash Shield
    1. Install the front splash shield (A), then install the bolts (B) and the clips (C, D). Make sure the clips snap into place securely.

GETtheMANUALS.org

Fig. 274: Identifying Front Splash Shield, Bolts And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

MAF SENSOR/IAT SENSOR REMOVAL AND INSTALLATION

REMOVAL

1. MAF Sensor/IAT Sensor
    1. Remove the MAF sensor/IAT sensor.

GETtheMANUALS.org

Fig. 275: Identifying MAF Sensor/IAT Sensor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. MAF Sensor/IAT Sensor
    1. Install the MAF sensor/IAT sensor (A) with a new O-ring (B).

Fig. 276: Identifying MAF Sensor/IAT Sensor And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

MAP SENSOR REMOVAL AND INSTALLATION

GETtheMANUALS.org

REMOVAL

1. MAP Sensor
    1. Remove the MAP sensor.

Fig. 277: Identifying MAP Sensor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. MAP Sensor
    1. Install the MAP sensor (A) with a new O-ring (B).

GETtheMANUALS.org

Fig. 278: Identifying MAP Sensor And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

PCM REMOVAL AND INSTALLATION

REMOVAL

1. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

GETtheMANUALS.org

Fig. 279: Identifying Data Link Connector (DLC)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. SCS Line Short
    1. Jump the SCS line with the HDS.
    2. Turn the ignition switch to LOCK (0).
3. PCM Assembly
    1. Remove the PCM cover (D).
    2. Disconnect PCM connectors A, B, and C.

    NOTE: PCM connectors A, B, and C have symbols (A=[], B=delta, C=o) embossed on them for identification.

    3. Remove the PCM (E).

GETtheMANUALS.org

Fig. 280: Identifying PCM, Cover And Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

NOTE: If you are removing the PCM, skip the procedures of using the HDS.

1. PCM Assembly
    1. Install the PCM (D).
    2. Connect PCM connectors A, B, and C.

        NOTE: PCM connectors A, B, and C have symbols (A=[], B= delta, C=o) embossed on them for identification.

    3. Install the PCM cover (E).

GETtheMANUALS.org

Fig. 281: Identifying PCM, Cover And Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 282: Identifying Data Link Connector (DLC)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

3. VIN Registration
    1. Manually input the VIN to the PCM with the HDS.

        NOTE: DTC P0630 VIN Not Programmed or Mismatch may be stored because the VIN has not been programmed into the PCM; ignore it, and continue this procedure.

4. Immobilizer System Registration - Programming Control Unit
    1. Select the IMMOBI SYSTEM with the HDS.
    2. Enter the immobilizer code using the PCM replacement procedure in the HDS; it allows you to start the engine.
5. PCM - Reset
    1. Reset the PCM with the HDS while the engine is stopped.
    2. Turn the ignition switch to LOCK (0).
    3. Turn the ignition switch to ON (II), and wait 30 seconds.
6. PCM - Update

    NOTE: Check any official Honda service website for more service information about updating the MVCI and control units.

7. Warm Up The Engine

    Start the engine. Hold the engine speed at 3, 000 rpm without load in P or N until the radiator fan comes on, then let it idle.

8. PCM - Idle Learn
    1. Let the engine idle for about 5 minutes with the throttle fully closed.

        NOTE: If the radiator fan comes on, do not include its running time in the 5 minutes.

    2. After learning, turn the ignition switch to LOCK (0).
9. CKP Pattern - Clear/Learn
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.
    4. Select CRANK PATTERN in the ADJUSTMENT MENU with the HDS.
    5. Select CRANK PATTERN CLEAR, and clear the CKP pattern.
    6. Select CRANK PATTERN LEARNING with the HDS, and follow the screen prompts.
    7. After learning, turn the ignition switch to LOCK (0).

GETtheMANUALS.org

8. Disconnect the HDS from the DLC.

Fig. 283: Identifying Data Link Connector (DLC)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

PCV VALVE REMOVAL AND INSTALLATION

REMOVAL

1. PCV Valve
    1. Disconnect the PCV hose (A).
    2. Remove the PCV valve (B).

GETtheMANUALS.org

Fig. 284: Identifying PCV Hose And Valve
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. PCV Valve
    1. Install the PCV valve (A) with a new washer (B).
    2. Connect the PCV hose (C).

Fig. 285: Identifying PCV Valve, Hose And Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

SECONDARY HO2S REMOVAL AND INSTALLATION

SPECIAL TOOLS DESCRIPTION

Image	Description/Tool Number
	O2 Sensor Socket Wrench Snap-on SWR2 or O2 Sensor Wrench Snap-on YA8875, commercially available

GETtheMANUALS.org

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Front Floor Undercover
    1. Remove the bolts (A) and the clips (B, C) securing the front floor undercover (D), then remove the front floor undercover.

GETtheMANUALS.org

Fig. 286: Identifying Front Floor Undercover, Clips And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Secondary HO2S
    1. Remove the secondary HO2S (A).

Fig. 287: Identifying Secondary HO2S
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

GETtheMANUALS.org

1. Secondary HO2S
    1. Install the secondary HO2S (A).

Fig. 288: Identifying Secondary HO2S
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Floor Undercover
    1. Install the front floor undercover (A), then install the bolts (B) and the clips (C, D). Make sure the clips snap into place securely.

GETtheMANUALS.org

HOW TO SET READINESS CODES

MALFUNCTION INDICATOR LAMP (MIL) INDICATION (IN RELATION TO READINESS CODES)

The vehicle has certain readiness codes that are part of the on-board diagnostics for the emissions systems. If the vehicle's battery has been disconnected or gone dead, if DTCs have been cleared, or if the PCM has been reset, these readiness codes are reset to incomplete. In some states, part of the emissions testing is to make sure these codes are set to complete. If all of them are not set to complete, the vehicle may fail the emission test, or the test cannot be finished.

To check if the readiness codes are set to complete, turn the ignition switch to ON (II), but do not start the engine. The MIL comes on for 15-20 seconds. If it then goes off, the readiness codes are set to complete. If it flashes five times, one or more readiness codes are not set to complete. To set readiness codes from incomplete to complete, do the procedure for the appropriate code.

To check the status of a specific DTC system, check the OBD status in the DTC MENU with the HDS. This screen displays the DTC, the current data list of the enable criteria, and the status of the readiness testing.

CATALYTIC CONVERTER MONITOR AND READINESS CODE

NOTE:

- **During the procedure, do not turn the ignition switch to ACC (I) or LOCK (0).**
- **All readiness codes are cleared when the battery is disconnected, if DTCs have been cleared, or if the PCM is reset with the HDS.**
- **Low ambient temperatures or excessive stop-and-go traffic may increase the drive time needed to switch the readiness code from incomplete to complete.**
- **The readiness code will not switch to complete until all the enable criteria are met.**
- **If a fault in the secondary HO2S system caused the MIL to come on, the readiness code cannot be set to complete until you correct the fault.**

Enable Criteria

- ECT SENSOR 1 at 158 °F (70 °C) or more.
- IAT SENSOR at 20 °F (-7 °C) or more.
- Vehicle speed above 25 mph (40 km/h).

Procedure

GETtheMANUALS.org

1. Connect the HDS to the vehicle's data link connector (DLC), and bring up the READINESS CODEs screen for Catalyst in the DTCs MENU.
2. Start the engine.
3. Test-drive the vehicle under stop-and-go conditions with short periods of steady cruise. After about 5 miles (8 km), the readiness code should switch to complete.
4. If the readiness code is still not set to complete, check for a Pending DTC with the HDS. If there is no DTC, one or more of the enable criteria were probably not met; repeat the procedure.

EVAPORATIVE EMISSION (EVAP) CONTROL SYSTEM MONITOR AND READINESS CODE

NOTE: **All readiness codes are cleared when the battery is disconnected, if DTCs have been cleared, or if the PCM is reset with the HDS.**

Enable Criteria

- Battery voltage is more than 10.5 V.
- Engine at idle.
- ECT SENSOR 1 and 2 between 176 °F (80 °C) and 212 °F (100 °C).
- MAP SENSOR less than 46.6 kPa (14 inHg, 350 mmHg).
- Vehicle speed 0 mph (0 km/h).
- IAT SENSOR between 32 °F (0 °C) and 212 °F (100 °C).

Procedure

1. Connect the HDS to the DLC.
2. Start the engine.
3. Select EVAP TEST in the INSPECTION MENU with the HDS, then select the FUNCTION TEST in the EVAP TEST MENU.
   - If the result is normal, readiness is complete.
   - If the result is not normal, go to the next step.
4. Check for a Pending DTC. If there is no DTC, one or more of the enable criteria were probably not met; repeat the procedure.

AIR FUEL RATIO (A/F) SENSOR MONITOR AND READINESS CODE

NOTE:
- **During the procedure, do not turn the ignition switch to ACC (I) or LOCK (0).**
- **All readiness codes are cleared when the battery is disconnected, if DTCs have been cleared, or if the PCM is reset with the HDS.**

Enable Criteria

ECT SENSOR 1 at 140 °F (60 °C) or more.

GETtheMANUALS.org

Procedure

1. Start the engine.
2. Test-drive the vehicle under stop-and-go conditions with short periods of steady cruise. During the drive, decelerate (with the throttle fully closed) for 5 seconds. After about 3.5 miles (5.6 km), the readiness code should switch from incomplete to complete.
3. Check the readiness codes screen for the AIR FUEL RATIO (A/F) SENSOR in the DTCs MENU with the HDS.
   - If the screen shows complete, readiness is complete.
   - If the screen shows not complete, go to the next step.
4. Check for a Pending DTC. If there is no DTC, the enable criteria was probably not met. Select the DATA LIST MENU. Check ECT SENSOR 1 in the ALL DATA LIST with the HDS. If ECT SENSOR 1 is less than 140 °F (60 °C), run the engine until it is more than 140 °F (60 °C), then repeat the procedure.

AIR FUEL RATIO (A/F) SENSOR HEATER MONITOR READINESS CODE

NOTE: All readiness codes are cleared when the battery is disconnected, if DTCs have been cleared, or if the PCM is reset with the HDS.

Procedure

1. Start the engine, and let it idle for 1 minute. The readiness code should switch from incomplete to complete.
2. If the readiness code is still not set to complete, check for a Pending DTC. If there is no DTC, repeat the procedure.

MISFIRE MONITOR AND READINESS CODE

- This readiness code is always set to available because misfiring is continuously monitored.
- Monitoring pauses, and the misfire counter resets, if the vehicle is driven over a rough road.
- Monitoring also pauses, and the misfire counter holds at its current value, if the throttle position changes more than a predetermined value, or if driving conditions fall outside the range of any related enable criteria.

FUEL SYSTEM MONITOR AND READINESS CODE

- This readiness code is always set to available because the fuel system is continuously monitored during closed loop operation.
- Monitoring pauses when the catalytic converter, the EVAP control system, and the A/F sensor monitors are active.
- Monitoring also pauses when any related enable criteria are not being met. Monitoring resumes when the enable criteria is again being met.

COMPREHENSIVE COMPONENT MONITOR AND READINESS CODE

GETtheMANUALS.org

This readiness code is always set to available because the comprehensive component monitor is continuously running whenever the engine is cranking or running.

HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS

INTERMITTENT FAILURES

The term intermittent failure means a system may have had a failure, but it checks OK now. If the malfunction indicator lamp (MIL) on the dash does not come on, check for poor connections or loose terminals at all connectors related to the circuit that you are troubleshooting. If the MIL was on but then went off, the original problem may have been intermittent.

SERVICE INFORMATION

Periodically, new PCM software or new service procedures may become available. Always check online for the latest software or service information related to the DTCs or symptoms you are troubleshooting.

OPENS AND SHORTS

Open and short are common electrical terms. An open is a break in a wire or at a connection. A short is an accidental connection of a wire to ground or to another wire. In simple electronics, this usually means something won't work at all. With complex electronics (such as PCMs) this can sometimes mean something works, but not the way it's supposed to.

HOW TO USE THE HDS (HONDA DIAGNOSTIC SYSTEM)

1. Start the engine, and check the MIL (A).

NOTE: If the ignition switch is turned to ON (II), and the engine is not started, the MIL stays on for 15 -20 seconds.

GETtheMANUALS.org

Fig. 1: Identifying MLL
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. If the MIL stays on, connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.

Fig. 2: Identifying Data Link Connector (DLC)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Turn the ignition switch to ON (II).
4. Make sure the HDS communicates with the PCM and other vehicle systems. If it does not, go to the **DLC CIRCUIT TROUBLESHOOTING**.
5. Check the diagnostic trouble code (DTC) and note it. Also check the freeze data and/or on-board snapshot data, and download any data found. Then refer to the indicated DTC's troubleshooting, and begin the appropriate troubleshooting procedure.

NOTE:

- **Freeze data indicates the engine conditions when the first malfunction, misfire, or fuel trim malfunction was detected.**
- **The HDS can read the DTC, the freeze data, the on-board snapshot, the current data, and other powertrain control module (PCM) data.**
- **For specific operations, refer to the user's manual that came with the HDS.**

6. If no DTCs are found, go to the MIL circuit troubleshooting.

IF THE MIL DID NOT STAY ON

If the MIL did not stay on but there is a driveability problem, do the symptom troubleshooting.

IF YOU CAN'T DUPLICATE THE DTC

Some of the troubleshooting requires you to reset the PCM and try to duplicate the DTC. If the problem is

GETtheMANUALS.org

intermittent and you can't duplicate the DTC, do not continue through the procedure. To do so will only result in confusion and possibly, a needlessly replaced PCM.

HDS CLEAR COMMAND

The PCM stores various specific data to correct the system even if there is no electrical power such as when the battery negative terminal or No. A23 (15 A) fuse is disconnected. Stored data based on failed parts should be cleared by using the CLEAR COMMAND of the HDS, if parts are replaced.

The HDS has three kinds of clear commands to meet this purpose. They are DTC clear, PCM reset, and CKP pattern clear. The DTC clear command erases all stored DTC codes, freeze data, on-board snapshot, and readiness codes. This must be done with the HDS after reproducing the DTC during troubleshooting. The PCM reset command erases all stored DTC codes, freeze data, on-board snapshot, readiness codes, and all specific data to correct the system except CKP pattern. If the CKP pattern data in the PCM was cleared, you must do the CKP pattern learn procedure. The CKP pattern clear command erases only CKP pattern data. This command is for repair of a misfire or the CKP sensor.

SCAN TOOL CLEAR COMMAND

If you are using a generic scan tool to clear commands, be aware that there is only one setting for clearing the PCM, and it clears all commands at the same time (CKP pattern learn, idle learn, readiness codes, freeze data, on-board snapshot, and DTCs). After you clear all commands, you then need to do these procedures, in this order: PCM idle learn procedure; CKP pattern learn procedure.

DTC CLEAR

1. Clear the DTC with the HDS while the engine is stopped.
2. Turn the ignition switch to LOCK (0).
3. Turn the ignition switch to ON (II), and wait 30 seconds.
4. Turn the ignition switch to LOCK (0), and disconnect the HDS from the DLC.

PCM RESET

1. Reset the PCM with the HDS while the engine is stopped.
2. Turn the ignition switch to LOCK (0).
3. Turn the ignition switch to ON (II), and wait 30 seconds.
4. Turn the ignition switch to LOCK (0), and disconnect the HDS from the DLC.
5. **DO THE PCM IDLE LEARN PROCEDURE**.

HOW TO END A TROUBLESHOOTING SESSION (REQUIRED AFTER ANY TROUBLESHOOTING)

1. Reset the PCM with the HDS.
2. **DO THE PCM IDLE LEARN PROCEDURE**.
3. Turn the ignition switch to LOCK (0).

GETtheMANUALS.org

4. Disconnect the HDS from the DLC.

NOTE: **The PCM is part of the immobilizer system. If you replace the PCM, you must use the HDS to instruct the new PCM and the immobilizer- keyless control unit to recognize each other's unique serial code.**

HOW TO TROUBLESHOOT CIRCUITS AT THE PCM CONNECTORS

NOTE: **The PCM stays on for about an hour after the ignition switch is turned to LOCK (0). Jumping the SCS line after turning the ignition switch to LOCK (0) cancels this function. Disconnecting the PCM during this function, without jumping the SCS line first, can damage the PCM.**

1. Jump the SCS line with the HDS.
2. Remove the cover (A).

Fig. 3: Identifying Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Disconnect PCM connectors A, B, and C.

NOTE: **PCM connectors A, B, and C have symbols (A=•, B=delta, C=o) embossed on them for identification.**

GETtheMANUALS.org

Fig. 4: Disconnecting PCM Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. When diagnosis/troubleshooting is done at the PCM connectors, use the terminal test port (A) above the terminal you need to check.

Fig. 5: Identifying Terminal Test Port
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Connect one side of the patch cord terminals (A) to a commercially available digital multimeter (B), and connect the other side of the terminal (C) to a commercially available banana jack (Pomona Electronics Tool No. 3563 or equivalent) (D).

GETtheMANUALS.org

Fig. 6: Identifying Connections Of Patch Cord Terminals With Digital Multimeter And Banana Jack
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Gently contact the pin probe (male) at the terminal test port from the terminal side. Do not force the tips into the terminals.

NOTE:

- **For accurate results, always use the pin probe (male).**
- **To prevent damage to the connector terminals, do not insert test equipment probes, paper clips, or other substitutes as they can damage the terminals. Damaged terminals cause a poor connection and an incorrect measurement.**
- **Do not puncture the insulation on a wire. Punctures can cause or eventually lead to poor or intermittent electrical connections.**

OBD STATUS

The OBD status shows the current system status of each DTC and all of the parameters. This function is used to see if the repair was successfully completed. The results of diagnostic tests for the DTC are displayed as:

- PASSED: The on board diagnosis is successfully finished.
- FAILED: The on board diagnosis has finished but failed.
- EXECUTING: The vehicle is in enable criteria conditions of the DTC, and the on board diagnosis is running.
- NOT COMPLETED: The on board diagnosis was running but is out of the enable conditions of the DTC.
- OUT OF CONDITION: The vehicle has stayed out of the enable conditions of the DTC.

FUEL AND EMISSIONS SYSTEMS SYMPTOM TROUBLESHOOTING INDEX

SYMPTOM TROUBLESHOOTING INDEX

When the vehicle has one of these symptoms, check for a diagnostic trouble code (DTC) with the HDS. If there is no DTC, do the diagnostic procedure for the symptom, in the sequence listed, until you find the cause.

GETtheMANUALS.org

Symptom	Diagnostic procedure	Also check for
Engine will not start (MIL works OK, no DTCs set)	**TROUBLESHOOT THE ENGINE WILL NOT START, ENGINE STARTS BUT STALLS IMMEDIATELY, OR ENGINE IS HARD TO START**.	
Engine will not start, and HDS does not communicate with the PCM (MIL comes on and stays on)	**PCM POWER AND GROUND CIRCUIT TROUBLESHOOTING**.	
MIL comes on and stays on, or never comes on at all, no DTCs set	**TROUBLESHOOT THE MIL CIRCUIT**.	
Engine will not start (MIL works OK, no DTCs set, immobilizer indicator stays on or flashes)	**CHECK THE IMMOBILIZER SYSTEM** .	
Engine starts but stalls immediately (MIL works OK, no DTCs set, immobilizer indicator stays on or flashes)	**CHECK THE IMMOBILIZER SYSTEM** .	
Engine is hard to start (MIL works OK, no DTCs set)	**TROUBLESHOOT THE ENGINE WILL NOT START, ENGINE STARTS BUT STALLS IMMEDIATELY, OR ENGINE IS HARD TO START**.	
Cold fast idle too low (MIL works OK, no DTCs set)	1. **DO THE PCM IDLE LEARN PROCEDURE**. 2. **CHECK THE IDLE SPEED**. 3. **Clean the throttle body** See **THROTTLE BODY CLEANING** , **THROTTLE BODY DISASSEMBLY AND REASSEMBLY** or **THROTTLE BODY REMOVAL AND INSTALLATION** .	
Cold fast idle too high (MIL works OK, no DTCs set)	1. **DO THE PCM IDLE LEARN PROCEDURE**. 2. **CHECK THE IDLE SPEED**.	Intake air leaks
Idle speed fluctuates (MIL works OK, no DTCs set)	1. **DO THE PCM IDLE LEARN PROCEDURE**. 2. **CHECK THE IDLE SPEED**. 3. **TEST THE THROTTLE BODY** . 4. **TROUBLESHOOT THE A/C SIGNAL CIRCUIT** .	• Incorrect valve adjustment • Intake air leak

Courtesy of AMERICAN HONDA MOTOR CO., INC.

DLC CIRCUIT TROUBLESHOOTING

GETtheMANUALS.org

NOTE: **If you suspect the HDS or the HDS DLC cable may be the source of the communication problem, verify that they are working properly by connecting them to a known-good, like vehicle and system, and checking for communication problems.**

1. HDS communication check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Connect the HDS to the DLC.

     NOTE: **Make sure the HDS is properly connected to the DLC.**

   - 3. Turn the ignition switch to ON (II), and turn on the HDS.

     Does the HDS identify the vehicle?

     YES : Go to step 2.

     NO : Go to step 12.

2. Determine possible failure area (PGM-FI system, other systems):
   - 1. Check for Pending or Confirmed DTCs in the PGM-FI system with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame

     Are any Pending or Confirmed DTCs indicated?

     YES : Go to the indicated DTC's troubleshooting.

     NO : If the HDS does not communicate with the SRS, go to step 3.

     NO : If the HDS does not communicate with the VSA system, go to step 4.

     NO : If the HDS does not communicate with the TPMS, go to step 5.

     NO : If the HDS does not communicate with the EPS system, go to step 6.

     NO : If the HDS does not communicate with the IMMOBI (immobilizer) system, go to step 7.

     NO : If the HDS does not communicate with the BODY ELECTRICAL system, go to step 8.

3. SRS check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Turn the ignition switch to ON (II), and watch the SRS indicator.

GETtheMANUALS.org

Does the SRS indicator come on and go off?

YES : The SRS is OK. Go to step 9.

NO : Go to the symptom troubleshooting for **SRS indicator stays on, but no DTCs are stored, or cannot be read**

4. VSA system check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Turn the ignition switch to ON (II), and watch the VSA indicator.

   Does the VSA indicator come on and go off?

   YES : The VSA system is OK. Go to step 9.

   NO : Go to the **SYMPTOM TROUBLESHOOTING FOR ABS INDICATOR, BRAKE SYSTEM INDICATOR, AND VSA INDICATOR DO NOT GO OFF** .

5. TPMS check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Turn the ignition switch to ON (II), and watch the TPMS indicator.

   Does the TPMS indicator come on and go off?

   YES : The TPMS is OK. Go to step 9.

   NO : Go to the symptom troubleshooting for **TPMS indicator does not go off, and no DTCs are stored**

6. EPS system check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Start the engine, and watch the EPS indicator.

   Does the EPS indicator come on and go off?

   YES : The EPS system is OK. Go to step 9.

   NO : Go to the **EPS SYMPTOM TROUBLESHOOTING FOR EPS INDICATOR DOES NOT GO OFF, AND NO DTCS ARE STORED** .

7. Immobilizer system check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Turn the ignition switch to ON (II), and watch the immobilizer indicator.

   Does the immobilizer indicator stay on or flash?

GETtheMANUALS.org

YES : **GO TO THE IMMOBILIZER SYSTEM TROUBLESHOOTING** .

NO : The immobilizer system is OK. Go to step 9.

8. Body electrical system check:
   - 1. **DO THE GAUGE SELF-DIAGNOSTIC FUNCTION** .
   - 2. Check the gauge display.

   Is Error 2 or Error 12 indicated?

   YES : **GO TO THE BODY ELECTRICAL SYSTEM DTC'S TROUBLESHOOTING** .

   NO : The body electrical system is OK. Go to step 9.

9. Determine possible failure area (K LINE, others):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the HDS from the DLC.
   - 3. Check for continuity between test points 1 and 2.

   Test condition IG LOCK (0)

   Test circuit K LINE

   Test point 1 DLC (16P) No. 7 (LT BLU)

   Test point 2 Body ground

Fig. 9: Checking For Continuity Between Test Points 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Go to step 10.

NO : Go to step 11.

GETtheMANUALS.org

10. Shorted wire check (K LINE):
    - 1. Continue to check for continuity between DLC terminal No. 7 and body ground, while disconnecting these parts, one at a time:
        - SRS unit connector A (39P)
        - VSA modulator-control unit 38P connector
        - TPMS control unit 20P connector
        - EPS control unit connector A (11P)
        - Immobilizer-keyless control unit 7P connector
        - Audio unit (audio-navigation unit) connector A (24P)
        - Under-dash fuse/relay box connector Q (16P)

        Does continuity go away when one of the above components is disconnected?

        YES : Replace the part that caused an open when it was disconnected.

        NO : Repair a short in the K LINE wire between the DLC terminal No. 7 and the SRS unit, the VSA modulator-control unit, the TPMS control unit, the EPS control unit, the immobilizer-keyless control unit, the audio unit, the audio-navigation unit, or the driver's under-dash fuse/relay box.

11. Open wire check (K LINE):
    - 1. Connect terminals A and B with a jumper wire.

    Terminal A DLC (16P) No. (LT BLU)

    Terminal B Body ground

Fig. 10: Checking For Continuity Between Body Ground And Connector Terminals No. 7
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    - 2. Check for continuity between body ground and these connector terminals:

Connector	Terminal
SRS unit connector A (39P)	No. 19 (LT BLU)

GETtheMANUALS.org

VSA modulator-control unit 38P connector	No. 11 (LT BLU)
TPMS control unit 20P connector	No. 4 (LT BLU)
EPS control unit connector A (11P)	No. 5 (LT BLU)
Immobilizer-keyless control unit 7P connector	No. 3 (LT BLU)
Audio unit (audio-navigation unit) connector A (24P)	No. 13 (LT BLU)
Under-dash fuse/relay box connector Q (16P)	No. 14 (LT BLU)

Is there continuity between the body ground and each of the terminals in the chart?

YES : The K LINE wire is OK. Replace the control unit that does not communicate with the HDS.

NO : Repair an open in the K LINE wire between the DLC and the appropriate control unit connector.

12. Body electrical system (B-CAN) check:
    - 1. **DO THE GAUGE SELF-DIAGNOSTIC FUNCTION** .
    - 2. Check for gauge control module DTCs without the HDS.

    Is DTC U0029 and/or U0100 indicated?

    YES : **DO THE PCM POWER AND GROUND CIRCUIT TROUBLESHOOTING**.

    NO : Go to step 13.

13. Open wire check (+B BACK UP line):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Disconnect the HDS from the DLC.
    - 3. Measure the voltage between test points 1 and 2.

    Test condition IG LOCK (0)

    Test circuit +B BACK UP

    Test point 1 DLC (16P) No. 16 (WHT)

    Terminal B Body ground

GETtheMANUALS.org

Fig. 11: Measuring Voltage Between Test Points 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

YES : The +B BACK UP wire is OK. Go to step 14.

NO : Repair an open in the +B BACK UP wire between DLC terminal No. 16 and the No. A29 (10 A) fuse in the under-hood fuse/relay box.

14. Open wire check (GND line):
    - 1. Measure the voltage between test points 1 and 2.

      Test condition IG LOCK (0)

      Test circuit GND, +B BACK UP

      Test point 1 DLC (16P) No. 4 (BLK)

      Terminal B DLC (16P) No. 16 (WHT)

Fig. 12: Measuring Voltage Between Test Points 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The GND wire is OK. Go to step 15.

NO : Repair an open in the GND wire between DLC terminal No. 4 and G502.

GETtheMANUALS.org

15. Open wire check (F CAN-H line):
    - 1. Connect the HDS to the DLC.
    - 2. Jump the SCS line with the HDS.
    - 3. Disconnect the following connector. PCM connector A (49P)
    - 4. Disconnect the HDS from the DLC.
    - 5. Check for continuity between test points 1 and 2.

    Test condition IG LOCK (0)

    PCM connector A (49P): disconnected

    Test circuit F CAN-H

    Test point 1 PCM connector A (49P) No. 3 (WHT)

    Test point 2 DLC (16P) No. 6 (WHT)

Fig. 13: Checking For Continuity Between Test Points 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The F CAN-H wire is OK. Go to step 16.

NO : Repair an open in the F CAN-H wire between the PCM (A3) and DLC terminal No. 6.

16. Open wire check (F CAN-L line):
    - 1. Check for continuity between test points 1 and 2.

GETtheMANUALS.org

Test condition IG LOCK (0)

PCM connector A (49P): disconnected

Test circuit F CAN-L

Test point 1 PCM connector A (49P) No. 4 (RED)

Test point 2 DLC (16P) No. 14 (RED)

Fig. 14: Checking For Continuity Between Test Points 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The F CAN-L wire is OK. **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE**, then recheck. If the symptom/indication goes away and the PCM was updated, troubleshooting is complete. If the symptom/indication goes away and the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE**.

NO : Repair an open in the F CAN-L wire between the PCM (A4) and the DLC terminal No. 14.

CKP PATTERN CLEAR/CKP PATTERN LEARN PROCEDURE

PROCEDURE

1. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.

GETtheMANUALS.org

2. Turn the ignition switch to ON (II).
3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 15: Identifying Data Link Connector (DLC)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. CKP Pattern - Clear/Learn
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.
    4. Select CRANK PATTERN in the ADJUSTMENT MENU with the HDS.
    5. Select CRANK PATTERN CLEAR, and clear the CKP pattern.
    6. Select CRANK PATTERN LEARNING with the HDS, and follow the screen prompts.
    7. After learning, turn the ignition switch to LOCK (0).
    8. Disconnect the HDS from the DLC.

GETtheMANUALS.org

Fig. 16: Identifying Data Link Connector (DLC)

FUEL AND EMISSIONS SYSTEMS DIAGNOSTIC INTERVIEW - ENGINE STALLS

ENGINE STALLS-DIAGNOSTIC INTERVIEW

1. Accessories/modifications	A: No modification	B: Modified
2. Situation when occurred	Booming noise, vibration occurs when deceleration, stopping, engine stalls	
3. Situation when occurred	Engine stalls without vibrations as if stopped by turning off the ignition switch	

ENGINE STALLS CONDITION-POSSIBLE CAUSE PATTERN CHART FROM DIAGNOSTIC INTERVIEW

	Conditions when the engine stalls	Possible causes
Pattern 1	Accessories/modifications	"Hard to start engine", "engine stall" sometimes occurs due to a fault in the ignition system, intake duct, intake manifold, exhaust system. (Intermittent failure may occur due to modification)
Pattern 2	Booming noise, vibration occurs when deceleration, stopping, engine stalls	The following intermittent failure may exist. • Intermittent failure of PGM-FI main relay 2 • Faulty fuel supply (parameter ST FUEL TRIM) • Delay of EGR function (parameter EGR) (only vehicles with EGR) • Delay of VTEC, VTC system function (parameter VTEC) (only vehicles with VTEC or VTC)

GETtheMANUALS.org

		• Delay of lock up operation (parameter SLIP RATIO OF TORQ OR START CLUTCH) (AT vehicle)
Pattern 3	Engine stalls without vibrations as if stopped by turning off the ignition switch	The following intermittent failure may exist. • Intermittent failure of ignition coil relay • Intermittent failure of PGM-FI main relay 1 • Intermittent failure of PGM-FI subrelay

FUEL AND EMISSIONS SYSTEMS DIAGNOSTIC INTERVIEW - ENGINE WILL NOT START, ENGINE STARTS BUT STALLS IMMEDIATELY, OR ENGINE IS HARD TO START

HARD TO START ENGINE-DIAGNOSTIC INTERVIEW

How often does it occur?	**(_____) times/day (_____) times/month**
1. Weather when occurred	A. Warm (temp:_____) B. Sunny C: Cloudy D: Rainy
2. Situation when occurred	A. After an overnight parking, (_____) nights B. Tends to occur about 3 hours after stopping engine C. Parking hours irrelevant
3. Weather when occurred	A. Cold (temp:_____)
• Fuel when occurred	: Filled (_____) months before occurrence
4. Use of specified fuel	A. Use specified fuel only B. Used ethanol-mixed fuel C. Gasoline additive
5. How the starter motor turned when the problem occurred	A. Starter motor turned weaker then usual B. Spinning of starter motor irrelevant
• Cranking operation	A. Keep cranking until the engine starts B. Stop cranking after several seconds: (_____) sec
• Cranking	A. Turn on starter motor immediately after turning the ignition switch to ON(II) B. Turn on starter motor several seconds after turning the ignition switch to ON (II) (after confirming that the check engine indicator goes off)
6. Ground where occurred	A. Level B. Downhill C. Uphill
	A. Full

GETtheMANUALS.org

Fuel level when occurred	B. Half full C. Only a little
7. Aftermarket accessory	A. Modified B. No modification

HARD-TO START CONDITION-POSSIBLE CAUSE PATTERN CHART FROM DIAGNOSTIC INTERVIEW

	Conditions when hard-to-start occurred	Possible causes
Pattern 1	• When in warm climate • Tends to occur approx 3 hours after stopping engine	Check for the EVAP canister purge valve
Pattern 2	Weather when occurred: Windy	When wind is blowing into the exhaust system, the exhaust gas can blow back into the combustion chamber and/or intake manifold, causing long crank times.
Pattern 3	• Weather when occurred: Cold • Fuel filled two months before occurrence	• If summer fuel is used during cold weather, long crank times may occur. • When using fuel that is more than a couple months old (stale fuel), the symptom may disappear with fresh fuel.
Pattern 4	• Use of non-specified fuel • Ethanol mixed, use of additive	• When ethanol fuel or fuel other than specified is mixed, engine stalling may occur. • Poor fuel quality may cause a hard-to-start condition.
Pattern 5	• Immediately crank after turning ignition switch to ON (II) • Starter motor spins weaker than usual	• When cranking, the battery turns starter motor, operates fuel pump to boost fuel pressure to the prescribed level, and gives power to the ignition system to start engine. • When the battery is weak, it takes a long time until the fuel pump boosts fuel pressure to the prescribed level, causing slow start in some cases.
Pattern 6	• Vehicle parked on an uphill or downhill slope • When fuel level is low	When the vehicle is parked on uphill or downhill slope, and the fuel level is low, the fuel pump cannot pickup and pressurize the fuel properly, causing the engine to start slowly.
Pattern 7	• Check for modification in ignition system, intake duct, intake manifold, exhaust system • Inspect amount of oil/fluid/gas (engine oil, ATF, A/C refrigerant)	Hard-to-start engine or engine stall may occur due to modified ignition system, intake duct, intake manifold, exhaust system, use of non-specified engine oil or ATF, or excessive amount of engine oil or ATF (temporary failure may occur due to modification)

ENGINE STALLS

Special Tools Required

Vacuum Pump/Gauge, 0-30 inHg Snap-on YA4000A or equivalent, commercially available

NOTE: Before beginning this troubleshooting:

- Make sure the battery is fully charged.
- Make sure the fuel tank is at least 1/4 full.
- Make sure the engine oil level is correct.

GETtheMANUALS.org

1. DTC check:
   - 1. Turn the ignition switch to ON (II).
   - 2. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame

Are any Pending or Confirmed DTCs indicated?

YES : Go to the indicated DTC's troubleshooting.

NO : Go to step 2.

NOTE: **If the HDS does not communicate with the vehicle, go to the PCM power and ground circuit troubleshooting.**

2. Problem verification:
   - 1. Set the HDS to record a HIGH-SPEED SNAPSHOT of following parameters for 30 seconds.
     - ENGINE SPEED
     - MAF SENSOR
     - ECT SENSOR 1
     - BATTERY
     - CKP NOISE
     - CKP NO PULSE
     - AF FB (ST FUEL TRIM)
     - EVAP PC DUTY
     - MISFIRE
     - A/C CLUTCH
     - PNP SWITCH
     - SLIP RATIO OF TORQ OR START CLUTCH
   - 2. Begin the snapshot, then start the engine and let it idle without load (in P or N).

     Did the engine stall?

     YES : Go to step 4 (diagnosis by parameter (MAF SENSOR)).

     NO : Go to step 3.

3. On-board snapshot check:
   - 1. Check for a record of Engine Stall 2 in the on-board snapshot with the HDS

     Is there a Engine Stall 2 record in the on-board snapshot?

GETtheMANUALS.org

YES : Go to step 4 (diagnosis by parameter (MAF SENSOR)).

NO : Go to step 14 (fuel system troubleshooting).

NOTE: **If an engine stall on-board 2 snapshot was not found, the snapshot may have been lost due to low battery voltage or because of battery disconnection or replacement.**

4. On-board snapshot check (MAF SENSOR):

NOTE: **Use the on-board snapshot in case of intermittent failure, or use the snapshot in case of reproducible failure.**

- 1. Check for a record of Engine Stall 2 in the on-board snapshot or the recorded snapshot with the HDS.
- 2. Select the MAF SENSOR and ENGINE SPEED in the configuration list.

Check the recorded snapshot parameters of the Engine Stall, then compare the MAF SENSOR pattern from the charts, and determine the problem.

Pattern	Symptom (Diagnosis by parameter)	Additional remarks
Pattern 1	Poor connection of MAF  SENSOR	If the engine stalls 1-2 seconds after MAF SENSOR shows "0" g/s the engine stall may be caused by a faulty MAF sensor, poor connection, or electrical noise in the MAF sensor signal.
Pattern 2	MAF SENSOR:  Normal	When the MAF SENSOR pattern matches ENGINE SPEED, the MAF sensor is normal.

Which pattern is indicated?

Pattern 1 Check the MAF sensor for loose terminals or poor connections. If the terminals and connections are OK, **SUBSTITUTE A KNOWN-GOOD MAF SENSOR**.

GETtheMANUALS.org

Pattern 2 The MAF sensor is OK. Go to step 5 (diagnosis by parameter (ECT SENSOR 1)).

5. On-board snapshot check (ECT SENSOR 1):

NOTE: **Use the on-board snapshot in case of intermittent failure, or use the snapshot in case of reproducible failure.**

- 1. Check for a record of Engine Stall 2 in the on-board snapshot or the recorded snapshot with the HDS.
- 2. Select ECT SENSOR 1 and ENGINE SPEED in the configuration list.

Check the recorded snapshot parameters of the Engine Stall, then compare ECT SENSOR 1 pattern from the charts, and determine the problem.

Pattern	Symptom (Diagnosis by parameter)	Additional remarks
Pattern 1	ECT SENSOR 1  high	When ECT SENSOR 1 indicates about 176°F (80 °C) or more when the engine is actually cold, ECT sensor 1 signal may be stuck high. If this occurs, the PCM may not properly compensate for cold engine operation, causing the engine to stall.
Pattern 2	ECT SENSOR 1  normal	If actual engine temp is similar to ECT SENSOR 1, ECT sensor 1 is normal.

Which pattern is indicated?

Pattern 1 Check for a short in ECT sensor 1 circuit and failure in ECT sensor 1.

Pattern 2 ECT sensor 1 is OK. Go to step 6 (diagnosis by parameter (BATTERY)).

6. On-board snapshot check (BATTERY):

NOTE: **Use the on-board snapshot in case of intermittent failure, or use the snapshot in case of reproducible failure.**

GETtheMANUALS.org

- 1. Check for a record of Engine Stall 2 in the on-board snapshot or the recorded snapshot with the HDS.
- 2. Select the BATTERY and ENGINE SPEED in the configuration list.

Check the recorded snapshot parameters of the Engine Stall, then compare the BATTERY pattern from the charts, and determine the problem.

Pattern	Symptom (Diagnosis by parameter)	Additional remarks
Pattern 1	BATTERY voltage  low	• When the BATTERY voltage is excessively low, the PCM or unit stops functioning, causing engine stall. • For PCM or each unit to start (functioning), more than 7.0 V is needed.
Pattern 2	BATTERY voltage  normal	If the BATTERY voltage is above 12 V when the engine stalls, the battery is normal.

Which pattern is indicated?

Pattern 1 **<u>TEST THE BATTERY</u>** , and check the battery cables and terminals.

Pattern 2 The battery is OK. Go to step 7 (diagnosis by parameter (CKP NO PULSE)).

7. On-board snapshot check (CKP NO PULSE):

NOTE: **Use the on-board snapshot in case of intermittent failure, or use the snapshot in case of reproducible failure.**

- 1. Check for a record of Engine Stall 2 in the on-board snapshot or the recorded snapshot with the HDS.
- 2. Select the CKP NO PULSE and ENGINE SPEED in the configuration list.

Check the recorded snapshot parameters of the Engine Stall, then compare the CKP NO PULSE pattern from the charts, and determine the problem.

GETtheMANUALS.org

Pattern	Symptom (Diagnosis by parameter)	Additional remarks
Pattern 1	CKP NO PULSE counts up when  cranking	When CKP NO PULSE counts up, the PCM is not receiving the CKP sensor signal.
Pattern 2	The CKP NO PULSE indicates the pulse is  normal	The CKP sensor signal is OK when the CKP NO PULSE count does not increase.

Which pattern is indicated?

Pattern 1 **DO THE TROUBLESHOOTING PROCEDURE FOR DTC P0335** .

Pattern 2 Go to step 8 (diagnosis by parameter (CKP NOISE)).

8. On-board snapshot check (CKP NOISE):

NOTE: Use the on-board snapshot in case of intermittent failure, or use the snapshot in case of reproducible failure.

- 1. Check for a record of Engine Stall 2 in the on-board snapshot or the recorded snapshot with the HDS.
- 2. Select the CKP NOISE and ENGINE SPEED in the configuration list.

Check the recorded on-board snapshot parameters while the engine stall, then compare the CKP NOISE pattern from these charts, and determine the problem.

Pattern	Symptom (Diagnosis by parameter)	Additional remarks
Pattern 1	CKP NOISE counts up	When CKP NOISE counts up, the PCM is receiving electrical noise along with the CKP sensor signal.

GETtheMANUALS.org

	 up	
Pattern 2	Normal when CKP NOISE does not count  up	The CKP sensor signal is OK when the CKP NOISE count does not increase.

Which pattern is indicated?

Pattern 1 **GO TO THE TROUBLESHOOTING PROCEDURE FOR DTC P0339** . Check for after market accessories.

Pattern 2 The CKP sensor is OK. Go to step 9 (diagnosis by parameter (ST FUEL TRIM)).

9. On-board snapshot check (AF FB (ST FUEL TRIM)):

NOTE: Use the on-board snapshot in case of intermittent failure, or use the snapshot in case of reproducible failure.

- 1. Check for a record of Engine Stall 2 in the on-board snapshot or the recorded snapshot with the HDS.
- 2. Select the AF FB (ST FUEL TRIM) and ENGINE SPEED in the configuration list.

Check the recorded snapshot parameters of the Engine Stall, then compare the AF FB (ST FUEL TRIM) pattern from the charts, and determine the problem.

Pattern	Symptom (Diagnosis by parameter)	Additional remarks
Pattern 1	Engine stalls while AF FB (ST FUEL TRIM) value	If the AF FB (ST FUEL TRIM) value increases when the engine stalls, there may be a lean condition.

GETtheMANUALS.org

	 increases	
Pattern 2	Normal when the engine stalls when AF FB (ST FUEL TRIM) is around 1.0 (center  value)	The fuel trim is normal when the engine stalled with AF FB (ST FUEL TRIM) around 1.0 (center value).
Pattern 3	Engine stalls when AF FB (ST FUEL TRIM) is  around 0.8	When the value of AF FB (ST FUEL TRIM) is around 0.8, the PCM commands the purge control solenoid (PCS) to close (closed when EVAP PC DUTY is 0 %). If the AF FB (ST FUEL TRIM) does not move toward 1.0, the PCS may be leaking.
Pattern 4	Normal when the engine stalls with AF FB (ST FUEL TRIM) is around 1.0 (center  value)	When the value of AF FB (ST FUEL TRIM) is around 0.8, the PCM commands the purge control solenoid (PCS) to close (closed when EVAP PC DUTY is 0 %). If the AF FB moves toward 1.0, the PCS is no leaking.

Which pattern is indicated?

Pattern 1 Diagnostic procedure:

1. Check fuel pump operation sound.

GETtheMANUALS.org

2. **GO TO THE FUEL PRESSURE TEST** .
3. GO TO THE FUEL PUMP CIRCUIT TROUBLESHOOTING .
4. TEST THE PGM-FI MAIN RELAY .
5. **TEST PGM-FI MAIN RELAY 2** .
6. Check for the following fuses:
   - No. A23 (15 A) fuse (in the under-hood fuse/relay box)
   - No. B4 (15 A) fuse (in the under-dash fuse/relay box)

   Pattern 3 Check the PCS for leaks.

   Pattern 2 and 4 Go to step 10 (diagnosis by parameter (MISFIRE)).

10. On-board snapshot check (MISFIRE):

NOTE: **Use the on-board snapshot in case of intermittent failure, or use the snapshot in case of reproducible failure.**

- 1. Check for a record of Engine Stall 2 in the on-board snapshot or the recorded snapshot with the HDS.
- 2. Select the MISFIRE and ENGINE SPEED in the configuration list.

Check the recorded snapshot parameters of the Engine Stall, then compare the MISFIRE pattern from the charts, and determine the problem.

Pattern	Symptom (Diagnosis by parameter)	Additional remarks
Pattern 1	Engine stalls after MISFIRE counts  up	When engine stalls after MISFIRE count increases, the engine stall may be caused by misfire.
Pattern 2	Normal when engine stalls with MISFIRE count	If the MISFIRE count remains constant when the engine stalls, the stall was not caused by misfire.

GETtheMANUALS.org

	 remaining constant	

Which pattern is indicated?

Pattern 1 Diagnostic procedure:

1. When misfire counts up without storing misfire DTC P0300-P0304, **GO TO THE DTC P0300-P0304 TROUBLESHOOTING** .
2. When the misfire count reaches prescribed value, DTC P0300-P0304 is stored. Go to the **DTC P0300: Random Misfire Detected; DTC P0301: No. 1 Cylinder Misfire Detected; DTC P0302: No. 2 Cylinder Misfire Detected; DTC P0303: No. 3 Cylinder Misfire Detected; DTC P0304: No. 4 Cylinder Misfire Detected** .

   Pattern 2 Go to step 11 (diagnosis by parameter (A/C CLUTCH)).

11. On-board snapshot check (A/C CLUTCH):

NOTE: **Use the on-board snapshot in case of intermittent failure, or use the snapshot in case of reproducible failure.**

- 1. Check for a record of Engine Stall 2 in the on-board snapshot or the recorded snapshot with the HDS.
- 2. Select the A/C CLUTCH and ENGINE SPEED in the configuration list.

Check the recorded snapshot parameters of the Engine Stall, then compare the A/C CLUTCH pattern from the charts, and determine the problem.

Pattern	Symptom (Diagnosis by parameter)	Additional remarks
Pattern 1	Engine stalls when A/C is CLUTCH  ON.	If the engine stall occurs just after the A/C compressor clutch turns on, the stall may be caused by excessive A/C compressor load.

GETtheMANUALS.org

Pattern 2	Engine stalls during A/C CLUTCH is  OFF.	If the engine stall occurs just when the A/C compressor clutch is off, the A/C system is not the cause of the engine stall.

Which pattern is indicated?

Pattern 1 Diagnostic procedure:

1. Check for excessive charging of A/C refrigerant.
2. Check for charging of other gas.
3. Check for drag of the A/C compressor.

Pattern 2 Go to step 12 (diagnosis by parameter (PNP SWITCH)).

12. On-board snapshot check (PNP SWITCH):

NOTE: Use the on-board snapshot in case of intermittent failure, or use the snapshot in case of reproducible failure.

- 1. Check for a record of Engine Stall 2 in the on-board snapshot or the recorded snapshot with the HDS.
- 2. Select the PNP SWITCH and the ENGINE SPEED in the configuration list.

Check the recorded snapshot parameters of the Engine Stall, then compare the PNP SWITCH pattern from the charts, and determine the problem.

Pattern	Symptom (Diagnosis by parameter)	Additional remarks
Pattern 1	A/T is in-gear  condition	In-gear condition when PNP SWITCH is "GEAR". Engine stall may be caused by A/T. (Engine also is a factor)
	A/T is N or P condition	

GETtheMANUALS.org

Pattern 2	 condition	N or P condition when PNP SWITCH is "P-N". The engine stall is not caused by A/T. A/T is not faulty.

Which pattern is indicated?

Pattern 1 Go to step 13 (diagnosis by parameter (SLIP RATIO OF TORQ OR START CLUTCH)).

Pattern 2 Go to step 20 (fuse and relay check).

13. On-board snapshot check (SLIP RATIO OF TORQ OR START CLUTCH):

NOTE: Use the on-board snapshot in case of intermittent failure, or use the snapshot in case of reproducible failure.

- 1. Check for a record of Engine Stall 2 in the on-board snapshot or the recorded snapshot with the HDS.
- 2. Select the SLIP RATIO OF TORQ OR START CLUTCH, ENGINE SPEED, VEHICLE SPEED in the configuration list.

Check the recorded on-board snapshot parameters while the engine stall, then chose the SLIP RATIO OF TORQ OR START CLUTCH pattern from these charts, and determine the problem.

Pattern	Symptom (diagnosis by parameter)	Additional remarks
Pattern 1	Engine stall caused by lock  up	When engine stalls, SLIP RATIO OF TORQ OR START CLUTCH is near 100 % from deceleration to stopping, the engine stall is caused by lock up.
Pattern 2	Lock up normal	Lock up is normal when engine stalls with SLIP RATIO OF TORQ OR START CLUTCH near "0" in the middle of deceleration.

GETtheMANUALS.org

	 normal	

Which pattern is indicated?

Pattern 1 Go to the **Automatic Transmission Symptom Troubleshooting Index** for torque converter clutch does not disengage.

Pattern 2 Go to step 14 (fuel system troubleshooting).

14. Fuel pressure check:
    - 1. Do **THE FUEL PRESSURE TEST** .

    Is the fuel pressure OK?

    YES : Go to step 15 (ignition system troubleshooting).

    NO : Check for following pars:

    - FUEL PUMP CIRCUIT
    - FUEL PRESSURE REGULATOR
    - **Fuel filter** See FUEL TANK UNIT DISASSEMBLY AND REASSEMBLY or FUEL TANK UNIT REMOVAL AND INSTALLATION
15. Spark plug visual check:
    - 1. Turn the ignition switch to LOCK (0).
    - 2. **Remove the spark plugs** See FUEL TANK UNIT DISASSEMBLY AND REASSEMBLY or FUEL TANK UNIT REMOVAL AND INSTALLATION .
    - 3. Check conditions of spark plug electrode.

NOTE: **Make sure the spark plugs are the correct part number for the vehicle. If the plugs are aftermarket or they are not the correct part number, replace all of the plugs and retest.**

Is the electrode damage or wet?

YES (wet) : Check the following conditions. If they are OK, go to step 16.

- In very cold conditions, multiple very short trips can cause the spark plug to foul. If this is the case,

GETtheMANUALS.org

drive the vehicle a longer distance and recheck.

- Incorrect or poor quality fuel can cause a wet spark plug. Replace the fuel and recheck.

YES (damaged) : REPLACE THE DAMAGED SPARK PLUGS , determine the cause of the spark plug damage.

NO : Go to step 16.

16. Determine possible failure area (ignition system, others):
    - 1. Select the ALL INJECTORS in the INSPECTION MENU with the HDS, and disable all the injectors.
    - 2. Turn the ignition switch to LOCK (0).
    - 3. Fit spark plug to the ignition coil and ground it to the engine.
    - 4. Crank the engine and watch for spark at the spark plugs.

    Do the spark plugs spark?

    YES : The ignition system is OK. Select PCM reset in the PGM-FI INSPECTION MENU to cancel ALL INJECTORS with the HDS, then go to step 18 (engine compression troubleshooting).

    NO : Go to step 17.

17. Ignition coil power circuit check:
    - 1. Disconnect the following connector(s).

      Ignition coil(s) 3P connector from the problem cylinder

    - 2. Remove the ignition coil relay (A) from the under-hood fuse/relay box.

Fig. 22: Identifying Ignition Coil Relay

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 3. Check for continuity between test points 1 and 2.

  Test condition IG LOCK (0)

  Ignition coil 3P connector: disconnected

  Ignition coil relay: disconnected

  Test circuit IG1(COIL), IG COIL RLY OUT

  Test point 1 Ignition coil 3P connector No. 1 (RED)

  Test point 2 Ignition coil relay 4P socket No. 2 (Under-hood fuse/relay box)

Fig. 23: Checking For Continuity Between Test Points 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The ignition coil power circuit is OK. REPLACE THE IGNITION COIL(S) .

NO : Repair an open in the IG1(COIL)/IG COIL RLY OUT wire between the ignition coil relay and the ignition coil.

18. Engine compression check:
    - 1. DO AN ENGINE COMPRESSION INSPECTION .

      Is the engine compression OK?

      YES : Go to step 19 (EVAP canister purge valve check).

GETtheMANUALS.org

NO : Check for wear or damage to these parts:

- Incorrect valve clearance
- Confirmation of cam timing
- Oil pressure relief valve
- Damage or worn cam lobes
- Damage or worn valve and seats
- Damage cylinder head gasket
- Damage or worn piston rings
- Damage or worn piston and cylinder bore

19. EVAP canister purge valve check:
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Disconnect the following connector.

      EVAP canister purge valve 2P connector

    - 3. Disconnect the vacuum hose (A) from the EVAP canister purge valve (B) in the engine compartment, and connect a vacuum pump/gauge, 0-30 inHg, to the EVAP canister purge valve.

Fig. 24: Identifying Vacuum Hose And EVAP Canister Purge Valve
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    - 4. Start the engine.

      Vacuum occurs in the vacuum pump?

      YES : When the climate is warm, fuel vapor from the tank enters the canister. If the purge control solenoid is leaking, this excessively rich mixture enters the intake manifold causing the engine to

GETtheMANUALS.org

stall. If needed, REPLACE THE EVAP CANISTER PURGE VALVE .

NO (Reproducible failure) : Go to step 20 (fuse check).

NO (Intermittent failure) : Go to step 21 (relay check).

20. Fuse check:
    - 1. Check the following fuses.

      Fuse No. A17 (15 A) to the ignition coil relay

      Fuse No. A18 (15 A) to the PGM-FI subrelay

      Fuse No. A23 (15 A) to PGM-FI main relay 1

      Location Under-hood fuse/relay box

      Fuse No. B4 (15 A) to FGM-FI main relay 2

      Location Under-dash fuse/relay box

      Are the fuses OK?

      YES : The fuses are OK. Go to step 21.

      NO : Replace the blown fuse(s).

21. Relay check:
    - 1. **TEST THE FOLLOWING RELAYS** :

      NOTE: In situations where the failure is difficult to reproduce, the following relays may have intermittent failure.

      - PGM-FI main relay 2
      - Ignition coil relay
      - PGM-FI main relay 1
      - PGM-FI subrelay

      Are the relays OK?

      YES : **GO TO THE DIAGNOSTIC INTERVIEW** .

      NO : Replace any damaged relays.

GETtheMANUALS.org

Fuel and Emissions Systems Symptom Troubleshooting - Engine will not start, engine starts but stalls immediately, or engine is hard to start

Fig. 25: Fuel And Emissions Systems Symptom Troubleshooting Flow Chart - Engine Related Problems (1 Of 6)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

ENGINE WILL NOT START, ENGINE STARTS BUT STALLS IMMEDIATELY, OR ENGINE IS HARD TO START

Special Tools Required

Vacuum Pump/Gauge, 0-30 inHg Snap-on YA4000A or equivalent, commercially available

NOTE: Before beginning this troubleshooting:

- Make sure the battery is fully charged.

GETtheMANUALS.org

- Make sure the fuel tank is at least 1/4 full.
- Make sure the engine oil level is correct.

1. DTC check:
   - 1. Turn the ignition switch to ON (II).
   - 2. Check for Pending or Confirmed DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC	Freeze Frame

Are any Pending or Confirmed DTCs indicated?

YES : Go to the indicated DTC's troubleshooting.

NO : Go to step 2.

NOTE: **If the HDS does not communicate with the vehicle, GO TO THE PCM POWER AND GROUND CIRCUIT TROUBLESHOOTING.**

2. Immobilizer system check:
   - 1. Select HDS immobilizer set-up, select immobilizer information, then select status log.

NOTE: **When the status log count is found, it means the immobilizer system has prohibited the engine from starting in the past.**

The number of status log count shows the frequency that the system has prohibited the engine from starting in the past.

If immobilizer system has not status log count, the system is normal.

Was the status log count found?

YES : **GO TO IMMOBILIZER SYSTEM, STATUS LOG** .

NO : Go to step 3.

3. Problem verification (snapshot sampling):
   - 1. Set the HDS to record a HIGH-SPEED SNAPSHOT of following parameters for 30 seconds.
     - ENGINE SPEED
     - MAP SENSOR
     - MAF SENSOR
     - ECT SENSOR 1
     - BATTERY

GETtheMANUALS.org

- CKP NOISE
- CKP NO PULSE
- CMP NOISE
- CMP NO PULSE
- IMMOBILIZER

  - 2. Begin the snapshot, then try to start the engine.

    Was the engine hard to start?

    YES : Go to step 6 (diagnosis by parameter troubleshooting).

    NO : Go to step 4.

4. On-board snapshot check (engine will not start):
   - 1. Check for a record of Hard to Start Engine in the on-board snapshot with the HDS.

   Hard to Start Engine in the on-board snapshot recorded?

   YES : Go to step 6 (diagnosis by parameter troubleshooting).

   NO : Go to step 5.

5. On-board snapshot check (engine stall):
   - 1. Check for a record of Engine Stall 2 in the on-board snapshot with the HDS.

   NOTE: When Hard to Start on-board snapshot data was not recorded, use the Engine Stall on-board snapshot data and check the cause of failure.

   Engine Stall as on-board snapshot recorded?

   YES : Go to step 18 (diagnosis by parameter (ST FUEL TRIM)).

   NO : Go to step 20 (fuel system troubleshooting).

   NOTE: In the following conditions, the on-board snapshot will not be recorded when the engine stalls.

   - Ignition switch turned to LOCK (0) shortly after starting the engine.
   - Vehicle is out of the Hard to start condition to record an on-board snapshot (see the gray zone of following graph).
   - Low or dead battery
   - Disconnecting the battery

GETtheMANUALS.org

ECT SENSOR 1 (°F (°C))	-40 (-40)	-22 (-30)	-13 (-25)	-4 (-20)	5 (-15)	14 (-10)	194 (90)
Start time (sec)	20	10	5	3.5	2.5	1.5	1.5

Fig. 31: Snapshot Of Hard To Start Engine On-Board
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. On-board snapshot or snapshot check (IMMOBILIZER):

NOTE: **Use the on-board snapshot in case of intermittent failure, or use the snapshot in case of reproducible failure.**

- 1. Select the Hard to Start Engine in the on-board snapshot or snapshot with the HDS.
- 2. Select the IMMOBILIZER and ENGINE SPEED in the configuration list.

Compare the snapshot parameters while the engine is cranking, from the chart, to determine the problem.

Pattern	Symptom (Diagnosis by parameter)	Additional remarks
Pattern 1	IMMOBILIZER  inhibit IMMOBILIZER inhibit	When IMMOBILIZER becomes "BAN" during cranking or after start, the fuel pump is stopped by IMMOBILIZER inhibit. • No failure in the engine

GETtheMANUALS.org

	 inhibit	
Pattern 2	IMMOBILIZER permit  Normal IMMOBILIZER permit  Normal	IMMOBILIZER is normal when IMMOBILIZER is "permit" when cranking or after start.

Which pattern is indicated?

Pattern 1 The immobilizer system has failure. **GO TO THE IMMOBILIZER SYSTEM CHECK** .

Pattern 2 The immobilizer system is OK. Go to step 7 (diagnosis by parameter (ENGINE SPEED)).

7. On-board snapshot or snapshot check (ENGINE SPEED):

NOTE: **Use the on-board snapshot in case of intermittent failure, or use the snapshot in case of reproducible failure.**

- 1. Select the Hard to Start Engine in the on-board snapshot or snapshot with the HDS.
- 2. Select the ENGINE SPEED pattern chart in the configuration list.

Check the recorded snapshot parameters while the engine is cranking, then compare the pattern from the chart, and determine the problem.

Pattern	Symptom (Diagnosis by parameter)	Additional remarks
	ENGINE SPEED when cranking is normal	

GETtheMANUALS.org

Pattern 1	normal 	
Pattern 2	ENGINE SPEED when cranking is low 	When ENGINE SPEED during cranking is low, weak battery or increased engine friction can be considered.

Which pattern is indicated?

Pattern 1 The engine cranking speed is OK. Go to step 8 (diagnosis by parameter (BATTERY)).

Pattern 2 Diagnostic procedure:

1. **TEST THE BATTERY** .
2. Check the battery cables and connections.
3. Check the starter; **KA KC models, KX model** See **STARTER OVERHAUL** or **STARTER OVERHAUL** or **STARTER REMOVAL, INSTALLATION, AND PERFORMANCE TEST** .
4. Check the engine friction.

8. On-board snapshot or snapshot check (BATTERY):

NOTE: Use the on-board snapshot in case of intermittent failure, or use the snapshot in case of reproducible failure.

- 1. Select the Hard to Start Engine in the on-board snapshot or snapshot with the HDS.
- 2. Select the BATTERY and ENGINE SPEED in the configuration list.

Check the recorded snapshot parameters while the engine is cranking, then compare the BATTERY pattern from the chart, and determine the problem.

Pattern	Symptom (Diagnosis by parameter)	Additional remarks
Pattern 1	BATTERY voltage low when cranking 	• When BATTERY voltage during cranking is too low, there is a possibility that PCM and/or engine is unable to start. • The PCM and other system units require 7.0 V or more to start.
	BATTERY voltage normal when cranking	

GETtheMANUALS.org

Pattern 2	 cranking	To start the engine, 7.0 V or more is needed.

Which pattern is indicated?

Pattern 1 Diagnostic procedure:

1. **<u>TEST THE BATTERY</u>** .
2. Check the battery cables and connections.

Pattern 2 The battery is OK. Go to step 9 (diagnosis by parameter (ECT SENSOR 1)).

9. On-board snapshot or snapshot check (ECT SENSOR 1):

NOTE: Use the on-board snapshot in case of intermittent failure, or use the snapshot in case of reproducible failure.

- 1. Select the Hard to Start Engine in the on-board snapshot or snapshot with the HDS.
- 2. Select ECT SENSOR 1 and ENGINE SPEED in the configuration list.

Check the recorded snapshot parameters while the engine is cranking, then compare the ECT SENSOR 1 pattern from the chart, and determine the problem.

Pattern	Symptom (Diagnosis by parameter)	Additional remarks
Pattern 1	ECT SENSOR 1 high when  cranking	When ECT SENSOR 1 indicates about 144 °F (80 °C) or more when the engine is cold (engine temp low), ECT sensor 1 may be stuck high. ECT compensation is not applied after the engine is warmed up, it is not necessary to check the ECT sensor (not a faulty part)
Pattern 2	ECT SENSOR 1 normal when cranking	If actual engine temp is nearly same as the temp detected by ECT sensor 1

GETtheMANUALS.org

	 cranking	when cranking, ECT sensor 1 is normal.

Which pattern is indicated?

Pattern 1 Check for a short in ECT sensor 1 circuit and failure in ECT sensor 1.

Pattern 2 ECT sensor 1 is OK. Go to step 10 (diagnosis by parameter (MAP SENSOR)).

10. On-board snapshot or snapshot check (MAP SENSOR):

NOTE: Use the on-board snapshot in case of intermittent failure, or use the snapshot in case of reproducible failure.

- 1. Select the Hard to Start Engine in the on-board snapshot or snapshot with the HDS.
- 2. Select the MAP sensor and ENGINE SPEED in the configuration list.

Check the recorded snapshot parameters while the engine is cranking, then compare the MAP SENSOR pattern from the chart, and determine the problem.

Pattern	Symptom (Diagnosis by parameter)	Additional remarks
Pattern 1	MAP Sensor detects no change of pressure when  cranking	When MAP SENSOR detects no change of pressure when cranking, the pressure measurement port may be clogged. The PCM decides basic duration time of fuel injection from engine speed and MAP sensor signal when cranking.
Pattern 2	Normal when MAP sensor detects vacuum when  cranking	When MAP Sensor detects vacuum while cranking, the condition is normal, without any clogging.

GETtheMANUALS.org

Which pattern is indicated?

Pattern 1 Check the port of MAP sensor for clogging. If port is OK, **SUBSTITUTE A KNOWN-GOOD MAP SENSOR** . Also check for clogging in the exhaust system.

Pattern 2 (Reproducible failure) The MAP sensor is OK. Go to step 11 (diagnosis by parameter (MAF SENSOR)).

Pattern 2 (Intermittent failure) The MAP sensor is OK. Go to step 12 (diagnosis by parameter (CMP NO PULSE)).

11. Snapshot check (MAF SENSOR):
    - 1. Select the Hard to Start Engine in the snapshot with the HDS.
    - 2. Select the MAF sensor and ENGINE SPEED in the configuration list.

    Check the recorded snapshot parameters while the engine is cranking, then compare the MAF SENSOR pattern from the chart, and determine the problem.

Pattern	Symptom (Diagnosis by parameter)	Additional remarks
Pattern 1	Poor connection of MAF  sensor	Complete combustion stall: When MAF SENSOR indicates "0" 1 -2 sec before ENGINE SPEED becomes 0 rpm, or when "0" is shown like noise, poor connection of MAF SENSOR connector may exist.
Pattern 2	MAF sensor output  incorrect	When MAF SENSOR shows "0" when cranking or after start, the MAF sensor's measurement point or a poor connection may exist.
Pattern 3	MAF sensor: Normal	When MAF SENSOR output compares with ENGINE SPEED when cranking or after start, MAF SENSOR is normal.

GETtheMANUALS.org

	 Normal	

Which pattern is indicated?

Pattern 1 and 2 Check for loose terminal or poor connection at the MAF sensor. If the terminals and connections are OK, **SUBSTITUTE A KNOWN-GOOD MAF SENSOR** .

Pattern 3 The MAF sensor is OK. Go to step 12 (diagnosis by parameter (CMP NO PULSE)).

12. On-board snapshot or snapshot check (CMP NO PULSE):

NOTE: Use the on-board snapshot in case of intermittent failure, or use the snapshot in case of reproducible failure.

- 1. Select the Hard to Start Engine in the on-board snapshot or snapshot with the HDS.
- 2. Select the CMP NO PULSE and ENGINE SPEED in the configuration list.

Check the recorded snapshot parameters while the engine is cranking, then compare the CMP NO PULSE pattern from the chart, and determine the problem.

Pattern	Symptom (Diagnosis by parameter)	Additional remarks
Pattern 1	CMP NO PULSE count increases when  cranking	When CMP NO PULSE count increases when cranking, no CMP pulse is received. If the CMP pulse is not received, the PCM cannot detect the cylinder to be ignited and engine is unable to start.
Pattern 2	The CMP NO PULSE indicates the pulse is  normal	It is normal, when CMP NO PULSE count does not increase and pulse is received when cranking.

GETtheMANUALS.org

Which pattern is indicated?

Pattern 1 **DO THE TROUBLESHOOTING PROCEDURE FOR DTC P0365** . If the CMP NO PULSE count reaches the threshold, DTC P0365 will set. Check for poor connections and loose terminals at the CMP sensor.

Pattern 2 Go to step 13 (diagnosis by parameter (CMP NOISE)).

13. On-board snapshot or snapshot check (CMP NOISE):

NOTE: Use the on-board snapshot in case of intermittent failure, or use the snapshot in case of reproducible failure.

- 1. Select the Hard to Start Engine in the on-board snapshot or snapshot with the HDS.
- 2. Select the CMP NOISE and ENGINE SPEED in the configuration list.

Check the recorded snapshot parameters while the engine is cranking, then compare the CMP NOISE pattern from the chart, and determine the problem.

Pattern	Symptom (Diagnosis by parameter)	Additional remarks
Pattern 1	CMP NOISE count increases when  cranking	When CMP NOISE count increases when cranking, there is noise in the CMP signal. When CMP signal has noise, the PCM cannot detect the cylinder to be ignited and engine is unable to start.
Pattern 2	The CMP NOISE indicates the pulse is  normal	It is normal, when CMP NOISE count does not increase when cranking.

Which pattern is indicated?

Pattern 1 **DO THE TROUBLESHOOTING PROCEDURE FOR DTC P0369** . If the CMP NOISE count reaches the threshold, DTC P0369 will set. Check for poor connections and loose terminals at the CMP sensor.

Pattern 2 The CMP sensor is OK. Go to step 14 (diagnosis by parameter (CKP NO PULSE)).

GETtheMANUALS.org

14. On-board snapshot or snapshot check (CKP NO PULSE):

NOTE: **Use the on-board snapshot in case of intermittent failure, or use the snapshot in case of reproducible failure.**

- 1. Select the Hard to Start Engine in the on-board snapshot or snapshot with the HDS.
- 2. Select the CKP NO PULSE and ENGINE SPEED in the configuration list.

Check the recorded snapshot parameters while the engine is cranking, then compare the CKP NO PULSE pattern from the chart, and determine the problem.

Pattern	Symptom (Diagnosis by parameter)	Additional remarks
Pattern 1	CKP NO PULSE counts up when  cranking	When the CKP NO PULSE count increases when cranking, the PCM cannot receive correct CKP pulse.
Pattern 2	The CKP NO PULSE indicates the pulse is  normal	It is normal, when the CKP NO PULSE count does not increase and pulse is received when cranking.

Which pattern is indicated?

Pattern 1 **DO THE TROUBLESHOOTING PROCEDURE FOR DTC P0335** . If the CKP NO PULSE count reaches the threshold, DTC P0335 will set. Check for poor connections and loose terminals at the CKP sensor.

Pattern 2 Go to step 15 (diagnosis by parameter (CKP NOISE)).

15. On-board snapshot or snapshot check (CKP NOISE):

NOTE: **Use the on-board snapshot in case of intermittent failure, or use the snapshot in case of reproducible failure.**

- 1. Select the Hard to Start Engine in the on-board snapshot or snapshot with the HDS.
- 2. Select the CKP NOISE and ENGINE SPEED in the configuration list.

GETtheMANUALS.org

Check the recorded snapshot parameters while the engine is cranking, then compare the CKP NOISE pattern from the chart, and determine the problem.

Pattern	Symptom (Diagnosis by parameter)	Additional remarks
Pattern 1	CKP NOISE counts up when  cranking	When the CKP NOISE count increases during cranking, there is noises in the CKP signal. When CKP signal has, noise, the PCM cannot detect the cylinder to be ignited and engine is unable to start.
Pattern 2	Normal when CKP NOISE does not count up when  cranking	It is normal, when CKP NOISE count does not increase when cranking.

Which pattern is indicated?

Pattern 1 **DO THE TROUBLESHOOTING PROCEDURE FOR DTC P0339** . If the CKP NOISE count reaches the threshold, DTC P0339 will set. Check for poor connections and loose terminals at the CKP sensor, and also check for aftermarket accessories.

Pattern 2 (Reproducible failure) The CKP sensor is OK. Go to step 16 (diagnosis by parameter (VTEC PRES SW)).

Pattern 2 (Intermittent failure) The CKP sensor is OK. Go to step 17 (diagnosis by parameter (Engine Stall in the on-board snapshot)).

16. Snapshot check (VTEC PRES SW):
    - 1. Check the parameter(s) below with the HDS when the engine is cranking.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
VTEC PRES SW	OFF			

Do the current condition(s) match the threshold?

YES : SUBSTITUTE A KNOWN-GOOD ROCKER ARM OIL CONTROL VALVE . If the valve is OK, **replace the oil pump** See ENGINE OIL PUMP OVERHAUL or ENGINE OIL PUMP REMOVAL AND INSTALLATION .

GETtheMANUALS.org

NO : Go to step 20 (fuel system troubleshooting).

17. On-board snapshot check (Engine Stall):
    - 1. Check for a record of Engine Stall 2 in the on-board snapshot with the HDS.

Engine stall in the on-board snapshot recorded?

YES : Go to step 18 (diagnosis by parameter (ST FUEL TRIM)).

NO : Go to step 20 (fuel system troubleshooting).

18. On-board snapshot check (ST FUEL TRIM):
    - 1. Check for a record of Engine Stall 2 in the on-board snapshot with the HDS.
    - 2. Select the ST FUEL TRIM and ENGINE SPEED in the configuration list.

    Check the recorded snapshot parameters when the Engine Stalls, then compare the ST FUEL TRIM pattern from the chart, and determine the problem.

Pattern	Symptom (Diagnosis by parameter)	Additional remarks
Pattern 1	Engine stalls while ST FUEL TRIM value  increasing	When the engine stalls while ST FUEL TRIM value increasing, a failure may exist in the fuel system.
Pattern 2	Normal when the engine stalls when ST FUEL TRIM is around 1.0 (center  value)	The fuel is normal when the engine stalled with ST FUEL TRIM around 1.0 (center value) until the engine stall.

Which pattern is indicated?

Pattern 1 Diagnostic procedure:

1. Check fuel pump operation sound.
2. GO TO THE FUEL PRESSURE TEST .

GETtheMANUALS.org

3. GO TO THE FUEL PUMP CIRCUIT TROUBLESHOOTING .
4. **TEST THE PGM-FI MAIN RELAY** .
5. **TEST PGM-FI MAIN RELAY 2** .
6. Check for the following fuses:
- No. A21 (15 A) fuse (in the under-hood fuse/relay box)
- No. B4 (15 A) fuse (in the under-dash fuse/relay box)

Pattern 2 Go to step 19 (diagnosis by parameter (MISFIRE)).

19. On-board snapshot check (MISFIRE):
    - 1. Check for a record of Engine Stall 2 in the on-board snapshot with the HDS.
    - 2. Select the MISFIRE and ENGINE SPEED in the configuration list.

    Check the recorded snapshot parameters when the engine stalls, then compare the MISFIRE pattern from the chart, and determine the problem.

Pattern	Symptom (Diagnosis by parameter)	Additional remarks
Pattern 1	Engine stalls after MISFIRE counts  increase	When engine stalls after the MISFIRE count increases, the engine stall may be caused by misfire. Also the misfire may be caused by a loss of compression, faulty ignition system, faulty fuel system, etc.
Pattern 2	Normal when engine stalls with MISFIRE count remaining  constant	If the MISFIRE count remains constant when the engine stalls, the stall was not caused by a misfire.

Which pattern is indicated?

Pattern 1 Do the troubleshooting procedure for **DTC P0300: Random Misfire Detected; DTC P0301: No. 1 Cylinder Misfire Detected; DTC P0302: No. 2 Cylinder Misfire Detected; DTC P0303: No. 3 Cylinder Misfire Detected; DTC P0304: No. 4 Cylinder Misfire Detected** .

GETtheMANUALS.org

Pattern 2 Go to step 20 (fuel system troubleshooting).

20. Fuel pressure check:
    - 1. DO THE FUEL PRESSURE TEST .

    Is the fuel pressure OK?

    YES : Go to step 21 (ignition system troubleshooting).

    NO : Check the following:

    - FUEL PUMP CIRCUIT
    - **Fuel pressure regulator** See FUEL TANK UNIT DISASSEMBLY AND REASSEMBLY or FUEL TANK UNIT REMOVAL AND INSTALLATION
    - **Fuel filter** See FUEL TANK UNIT DISASSEMBLY AND REASSEMBLY or FUEL TANK UNIT REMOVAL AND INSTALLATION
21. Spark plug visual check:
    - 1. Turn the ignition switch to LOCK (0).
    - 2. REMOVE THE SPARK PLUGS .
    - 3. Check the conditions of the spark plug electrode.

    NOTE: Make sure the plugs are genuine parts.

    Is the electrode damaged or wet?

    YES (wet) : Check the following conditions. If they are OK, go to step 22.

    - In very cold conditions, multiple very short trips can cause the spark plug to foul. If this is the case, drive the vehicle a longer distance and recheck.
    - Incorrect or poor quality fuel can cause a wet spark plug. Replace the fuel and recheck.

    YES (damaged) : REPLACE THE DAMAGED SPARK PLUGS , determine the cause of the spark plug damage.

    NO : Go to step 22.

22. Determine possible failure area (ignition system, others):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Select ALL INJECTORS in the INSPECTION MENU with the HDS, and stop fuel injection from injector.
    - 3. Fit spark plug to the ignition coil and ground it to the engine.
    - 4. Crank the engine and watch for spark at the spark plug.

    Is there spark?

GETtheMANUALS.org

YES : The ignition system is OK. Select PCM reset in the INSPECTION MENU to cancel ALL INJECTORS with the HDS, then go to step 24 (engine compression troubleshooting).

NO : Go to step 23.

23. Ignition coil power circuit check:
    - 1. Disconnect the following connector(s).

      Ignition coil(s) 3P connector from the problem cylinder

    - 2. Remove the ignition coil relay (A) from the under-hood fuse/relay box.

Fig. 32: Identifying Ignition Coil Relay
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    - 3. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      Ignition coil 3P connector: disconnected

      Ignition coil relay: disconnected

      Test circuit IG1(COIL), IG COIL RLY OUT

      Test point 1 Ignition coil 3P connector No. 1 (RED)

      Test point 2 Ignition coil relay 4P socket No. 2 (Under-hood fuse/relay box)

GETtheMANUALS.org

Fig. 33: Checking For Continuity Between Test Points 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The ignition coil power circuit is OK. REPLACE THE IGNITION COIL(S) .

NO : Repair an open in the IG1(COIL)/IG COIL RLY OUT wire between the ignition coil relay and the ignition coil.

24. Engine compression check:
    - 1. DO AN ENGINE COMPRESSION INSPECTION .

NOTE: When removing the spark plugs, make sure the plugs are genuine parts.

Is engine compression OK?

YES : Go to step 25 (EVAP canister purge valve check).

NO : Repair the cause of low compression.

25. EVAP canister purge valve check:
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Disconnect the following connector.

      EVAP canister purge valve 2P connector

    - 3. Disconnect the vacuum hose (A) from the EVAP canister purge valve (B) in the engine compartment, and connect a vacuum pump/gauge, 0-30 inHg, to the purge valve.

GETtheMANUALS.org

Fig. 34: Identifying Vacuum Hose And EVAP Canister Purge Valve
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 4. Start the engine.

  Is there vacuum?

  YES : **REPLACE THE EVAP CANISTER PURGE VALVE** .

  NO (Reproducible failure) : Go to step 26 (fuse check).

  NO (Intermittent failure) : Go to step 27 (relay check).

26. Fuse check:
    - 1. Check the following fuses.

      Fuse No. A17 (15 A) to the ignition coil relay

      Fuse No. A18 (15 A) to the PGM-FI subrelay

      Fuse No. A23 (15 A) to PGM-FI main relay 1

      Location Under-hood fuse/relay box

      Fuse No. B4 (15 A) to PGM-FI main relay 2

      Location Under-dash fuse/relay box

      Are the fuses OK?

GETtheMANUALS.org

YES : The fuses are OK. Go to step 27 (relay check).

NO : Replace the blown fuse(s).

27. Relay check:
    - 1. **TEST THE FOLLOWING RELAYS** :

NOTE: **In case the failure is not reproduced, the following relays may have intermittent failure.**

- PGM-FI main relay 2
- Ignition coil relay
- PGM-FI main relay 1
- PGM-FI subrelay

Are the relays OK?

YES : **Go to the Diagnostic Interview** See **FUEL AND EMISSIONS SYSTEMS DIAGNOSTIC INTERVIEW - ENGINE STALLS** or **FUEL AND EMISSIONS SYSTEMS DIAGNOSTIC INTERVIEW - ENGINE WILL NOT START, ENGINE STARTS BUT STALLS IMMEDIATELY, OR ENGINE IS HARD TO START**.

NO : Replace the damaged relays.

IDLE SPEED INSPECTION

INSPECTION

1. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

GETtheMANUALS.org

Fig. 35: Identifying Data Link Connector (DLC)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Warm Up The Engine

   Start the engine. Hold the engine speed at 3, 00 rpm without load in P or N until the radiator fan comes on, then let it idle.

3. Idle Speed - Inspection
   1. Check the idle speed under no load conditions: headlights, blower fan, radiator fan, audio system, and air conditioner off.

      Idle speed should be:

      760±50 rpm (in P or N)

   2. 2. Let the engine idle for 1 minute with high electric load (A/C switch on, temperature set to max cool, blower fan on High, and headlights on high beam).

      Idle speed should be:

      760±50 rpm (in P or N)

      NOTE: **If the idle speed is not within specification, do the PCM idle learn procedure. If the idle speed is still not within specification, go to symptom troubleshooting.**

GETtheMANUALS.org

Fig. 36: MIL Circuit Troubleshooting Flow Chart
Courtesy of AMERICAN HONDA MOTOR CO., INC.

MIL CIRCUIT TROUBLESHOOTING

1. Gauge control module check:
   - 1. Turn the ignition switch to ON (II).
   - 2. **DO THE GAUGE SELF-DIAGNOSTIC FUNCTION** .

     Does the MIL flash?

     YES : Go to step 2.

     NO : **Substitute a known-good gauge control module** See **GAUGE CONTROL MODULE REMOVAL AND INSTALLATION** or **Rewriting the ODO Data and Transferring the Maintenance Minder™ Data to a New Gauge Control Module** , then recheck. If the symptom/indication goes away with a known-good gauge control module, **replace the original gauge control module** See **GAUGE CONTROL MODULE REMOVAL AND INSTALLATION** or **Rewriting the ODO Data and Transferring the Maintenance Minder™ Data to a New Gauge Control Module** .

2. PCM check:
   - 1. Connect the HDS to the DLC.
   - 2. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	

GETtheMANUALS.org

	Values	Unit	Values	Unit
SCS	Short			

Do the current condition(s) match the threshold?

YES : Go to step 3.

NO : **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE**, then recheck. If the symptom/indication goes away and the PCM was updated, troubleshooting is complete. If the symptom/indication goes away and the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE**.

3. Shorted wire check (SCS line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     PCM connector A (49P)

   - 3. Disconnect the HDS.
   - 4. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     PCM connector A (49P): disconnected

     Test circuit SCS

     Test point 1 PCM connector A (49P) No. 42 (ORN)

     Test point 2 Body ground

Fig. 37: Checking For Continuity Between Test Points 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

Is there continuity?

YES : Repair a short in the SCS wire between the PCM (A42) and the DLC.

NO : The SCS wire is OK. **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE**, then recheck. If the symptom/indication goes away and the PCM was updated, troubleshooting is complete. If the symptom/indication goes away and the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE**.

PCM IDLE LEARN PROCEDURE

PROCEDURE

1. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 38: Identifying Data Link Connector (DLC)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. PCM - Reset
    1. Reset the PCM with the HDS while the engine is stopped.
    2. Turn the ignition switch to LOCK (0).
    3. Turn the ignition switch to ON (II), and wait 30 seconds.
3. Warm Up The Engine

GETtheMANUALS.org

Start the engine. Hold the engine speed at 3, 00 rpm without load in P or N until the radiator fan comes on, then let it idle.

4. PCM - Idle Learn
    1. Let the engine idle for about 5 minutes with the throttle fully closed.

        NOTE: If the radiator fan comes on, do not include its running time in the 5 minutes.

    2. After learning, turn the ignition switch to LOCK (0).

GETtheMANUALS.org

PCM Power and Ground Circuit Troubleshooting

Fig. 39: PCM Power And Ground Circuit Troubleshooting Flow Chart (1 Of 3)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

Fig. 40: PCM Power And Ground Circuit Troubleshooting Flow Chart (2 Of 3)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

Fig. 41: PCM Power And Ground Circuit Troubleshooting Flow Chart (3 Of 3)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

PCM POWER AND GROUND CIRCUIT TROUBLESHOOTING

1. Engine starting check:
   - 1. Try to start the engine.

     Does the engine start and idle smoothly?

     YES : **GO TO THE F-CAN CIRCUIT TROUBLESHOOTING** .

     NO : Go to step 2.

2. Determine possible failure area (+B IG MAIN wire shorted, others):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check the following fuse.

GETtheMANUALS.org

Fuse No. A2-1 (50 A)

Location Under-hood fuse/relay box

Is the fuse OK?

YES : Repair an open in the +B IG MAIN wire between the No. A2-1 (50 A) fuse and the ignition switch. If the wire is OK, go to step 3.

NO : Repair a short in the +B IG MAIN wire between the No. A2-1 (50 A) fuse and the under-hood fuse/relay box. Also replace the No. A2-1 (50 A) fuse.

3. Fuse check:
   - 1. Check the following fuse.

     Fuse No. A23 (15 A)

     Location Under-hood fuse/relay box

     Is the fuse OK?

     YES : Go to step 8.

     NO : Go to step 4.

4. Determine possible failure area (+B IGP line, others):
   - 1. Remove the blown No. A23 (15 A) fuse from the under-hood fuse/relay box.
   - 2. Remove PGM-FI main relay 1 (A) from the under-dash fuse/relay box.

Fig. 42: Identifying PGM-FI Main Relay 1
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

- 3. Check for continuity between test points 1 and 2.

  Test condition IG LOCK (0)

  PGM-FI main relay 1: disconnected

  Test circuit +B IGP

  Test point 1 PGM-FI main relay 1 4P socket No. 1 (Under-dash fuse/relay box)

  Test point 2 Body ground

  Test circuit +B IGP

  Test point 1 PGM-FI main relay 1 4P socket No. 4 (Under-dash fuse/relay box)

  Test point 2 Body ground

Fig. 43: Checking For Continuity Between Test Points 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Go to step 5.

NO : Go to step 6.

5. Shorted wire check (+B IGP line):
   - 1. Disconnect the following connector.

     Under-dash fuse/relay box connector D (32P)

   - 2. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

GETtheMANUALS.org

PGM-FI main relay 1: disconnected

Under-dash fuse/relay box connector D (32P): disconnected

Test circuit +B IGP

Test point 1 Under-dash fuse/relay box connector D (32P) No. 9 (BLU)

Test point 2 Body ground

Fig. 44: Checking For Continuity Between Test Points 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short in the +B IGP wire between the No. A23 (15 A) fuse and the under-dash fuse/relay box. Also replace the No. A23 (15 A) fuse.

NO : The +B IGP wire is OK. Replace the under-hood fuse/relay box. Also replace the No. A23 (15 A) fuse.

6. Part(s) internal circuit check (short in FI MAIN RLY OUT line):
   - 1. Disconnect each of the parts or connectors below, one at a time, then check for continuity between test points 1 and 2.
   - PGM-FI main relay 2
   - PCM connector A (49P)
   - Each injector 2P connector
   - CMP sensor B 3P connector
   - CKP sensor 3P connector
   - Electronic throttle control system (ETCS) control relay

Test condition IG LOCK (0)

Test circuit FI MAIN RLY OUT

GETtheMANUALS.org

Test point 1 PGM-FI main relay 1 4P socket No. 2 (Under-hood fuse/relay box)

Test point 2 Body ground

Fig. 45: Checking For Continuity Between Test Points 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Does continuity go away when one of the above components is disconnected?

YES : Replace the part that made the short to body ground go away when it was disconnected. If the part is the PCM, replace it or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE**, then recheck. If the symptom/indication goes away and the PCM was updated, troubleshooting is complete. If the symptom/indication goes away and the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE**. Also replace the No. A23 (15 A) fuse.

NO : Parts are OK. Go to step 7.

7. Shorted wire check (FI MAIN RLY OUT line):
   - 1. Jump the SCS line with the HDS.
   - 2. Disconnect the following parts:
     - PGM-FI main relay 2
     - PCM connector A (49P)
     - Injectors
     - CMP sensor B
     - CKP sensor
     - Electronic throttle control system (ETCS) control relay
   - 3. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     PGM-FI main relay 1: disconnected

     PGM-FI main relay 2: disconnected

GETtheMANUALS.org

PCM connector A (49P): disconnected

Each injector 2P connector: disconnected

CMP sensor B 3P connector: disconnected

CKP sensor 3P connector: disconnected

Electronic throttle control system (ETCS) control relay: disconnected

Test circuit FI MAIN RLY OUT

Test point 1 PGM-FI main relay 1 4P socket No. 2 (Under-dash fuse/relay box)

Test point 2 Body ground

Fig. 46: Checking For Continuity Between Test Points 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Does continuity go away when one of the above components is disconnected?

YES : Repair a short in the FI MAIN RLY OUT wire between PGM-FI main relay 1 and each part. Also replace the No. A23 (15 A) fuse.

NO : The FI MAIN RLY OUT wire is OK. Replace PGM-FI main relay 1. Also replace the No. A23 (15 A) fuse.

8. Fuse check 2:
   - 1. Check the following fuse.

     Fuse No. B4 (15 A)

     Location Under-dash fuse/relay box

     Is the fuse OK?

GETtheMANUALS.org

YES : Go to step 13.

NO : Go to step 9.

9. Relay check:
   - 1. Remove the blown No. B4 (15 A) fuse from the under-hood fuse/relay box.
   - 2. Remove PGM-FI main relay 2 (A) from the under-dash fuse/relay box.

Fig. 47: Identifying PGM-FI Main Relay 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

   - 3. **TEST PGM-FI MAIN RELAY 2** .

Is the relay OK?

YES : PGM-FI main relay 2 is OK. Go to step 10.

NO : Replace PGM-FI main relay 2. Also replace the No. B4 (15 A) fuse.

10. Determine possible failure area (IG1 FUEL PUMP line, others):
   - 1. Check for continuity between test points 1 and 2.

Test condition IG LOCK (0)

PGM-FI main relay 2: disconnected

Test circuit IG1 FUEL PUMP

Test point 1 PGM-FI main relay 2 4P socket No. 2 (Under-dash fuse/relay box)

Test point 2 Body ground

GETtheMANUALS.org

Fig. 48: Checking For Continuity Between Test Points 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Go to step 11.

NO : Go to step 12.

11. Shorted wire check (IG1(F/P) line):
    - 1. Jump the SCS line with the HDS.
    - 2. Disconnect the following connector.

      PCM connector C (49P)

    - 3. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      PGM-FI main relay 2: disconnected

      PCM connector C (49P): disconnected

      Test circuit IG1(F/P)

      Test point 1 PCM connector C (49P) No. 10 (WHT)

      Test point 2 Body ground

GETtheMANUALS.org

Fig. 49: Checking For Continuity Between Test Points 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short in the IG1(F/P) wire between the No. B4 (15 A) fuse and the PCM (C10), between the No. B4 (15 A) fuse and PGM-FI main relay 2, or between the No. B4 (15 A) fuse and the immobilizer control unit. Also replace the No. B4 (15 A) fuse.

NO : The IG1(F/P) wire is OK. Replace the No. B4 (15 A) fuse, and **update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE**, then recheck. If the symptom/indication goes away and the PCM was updated, troubleshooting is complete. If the symptom/indication goes away and the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE**.

12. Shorted wire check (FUEL PUMP RLY OUT line):
    - 1. Remove the access panel from the floor.
    - 2. Disconnect the following connector.

      Fuel tank unit 4P connector

    - 3. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      PGM-FI main relay 2: disconnected

      Fuel tank unit 4P connector: disconnected

      Test circuit FUEL PUMP RLY OUT

      Test point 1 Fuel tank unit 4P connector No. 1 (GRN)

      Test point 2 Body ground

GETtheMANUALS.org

Fig. 50: Checking For Continuity Between Test Points 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short in the FUEL PUMP RLY OUT wire between the fuel tank unit 4P connector and PGM-FI main relay 2. Also replace the No. B4 (15 A) fuse.

NO : The FUEL PUMP RLY OUT wire is OK. Check the fuel pump, and replace it if needed. Also replace the No. B4 (15 A) fuse.

13. Open wire check (IG1(F/P) line):
    - 1. Jump the SCS line with the HDS.
    - 2. Disconnect the following connectors.

      PCM connector A (49P)

      PCM connector C (49P)

    - 3. Turn the ignition switch to ON (II).
    - 4. Measure the voltage between test points 1 and 2.

      Test condition IG ON (II)

      PCM connector A (49P): disconnected

      PCM connector C (49P): disconnected

      Test circuit IG1(F/P)

      Test point 1 PCM connector C (49P) No. 10 (WHT)

      Test point 2 Body ground

GETtheMANUALS.org

Fig. 51: Measuring Voltage Between Test Points 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The IG1(F/P) wire is OK. Go to step 14.

NO : Repair an open in the IG1(F/P) wire between the No. B4 (15 A) fuse and the PCM (C10).

14. Determine possible failure area (PGM-FI main relay 1 control circuit, others):
    - 1. Measure the voltage between test points 1 and 2.

Test condition IG ON (II)

PCM connector A (49P): disconnected

PCM connector C (49P): disconnected

Test circuit FI MAIN RLY CL-

Test point 1 PCM connectors A (49P) No. 7 (GRY)

Test point 2 Body ground

Fig. 52: Measuring Voltage Between Test Points 1 And 2

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : Go to step 18.

NO : Go to step 15.

15. Determine possible failure area (+B IGP line, others):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Remove PGM-FI main relay 1 (A) from the under-dash fuse/relay box.

Fig. 53: Identifying PGM-FI Main Relay 1
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 3. Measure the voltage between test points 1 and 2.

  Test condition IG LOCK (0)

  PCM connector A (49P): disconnected

  PCM connector C (49P): disconnected

  PGM-FI main relay 1: disconnected

  Test circuit +B IGP

  Test point 1 PGM-FI main relay 1 4P socket No. 4 (Under-dash fuse/relay box)

  Test point 2 Body ground

GETtheMANUALS.org

Fig. 54: Measuring Voltage Between Test Points 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : Go to step 17.

NO : Go to step 16.

16. Open wire check (+B IGP line):
    - 1. Disconnect the following connector.

      Under-dash fuse/relay box connector D (32P)

    - 2. Measure the voltage between test points 1 and 2.

      Test condition IG LOCK (0)

      PCM connector A (49P): disconnected

      PCM connector C (49P): disconnected

      PGM-FI main relay 1: disconnected

      Under-dash fuse/relay box connector D (32P): disconnected

      Test circuit +B IGP

      Test point 1 Under-dash fuse/relay box connector D (32P) No. 9 (BLU)

      Test point 2 Body ground

GETtheMANUALS.org

Fig. 55: Measuring Voltage Between Test Points 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The +B IGP wire is OK. Replace the under-hood fuse/relay box.

NO : Repair an open in the +B IGP wire between the No. A23 (15A) fuse and the under-dash fuse/relay box.

17. Open wire check (FI MAIN RLY CL- line):
    - 1. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      PCM connector A (49P): disconnected

      PCM connector C (49P): disconnected

      PGM-FI main relay 1: disconnected

      Test circuit FI MAIN RLY CLT-

      Test point 1 PCM connector A (49P) No. 7 (GRY)

      Test point 2 PGM-FI main relay 1 4P socket No. 3 (Under-dash fuse/relay box)

GETtheMANUALS.org

Fig. 56: Checking For Continuity Between Test Points 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The FI MAIN RLY CL- wire is OK. **TEST PGM-FI MAIN RELAY 1** . If the relay is OK, **update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE**, then recheck. If the symptom/indication goes away and the PCM was updated, troubleshooting is complete. If the symptom/indication goes away and the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE**.

NO : Repair an open in the FI MAIN RLY CL- wire between the PCM (A7) and PGM-FI main relay 1.

18. Determine possible failure area (+B IGP line, others):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Remove PGM-FI main relay 1 (A) from the under-dash fuse/relay box.

GETtheMANUALS.org

Is there battery voltage?

GETtheMANUALS.org

YES : The +B IGP wire is OK. Replace the under-hood fuse/relay box.

NO : Repair an open in the +B IGP wire between the No. A23 (15 A) fuse and the under-dash fuse/relay box.

20. Open wire check (FI MAIN RLY OUT line):
    - 1. Check for continuity between test points 1 and 2.

Test condition IG LOCK (0)

PCM connector A (49P): disconnected

PCM connector C (49P): disconnected

PGM-FI main relay 1: disconnected

Test circuit FI MAIN RLY OUT

Test point 1 PCM connector A (49P) No. 9 (BRN)

Test point 2 PGM-FI main relay 1 4P socket terminal No. 2 (Under-dash fuse/relay box)

Fig. 60: Checking For Continuity Between Test Points 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The FI MAIN RLY OUT wire is OK. Go to step 21.

NO : Repair an open in the FI MAIN RLY OUT wire between the PCM (A9) and PGM-FI main relay 1.

GETtheMANUALS.org

21. Relay check:
    - 1. **TEST PGM-FI MAIN RELAY 1** .

      Is PGM-FI main relay 1 OK?

      YES : PGM-FI main relay 1 is OK. Go to step 22.

      NO : Replace PGM-FI main relay 1.

22. Open wire check (PG1, LG2 lines):
    - 1. Disconnect the following connector.

      PCM connectors B (49P)

    - 2. Check for continuity between these test points and body ground individually.

      Test condition IG LOCK (0)

      PCM connector A (49P): disconnected

      PCM connector B (49P): disconnected

      PCM connector C (49P): disconnected

      PGM-FI main relay 1: disconnected

Connector	Test circuit	Terminal
PCM connector B (49P)	PG2	No. 1 (BLK)
	PG1	No. 10 (BLK)
PCM connector C (49P)	PG1	No. 2 (BLK)
	PG1	No. 15 (BRN)
	LG2	No. 20 (BRN)

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 62: Checking For Continuity Between PCM Connector C (49P) Terminals And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The PG1/PG2/LG2 wires are OK. **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE**, then recheck. If the symptom/indication goes away and the PCM was updated, troubleshooting is complete. If the symptom/indication goes away and the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE**.

NO : Repair an open in the PG1, PG2, and/or LG2 wire between the PCM (B1, B10, C2, C15, C20) and G101.

PCM UPDATE

Special Tool Required

Image	Description/Tool Number

GETtheMANUALS.org

	MVCI unit with the latest control module (CM) update software installed*

PROCEDURE

1. PCM - Update

   NOTE: Check any official Honda service website for more service information about updating the MVCI and control units.

2. Warm Up The Engine

   Start the engine. Hold the engine speed at 3, 00 rpm without load in P or N until the radiator fan comes on, then let it idle.

3. PCM - Idle Learn
   1. Let the engine idle for about 5 minutes with the throttle fully closed.

      NOTE: If the radiator fan comes on, do not include its running time in the 5 minutes.

GETtheMANUALS.org

2. After learning, turn the ignition switch to LOCK (0).

4. CKP Pattern - Clear/Learn
   1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
   2. Turn the ignition switch to ON (II).
   3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.
   4. Select CRANK PATTERN in the ADJUSTMENT MENU with the HDS.

Fig. 63: Identifying Data Link Connector (DLC)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

   5. Select CRANK PATTERN CLEAR, and clear the CKP pattern.
   6. Select CRANK PATTERN LEARNING with the HDS, and follow the screen prompts.
   7. After learning, turn the ignition switch to LOCK (0).
   8. Disconnect the HDS from the DLC.

PCV SYSTEM COMPONENT LOCATION INDEX

PCV VALVE	**INSPECTION**
	REMOVAL AND INSTALLATION

PCV VALVE INSPECTION

INSPECTION

1. PCV Valve - Inspection
    1. Check the PCV valve (A), hoses (B), and connections for leaks or restrictions.

GETtheMANUALS.org

Fig. 65: Identifying PCV Valve And Hoses
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Start the engine.
3. At idle, make sure there is a clicking sound from the PCV valve when the hose between the PCV valve and the intake manifold is lightly pinched (A) with your fingers or pliers. If there is no clicking sound, check the PCV valve washer for cracks or damage. If the washer is OK, replace the PCV valve, and recheck.

FUEL FILL DOOR

Fuel Fill Door - CR-V

FUEL FILL DOOR ADJUSTMENT

ADJUSTMENT

1. Fuel Fill Door - Adjustment
    1. Slightly loosen the hinge mounting bolts (A).
    2. Adjust the fuel fill door (B) in or out until it is flush with the body and up or down as necessary to equalize the gaps.
    3. Tighten the hinge mounting bolts.
    4. Make sure the fuel fill door opens properly and locks securely, and check that the rear of the door is flush with the body.

Fig. 1: Adjusting Fuel Fill Door
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Apply multipurpose grease to each location indicated by the arrows.
6. Apply touch-up paint to the hinge mounting bolts and around the hinges.

FUEL FILL DOOR OPENER REMOVAL AND INSTALLATION

REMOVAL

1. Front Door Sill Trim
    1. Detach the hooks (A) and the tabs (B) from the kick panel (C) and the B-pillar lower trim (D), and pull up the front door inner sill trim (E) by hand to detach the clips (F), then remove the trim.

GETtheMANUALS.org

Fig. 48: Removing Front Door Sill Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Door Opening Seal As Needed
    1. Pull out the front door opening seal (A) from the trim hooks (B) around the front door opening flange as needed.

Fig. 49: Pulling Out Front Door Opening Seal From Trim Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Kick Panel
    1. Pull out the front door opening seal (A) as needed from the kick panel hooks and the door opening flange.

GETtheMANUALS.org

2. Pull back the kick panel by hand to detach the clips (B), then remove the driver's side kick panel (C).

Fig. 50: Removing Driver's Side Kick Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Fuel Fill Door Opener
    1. Remove the bolts (A), then remove the fuel fill door opener/cable (B).
    2. Disconnect the fuel fill door opener cable (C) from the opener (D).

GETtheMANUALS.org

Fig. 51: Identifying Fuel Fill Door Opener, Cable And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Fuel Fill Door Opener
    1. Connect the fuel fill door opener cable (A) to the opener (B).
    2. Install the fuel fill door opener/cable (C), then install the bolts (D).

GETtheMANUALS.org

Fig. 52: Identifying Fuel Fill Door Opener, Cable And Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Kick Panel
    1. Install the driver's side kick panel (A). Make sure the clips (B) snap into place securely.
    2. Install the front door opening seal (C).

GETtheMANUALS.org

Fig. 53: Installing Driver's Side Kick Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Door Opening Seal As Needed
    1. Install the front door opening seal (A). Make sure the seal is installed securely into the hooks (B).

Fig. 54: Installing Front Door Opening Seal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Door Sill Trim
    1. Install the front door inner sill trim (A). Make sure the clips (B), the hooks (C), and the tabs (D) snap into place securely.

ELD REMOVAL AND INSTALLATION

REMOVAL

1. Battery Terminal - Disconnection
    1. Make sure the ignition switch is in LOCK (0).
    2. Disconnect and isolate the negative cable (A) from the battery.

    NOTE: Always disconnect the negative side first.

    3. Disconnect the positive cable (B) from the battery.

Fig. 1: Identifying Battery Positive And Negative Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. ELD
    1. Remove the ELD (A).

GETtheMANUALS.org

Fig. 2: Identifying ELD
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. ELD
    1. Install the ELD (A).

Fig. 3: Identifying ELD And Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Battery Terminal - Reconnection

GETtheMANUALS.org

NOTE: If the battery performance is abnormal, test the battery.

1. Clean the battery terminals.
2. Connect the positive cable (A) to the battery.

NOTE: Always connect the positive side first.

3. Connect the negative cable (B) to the battery.
4. Apply multipurpose grease to the terminals to prevent corrosion.

POWER RELAY TEST

SPECIAL TOOL DESCRIPTION

Image	Description/Tool Number
	Relay Puller 07AAC-000A2A1 or 07AAC-000A1A0
	Relay Socket Extension (5 Pin) 07AGK-000A2A0

GETtheMANUALS.org

	Relay Socket Extension (4 Pin) 07AGK-000A1A0

TEST

1. Power Relay - Test

   Use this chart to identify the types of the relay, then do the test listed for it.

   NOTE: Do not use pliers to remove a relay. Pliers will damage the relay.

Relay	Test
A/C compressor clutch relay A/C condenser fan relay Blower motor relay Console accessory power socket relay Driver's seat heater relay (high) (with seat heater) Electronic throttle control system (ETCS) control relay Front accessory power socket relay Fog light relay (with fog light) Front passenger's seat heater relay (high) (with seat heater) Horn relay Ignition coil relay Interior light cut relay PGM-FI main relay 1 PGM-FI main relay 2 PGM-FI subrelay Power window relay Radiator fan relay Real time AWD relay Rear window defogger relay Starter cut relay	Normally-open four-terminal type
Driver's seat heater relay (low) (with seat heater) Fan control relay Front passenger's seat heater relay (low) (with seat heater)	Five-terminal type

GETtheMANUALS.org

Fig. 12: Disconnecting Relay Puller (07AAC-000A2A1 Or 07AAC-000A1A0)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Normally-Open Four-Terminal Type

Check for continuity between the terminals:

- There should be continuity between terminals No. 1 and No. 2 when battery power is connected to terminal No. 3, and battery ground is connected to terminal No. 4.
- There should be no continuity between terminals No. 1 and No. 2 when battery power is disconnected.

RELAY CONTROL MODULE REMOVAL, INSTALLATION, AND TEST

REMOVAL

1. Relay Control Module
    1. Remove the cover (A).
    2. Remove the relay control module (B) from the under-hood fuse/relay box.
    3. Disconnect the relay control module connectors.

GETtheMANUALS.org

Fig. 22: Identifying Relay Control Module And Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TEST

1. Relay Control Module - Test

   The relay control module is part of the under-hood fuse/relay box, and contains these relays:

   - Left headlight low beam relay
   - Right headlight low beam relay
   - Taillight relay
   - Windshield wiper motor relay
   - Windshield wiper intermittent relay
   - Windshield wiper high/low relay

   1. Test each relay circuit as shown.
   2. If any of these relay circuit fails the test, replace the relay control module.

Fig. 23: Identifying Relay Control Module Connector A (16P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

Fig. 24: Identifying Relay Control Module Connector B (10P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Left Headlight Low Beam Relay

There should be battery voltage at terminal B9 when battery power is connected to terminals B8, and body ground is connected to terminal B6. There should be no voltage at terminal B9 when power is disconnected.

Fig. 25: Left Headlight Low Beam Relay - Circuit Diagram
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right Headlight Low Beam Relay

There should be battery voltage at terminal B2 when battery power is connected to terminals B7, and body ground is connected to terminal B6. There should be no voltage at terminal B2 when power is disconnected.

Fig. 26: Right Headlight Low Beam Relay - Circuit Diagram
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Taillight Relay

GETtheMANUALS.org

There should be battery voltage at terminal A2 when battery power is connected to terminal A8, and body ground is connected to terminal A1. There should be no voltage at terminal A2 when terminal A1 is disconnected.

Fig. 27: Taillight Relay - Circuit Diagram
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Windshield Wiper Motor Relay

There should be continuity between terminals A16 and A3, and terminals A16 and A6 when battery power is connected to terminal A9, and body ground is connected to terminal B1. There should be no continuity between terminals A16 and A3, and terminals A16 and A6 when power is disconnected.

Fig. 28: Windshield Wiper Motor Relay - Circuit Diagram
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Windshield Wiper Intermittent Relay

There should be battery voltage at terminal A12 when battery power is connected to terminals A16 and A9, and body ground is connected to terminals B1 and A6. There should be no voltage at terminal A12 when terminal A6 is disconnected.

GETtheMANUALS.org

Fig. 29: Windshield Wiper Intermittent Relay - Circuit Diagram
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Windshield Wiper High/Low Relay

There should be battery voltage at terminal A13 when battery power is connected to terminals A16 and A9, and body ground is connected to terminals B1, A3, and A6. There should be no voltage at terminal A13 when terminal A3 is disconnected.

Fig. 30: Windshield Wiper High/Low Relay - Circuit Diagram
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Relay Control Module
    1. Connect the relay control module connectors.
    2. Install the relay control module (A) to the under-hood fuse/relay box.
    3. Install the cover (B).

GETtheMANUALS.org

Fig. 31: Identifying Relay Control Module And Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

UNDER-DASH FUSE/RELAY BOX REMOVAL AND INSTALLATION

REMOVAL

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

1. Battery Terminal (SRS) - Disconnection
    1. Make sure the ignition switch is in LOCK (0).
    2. Disconnect and isolate the negative cable (A) from the battery.

    NOTE: Always disconnect the negative side first.

    3. Disconnect the positive cable (B) from the battery.
    4. Wait at least 3 minutes before starting work.

GETtheMANUALS.org

Fig. 32: Identifying Battery Positive And Negative Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Driver's Dashboard Undercover
    1. Turn the lock knob (A) 90 °, then gently pull down the front edge of the driver's dashboard undercover (B) to detach the clip (C).
    2. Pull away the undercover to release the pin (D) from the holder (E), then remove the driver's dashboard undercover.

Fig. 33: Identifying Driver's Dashboard Undercover, Lock Knob, Holder, Pin And Clip

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Driver's Dashboard Panel Assembly
    1. Carefully pry out the driver's dashboard panel assembly (A) with the appropriate trim tool to detach the clips (B).
    2. Disconnect the connector (C), then remove the driver's dashboard panel assembly.

Fig. 34: Identifying Driver's Dashboard Panel Assembly, Connector And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Driver's Dashboard Lower Cover
    1. Carefully pry out the driver's dashboard lower cover (A) with the appropriate trim tool to detach the clips (B).
    2. Disconnect the connector (C), then remove the driver's dashboard lower cover.

GETtheMANUALS.org

Fig. 35: Identifying Driver's Dashboard Lower Cover, Connector And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Under-Dash Fuse/Relay Box
    1. Disconnect the connectors from the fuse side of the under-dash fuse/relay box (A).

GETtheMANUALS.org

Fig. 36: Identifying Under-Dash Fuse/Relay Box
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Detach the under-dash fuse/relay box.
3. Disconnect the connectors from the back side of the under-dash fuse/relay box, then remove the under-dash fuse/relay box.
4. Carefully remove the relays using a relay puller.

NOTE: **Do not use pliers. Pliers will damage the relays, which could cause the engine to stall or not start or cause other functions to fail.**

6. Under-Dash Fuse/Relay Box - Canada models
   1. Disconnect the connectors from the fuse side of the under-dash fuse/relay box (A).

GETtheMANUALS.org

Fig. 37: Identifying Under-Dash Fuse/Relay Box And Covers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the covers (B) from the under-dash fuse/relay box.
3. Detach the under-dash fuse/relay box.
4. Disconnect the connectors from the back side of the under-dash fuse/relay box, then remove the under-dash fuse/relay box.
5. Carefully remove the relays using a relay puller.

NOTE: **Do not use pliers. Pliers will damage the relays, which could cause the engine to stall or not start or cause other functions to fail.**

INSTALLATION

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

GETtheMANUALS.org

1. Under-Dash Fuse/Relay Box - Canada models

NOTE: **The imoes unit is built into the MICU, which is part of the under-dash fuse/relay box. Because of this construction, the imoes must be registered, or the vehicle will not start.**

1. Install the relays in the under-dash fuse/relay box (A).

Fig. 38: Identifying Under-Dash Fuse/Relay Box Covers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Connect the connectors to the back side of the under-dash fuse/relay box.
3. Install the under-dash fuse/relay box.
4. Install the covers (B) to the under-dash fuse/relay box.
5. Connect the connectors to the fuse side of the under-dash fuse/relay box.

GETtheMANUALS.org

2. Under-Dash Fuse/Relay Box

NOTE: **The imoes unit is built into the MICU, which is part of the under-dash fuse/relay box. Because of this construction, the imoes must be registered, or the vehicle will not start.**

1. Install the relays in the under-dash fuse/relay box (A).

Fig. 39: Identifying Under-Dash Fuse/Relay Box
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Connect the connectors to the back side of the under-dash fuse/relay box.
3. Install the under-dash fuse/relay box.
4. Connect the connectors to the fuse side of the under-dash fuse/relay box.

3. Driver's Dashboard Lower Cover
   1. Connect the connector (A), then install the driver's dashboard lower cover (B). Make sure the clips (C) snap into place securely.

GETtheMANUALS.org

Fig. 40: Identifying Driver's Dashboard Lower Cover, Connector And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Driver's Dashboard Panel Assembly
    1. Connect the connector (A), then install the driver's dashboard panel assembly (B). Make sure the clips (C) snap into place securely.

Fig. 41: Identifying Driver's Dashboard Panel Assembly, Connector And Clips

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Driver's Dashboard Undercover
    1. Install the driver's dashboard undercover (A). Make sure the clip (B) snap into place securely, and the pin (C) into the holder (D) securely.
    2. Turn the lock knob (E) 90 °.

Fig. 42: Identifying Driver's Dashboard Undercover, Lock Knob, Holder, Pin And Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Battery Terminal (SRS) - Reconnection

NOTE: If the battery performance is abnormal, test the battery.

1. Clean the battery terminals.
2. Connect the positive cable (A) to the battery.

NOTE: Always connect the positive side first.

3. Connect the negative cable (B) to the battery.
4. Apply multipurpose grease to the terminals to prevent corrosion.

GETtheMANUALS.org

Fig. 43: Identifying Battery Positive, Negative Terminals, Mounting Bolts And Nuts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 44: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Under-Dash Fuse/Relay Box After Installation Check

GETtheMANUALS.org

1. Select IMMOBI from the SYSTEM SELECTION MENU, then select IMMOBILIZER SET UP.
2. Select REPLACE MPCS/MICU/IMOES, then select the suitable menu from the HDS indications.
3. After registration, confirm that the vehicle will start.
4. Confirm that all system work properly.

UNDER-HOOD FUSE/RELAY BOX REMOVAL AND INSTALLATION

REMOVAL

1. Battery Terminal (SRS) - Disconnection
    1. Make sure the ignition switch is in LOCK (0).
    2. Disconnect and isolate the negative cable (A) from the battery.

    NOTE: Always disconnect the negative side first.

    3. Disconnect the positive cable (B) from the battery.
    4. Wait at least 3 minutes before starting work.

Fig. 45: Identifying Battery Positive And Negative Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Relay Control Module
    1. Remove the cover (A).
    2. Remove the relay control module (B) from the under-hood fuse/relay box.
    3. Disconnect the relay control module connectors.

GETtheMANUALS.org

Fig. 46: Identifying Relay Control Module And Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Under-Hood Fuse/Relay Box Assembly

NOTE: The under-hood fuse/relay box is a part of the engine compartment wire harness, and it cannot be replaced by itself.

1. Remove the alternator and battery cable (A) from the under-hood fuse/relay box (B).
2. Release the tabs (C), then detach the under-hood fuse/relay box.
3. Remove the bottom cover (D) and connector from the under-hood fuse/relay box.
4. Carefully remove the relays using a relay puller.

NOTE: Do not use pliers. Pliers will damage the relays, which could cause the engine to stall or not start or cause other functions to fail.

GETtheMANUALS.org

Fig. 47: Identifying Alternator And Battery Cable, Under-Hood Fuse/Relay Box, Bottom Cover And Tabs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Under-Hood Fuse/Relay Box Assembly

NOTE: **The under-hood fuse/relay box is a part of the engine compartment wire harness, and it cannot be replaced by itself.**

1. Install the relays, connector, and bottom cover (A) to the under-hood fuse/relay box (B).
2. Install the under-hood fuse/relay box.
3. Install the alternator and battery cable (C) to the under-hood fuse/relay box.

GETtheMANUALS.org

Fig. 48: Identifying Alternator And Battery Cable, Under-Hood Fuse/Relay Box, Bottom Cover And Tabs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Relay Control Module
    1. Connect the relay control module connectors.
    2. Install the relay control module (A) to the under-hood fuse/relay box.
    3. Install the cover (B).

GETtheMANUALS.org

Fig. 49: Identifying Relay Control Module And Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Battery Terminal (SRS) - Reconnection

NOTE: If the battery performance is abnormal, test the battery.

1. Clean the battery terminals.
2. Connect the positive cable (A) to the battery.

NOTE: Always connect the positive side first.

3. Connect the negative cable (B) to the battery.
4. Apply multipurpose grease to the terminals to prevent corrosion.

GETtheMANUALS.org

GAUGES SELF-DIAGNOSTIC FUNCTION

The gauge control module has a self-diagnostic function which consists of the following checks:

- The indicator drive circuit check.
- The ambient meter color variation check.
- The switch input check.
- The beeper drive circuit check.
- The LCD check.
- The gauge drive circuit check (engine coolant temperature gauge, fuel gauge, speedometer, and tachometer).
- The communication line check (of the body controller area network (B-CAN) communication line and the fast controller area network (F-CAN) communication line between the gauges).

NOTE: Indicators are also controlled via the communication lines.

ENTERING THE SELF-DIAGNOSTIC FUNCTION WITH THE HDS

Using the HDS, select BODY ELECTRICAL, GAUGES, then FUNCTION TESTS and do the self-diagnostic function.

ENTERING THE SELF-DIAGNOSTIC FUNCTION (MANUAL METHOD)

Before doing the self-diagnostic function, make sure the No. A29 (10 A) fuse in the under-hood fuse/relay box, and No. B5 (10 A) fuse in the under-dash fuse/relay box are OK.

1. Push and hold the SEL/RESET button.
2. Turn the combination light switch to the Parking position ( ).
3. Turn the ignition switch to ON (II).
4. Within 5 sec., turn the combination light switch OFF, then to the Parking position ( ) and OFF again.
5. Within 5 sec., release the SEL/RESET button, and then push and release the button three times repeatedly.

NOTE:

- **While in the self-diagnostic mode, the dashlights brightness controller operates normally.**
- **While in the self-diagnostic mode, the SEL/RESET switch is used to start the Beeper Drive Circuit Test and the Gauge Drive Circuit Check.**
- **If the vehicle speed exceeds 1.2 mph (2 km/h), or the ignition switch**

GETtheMANUALS.org

is turned to LOCK (0), the self-diagnostic mode ends.

Fig. 1: Ignition Switch Blinking Pattern
Courtesy of AMERICAN HONDA MOTOR CO., INC.

THE INDICATOR DRIVE CIRCUIT CHECK

When entering the self-diagnostic mode, the following indicators (if equipped) blink:

A/T gear position indicator, ABS indicator, brake system indicator, charging system indicator, cruise control indicator, cruise main indicator, door indicator, ECO indicator, AWD system indicator, EPS indicator, fog light indicator, high beam indicator, immobilizer indicator, lights-on indicator, low fuel indicator, low oil pressure indicator, low tire pressure indicator, maintenance required indicator, malfunction indicator lamp (MIL), seat belt reminder indicator, security indicator, side airbag cutoff indicator, SRS indicator, tailgate indicator, TPMS indicator, VSA indicator, VSA OFF indicator, and washer fluid level indicator (Canada models).

THE AMBIENT METER COLOR VARIATION CHECK

When entering the self-diagnostic mode, the color of the ambient meter varies to white, white/green, and green in that order.

SWITCH INPUT CHECK

At the initial stage of the self-diagnostic function, the beeper sounds intermittently. The beeper sounds continuously when any of the following switch inputs are switched from OFF to ON: Cruise control main switch, ECON switch, parking brake switch, SEL/RESET switch, SET, RESUME, CANCEL switches, PREVIOUS switch, NEXT switch, and VSA OFF switch.

THE BEEPER DRIVE CIRCUIT CHECK

When entering the self-diagnostic mode, the beeper sounds five times.

THE LCD SEGMENT CHECK

When entering the self-diagnostic mode, all the segments blink five times.

THE GAUGE DRIVE CIRCUIT CHECK

GETtheMANUALS.org

When entering the self-diagnostic mode, the speedometer, the tachometer, the fuel gauge, and the engine coolant temperature gauge needles sweep from the minimum position to the maximum position, then return to the minimum position.

NOTE: **After the beeper stops sounding and the gauge needles return to the minimum position, pushing the SEL/RESET button starts the Beeper Drive Circuit Check (one beep) and the Gauge Drive Circuit Check again. The check cannot be started again until the gauge needles return to the minimum position.**

Fig. 2: SEL/RESET Switch Blinking Pattern
Courtesy of AMERICAN HONDA MOTOR CO., INC.

THE COMMUNICATION LINE CHECK

While in the self-diagnostic mode, the Communication Line Check starts after the LCD Segments Check.

If all segments come on, the communication line is OK. If faulty, the word "Error" will be indicated on the LCD display followed by a number or numbers.

ERROR CODE LIST

Error code	Type of communication line(s) error
Error 1	F-CAN communication
Error 2	B-CAN communication
Error 12	F-CAN and B-CAN communication

Indication Example:

GETtheMANUALS.org

Fig. 3: Screen Display - Indication Example
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- Error 1: There is a malfunction in the communication line between the gauge control module and F-CAN. Check for DTCs in the PCM, and troubleshoot the indicated DTCs.
- Error 2: There is a malfunction in the communication line between the gauge control module and B-CAN. Check for DTCs in the body electrical system and troubleshoot the indicated DTCs.

ENDING THE SELF-DIAGNOSTIC FUNCTION

Turn the ignition switch to LOCK (0).

GETtheMANUALS.org

NOTE: **If the vehicle speed exceeds 1.2 mph (2 km/h), the self-diagnostic function ends.**

CENTER DISPLAY UNIT REMOVAL AND INSTALLATION

REMOVAL

1. Inner Vent - Both Sides
    1. Carefully pry out the inner vents (A) with the appropriate trim tool to detach the clips (B), then remove the inner vents.

Fig. 4: Identifying Inner Vents And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Audio Unit Assembly

NOTE:

- **Eject the discs before removing the audio unit to prevent damaging the CD player's load mechanism.**
- **If you are replacing the audio unit, write down the audio presets (if possible), then enter them into the new audio unit.**
- **Lay a shop towel under the parts when working on them to protect the face panel from scratches or other damage.**
- **Do not work in a dusty or dirty place.**
- **Discharge static electricity from your body before and during the work.**
- **Do not touch the circuit board(s) with your bare hands.**

GETtheMANUALS.org

- **Do not work with dirty hands.**
- **Do not touch the terminal connector of the flat plate cable with your bare hands (If you have touched it, wipe it off thoroughly.).**

1. Remove the bolts.
2. Disconnect the connectors, then pull out the audio unit (A).

Fig. 5: Identifying Audio Unit And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Dashboard Center Display Visor Assembly
    1. Remove the dashboard center display visor (A).

Fig. 6: Identifying Dashboard Center Display Visor With Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Center Display Unit Assembly
    1. Remove the center display unit assembly (A).
    2. Disconnect the connectors.

GETtheMANUALS.org

GETtheMANUALS.org

FUEL GAUGE SENDING UNIT TEST

SPECIAL TOOL REQUIRED DESCRIPTION

Image	Description/Tool Number
	Fuel Nut Wrench 07AAA-T0AA100

TEST

1. Fuel Gauge Sending Unit - DTC Check
    1. Check the No. B5 IG1 METER (10 A) fuse in the under-dash fuse/relay box before testing.
    2. Check for body electrical system DTCs.
        - If no DTCs are found, go to the next procedure.
        - If DTC B1175 or B1176 is indicated, go to the indicated DTC's troubleshooting.

REMOVAL

1. Fuel Gauge Sending Unit Access Panel
    1. Remove the access panel (A) from the floor.
    2. Disconnect the connector (B).

GETtheMANUALS.org

Fig. 16: Identifying Access Panel And Connector With Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TEST

1. Fuel Gauge Sending Unit Harness
    1. Measure the voltage between fuel tank unit 4P connector terminals No. 2 and No. 4 with the ignition switch turned to ON (II). There should be battery voltage.
        - If the voltage is OK, turn the ignition switch to LOCK (0), and go to the next procedure.
        - If the voltage is not as specified, turn the ignition switch to LOCK (0), and check for:
            - a short in the YEL wire to ground.
            - an open in the YEL or PUR wire.
    2. Connect the connector to the fuel tank unit.

Fig. 17: Measuring Voltage Between Fuel Tank Unit 4P Connector Terminals No. 2 And No. 4 With Ignition Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

REMOVAL

1. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 18: Identifying Data Link Connector Located Under Driver's Side Of Dashboard
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Fuel Pump Off
    1. From the INSPECTION MENU of the HDS, select Fuel Pump OFF, then start the engine, and let it idle until it stalls.

NOTE:

- **Do not allow the engine to idle above 1, 000 rpm or the PCM will continue to operate the fuel pump.**
- **Pending or Confirmed DTC may be set during this procedure. Check for DTCs, and clear them as needed.**

    2. Turn the ignition switch to LOCK (0).
3. Battery Terminal - Disconnection
    1. Make sure the ignition switch is in LOCK (0).
    2. Disconnect and isolate the negative cable (A) from the battery.

NOTE: **Always disconnect the negative side first.**

GETtheMANUALS.org

3. Disconnect the positive cable (B) from the battery.

Fig. 19: Identifying Negative Cable And Positive Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Fuel Fill Cap
    1. Remove the fuel fill cap to relieve the pressure in the fuel tank.
5. Fuel Pressure - Relieving (Fuel Tank Unit)

NOTE: BEFORE YOU WORK ON THE FUEL LINES AND FITTINGS, READ THE FUEL LINE/QUICK-CONNECT FITTING PRECAUTIONS .

1. Check the fuel quick-connect fitting for dirt, and clean it if needed.
2. Place a rag or shop towel (A) over the quick-connect fitting.

GETtheMANUALS.org

Fig. 20: Placing Rag Or Shop Towel Over Quick-Connect Fitting
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Disconnect the quick-connect fitting: Hold the connector (A) with one hand, and squeeze the retainer tabs (B) with the other hand to release them from the locking tabs (C). Pull the connector off.

NOTE:

- **Be careful not to damage the line (D) or other parts.**
- **Do not use tools.**
- **If the connector does not move, keep the retainer tabs pressed down, and alternately pull and push the connector until it comes off easily.**
- **Do not remove the retainer from the line; once removed, the retainer must be replaced with a new one.**

Fig. 21: Disconnecting Quick-Connect Fitting
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Fuel Tank Unit
    1. Using the special tool, loosen the locknut (A).

GETtheMANUALS.org

Fig. 22: Loosening Locknut Using Special Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the locknut (A).
3. Remove the fuel tank unit (B).

GETtheMANUALS.org

Fig. 23: Identifying Locknut And Fuel Tank Unit
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TEST

1. Fuel Gauge Sending Unit - Test
    1. Measure the resistance between fuel tank unit connector terminals No. 2 and No. 4 with the float at E (EMPTY), LOW (LOW FUEL INDICATOR), 1/2 (HALF FULL), and F (FULL) positions.

       If you do not get the following readings, replace the fuel gauge sending unit.

Float Position	F 8.677 in (220.4 mm)	1/2 6.232 in (158.3 mm)	LOW 2.614 in (66.4 mm)	E 1.657 in (42.1 mm)
Resistance	19 to 21	202 to 212	548.7 to 662.1	772 to 788

GETtheMANUALS.org

(ohms)				

Fig. 24: Measuring Resistance Between Fuel Tank Unit Connector Terminals No. 2 And No. 4
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Reconnect the fuel tank unit connector.
3. Remove the No. A29 BACK UP (10 A) fuse from the under-hood fuse/relay box for at least 10 seconds, then reinstall it.
4. Temporarily connect the battery positive and negative cables to the battery.
5. Turn the ignition switch to ON (II).
6. Check that the pointer of the fuel gauge indicates F with the float at F.
   - If the pointer of the fuel gauge does not indicate F, replace the gauge control module.
   - If the gauge is OK, the test is complete.

NOTE:

- **The pointer of the fuel gauge returns to the bottom of the gauge dial when the ignition switch is turned to ACC (I) or LOCK (0), regardless of the fuel level.**
- **Remove the No. A29 BACK UP (10 A) fuse from the under-hood fuse/relay box for at least 10 seconds after completing troubleshooting, otherwise it may take up to 20 minutes for the fuel gauge to indicate the correct fuel level.**

7. Turn the ignition switch to LOCK (0), then disconnect the battery negative and positive cables from the battery.

INSTALLATION

GETtheMANUALS.org

1. Fuel Tank Unit
    1. Insert the fuel tank unit (A) partially into the fuel tank with a new O-ring (B).

Fig. 25: Inserting Fuel Tank Unit Partially Into Fuel Tank With O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Align the marks (A) on the fuel tank and fuel tank unit, then insert the fuel tank unit into the fuel tank until.

NOTE: **To avoid a fuel leak, check the base gasket, visually or by hand, to make sure it is not pinched.**

GETtheMANUALS.org

Fig. 26: Aligning Marks On Fuel Tank And Fuel Tank Unit
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Tighten a new locknut (A) by hand holding the fuel tank unit vertically.

NOTE: **Before tightening, align the mark (B) on the locknut to the start of the thread (C).**

GETtheMANUALS.org

Fig. 27: Tightening Locknut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Using the special tool, tighten the locknut to the specified torque.

NOTE:

- **After tightening, make sure the marks are still aligned.**
- **After installation, check the base gasket, visually or by hand, to make sure it is not pinched.**

GETtheMANUALS.org

Fig. 28: Tightening Locknut To Specified Torque Using Special Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Fuel Line/Quick-Connect Fitting - Connection (Fuel Tank Unit)

NOTE: BEFORE YOU WORK ON THE FUEL LINES AND FITTINGS, READ THE FUEL LINE/QUICK-CONNECT FITTING PRECAUTIONS .

1. Connect the quick-connect fitting (A) to the fuel tank unit (B).

Fig. 29: Identifying Quick-Connect Fitting And Fuel Tank Unit
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Fuel Gauge Sending Unit Access Panel

GETtheMANUALS.org

1. Connect the connector (A).
2. Install the access panel (B) to the floor.

Fig. 30: Identifying Access Panel And Connector With Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Fuel Fill Cap
    1. Install the fuel fill cap.
5. Battery Terminal - Reconnection

NOTE: If the battery performance is abnormal, test the battery.

1. Clean the battery terminals.
2. Connect the positive cable (A) to the battery.

NOTE: Always connect the positive side first.

3. Connect the negative cable (B) to the battery.
4. Apply multipurpose grease to the terminals to prevent corrosion.

GETtheMANUALS.org

Fig. 31: Identifying Multipurpose Grease Applying Area On Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Fuel Line Leak Check
    1. Turn the ignition switch to ON (II) (but do not operate the starter motor). The fuel pump runs for about 2 seconds, and fuel pressure rises. Repeat this two or three times, then make sure there are no fuel leaks.

GAUGE CONTROL MODULE REMOVAL AND INSTALLATION

REMOVAL

1. Gauge Control Module Data - Rewriting
    1. -
2. Dashboard Meter Visor
    1. Carefully pry out the dashboard meter visor blind cover (A) with the appropriate trim tool to detach the clips (B) and the hook (C), then tuck up the dashboard meter visor blind cover.

GETtheMANUALS.org

Fig. 32: Identifying Dashboard Meter Visor Blind Cover, Clips And Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Pull out the dashboard meter visor assembly (A) with the appropriate trim tool to detach the clips (B, C) and the tabs (D), then remove the dashboard meter visor assembly.

FUEL GAUGE INDICATION DOES NOT RISE

Fig. 44: Gauges Symptom Troubleshooting Flow Chart - Fuel Gauge Indication Does Not Rise
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **When refueling, the gauge control module shifts to the "refueling mode," moving the fuel gauge indicator only after it detects that 5 liters (approximately 1.25 U.S. gallon) of fuel have been added.**
- **The fuel gauge indication may not rise when refueling a small quantity of fuel and the control mode does not shift to refueling mode.**

SHIFT TO THE REFUELING MODE

GETtheMANUALS.org

Fig. 45: Shift To Refueling Mode Graph
Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. DTC check:
   - 1. Turn the ignition switch to ON (II).
   - 2. Check the low fuel indicator.

   Does the low fuel indicator flash?

   YES : Check for DTCs. If any DTCs are indicated, do the indicated DTC's troubleshooting. If no DTCs are indicated, **replace the gauge control module** See **GAUGE CONTROL MODULE REMOVAL AND INSTALLATION** or REWRITING THE ODO DATA AND TRANSFERRING THE MAINTENANCE MINDER™ DATA TO A NEW GAUGE CONTROL MODULE.

   NO : Go to step 2.

2. Fuel gauge operation check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. **DO THE GAUGE SELF-DIAGNOSTIC FUNCTION**.

   Is the fuel gauge OK?

   YES : Go to step 3.

GETtheMANUALS.org

NO : Replace the gauge control module.

3. Fuel tank visual check:
   - 1. Raise the vehicle on a lift.
   - 2. Check the fuel tank for damage.

Is the fuel tank OK?

YES : Go to step 4.

NO : REPLACE THE FUEL TANK .

4. Fuel gauge sending unit check:
   - 1. **TEST THE FUEL GAUGE SENDING UNIT**.

Is the fuel gauge sending unit OK?

YES : Confirm the control method of the fuel gauge.

NO : Replace the fuel gauge sending unit.

OUTSIDE AIR TEMPERATURE INDICATOR DOES NOT CHANGE

Fig. 46: Gauges Symptom Troubleshooting Flow Chart - Outside Air Temperature Indicator Does Not Change
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Outside air temperature is indicated based on the measurement value of the outside air temperature sensor located behind the center of the front bumper.**

GETtheMANUALS.org

Because of the location of the sensor, it may be affected by heat reflection from the road, engine and radiator heat, or hot exhaust from surrounding traffic. To display the outside air temperature, the gauge control module has an indication mode based on engine coolant temperature and vehicle speed. Some modes do not raise the temperature indication, so the outside air temperature indication may not change when the mode continues.

OUTSIDE AIR TEMPERATURE INDICATION MODE

Indication Mode	Indication Temperature Increase	Indication Temperature Decrease	Notes
Initial Indication	---	---	• If the current outside air temperature is higher than the indicated outside air temperature the last time the ignition switch was turned off, and the engine coolant temperature is higher than 140 °F (60 °C): The last outside air temperature that was indicated before the ignition switch was turned off is displayed. • If the current outside air temperature is higher than the indicated outside air temperature the last time the ignition switch was turned off, and the engine coolant temperature is less than 140 °F (60 °C): The current temperature measured by the outside air temperature sensor is indicated.
Garage Mode	Increases 1 °F (1 °C) every 2 seconds to the current outside air temperature.	Decreases 1 °F (1 °C) every 2 seconds to the current outside air temperature.	• If the engine coolant temperature is less than 140 °F (60 °C) when the ignition switch is turned ON (II), the mode shifts to the garage mode. • The garage mode continues until the engine coolant temperature reaches 140 °F (60 °C).
Vehicle Leaving Mode	---	---	If the engine coolant temperature rises to more than 140 °F (60 °C), and then drops to less than 140 °F (60 °C) when the ignition switch is ON (II), continue handling it as if at 140 °F (60 ° C) without shifting to the garage mode.
		If the outside air temperature is less than	If the engine coolant temperature is

GETtheMANUALS.org

Traffic Jam Mode	---	the indicated temperature, the temperature decreases by 1 °F (1 °C) every 2 seconds.	more than 140 °F (60 °C) and vehicle speed is 0 mph (0 km/h), the mode shifts to the traffic jam mode.
Predictive Mode	If the temperature measured by the outside air temperature sensor is greater than the predicted value, the outside temperature indicator increases by 1 °F (1 °C) per 1 minute.	If the temperature measured by the outside air temperature sensor is smaller than the predicted value, the outside temperature indicator decreases by 1 °F (1 °C) per 1 minute.	Calculates the true outside air temperature from the sensor value at the time the vehicle starts running and the amount of change of the sensor value.

1. A/C system DTC check:
   - 1. Check for DTCs with the HDS.

DTC Description	DTC
B1227 An open in the outside air temperature sensor circuit	
B1228 A short in the outside air temperature sensor circuit	

Is DTC B1227 or B1228 indicated?

YES : Go to the indicated DTC troubleshooting.

NO : Go to step 2.

2. Outside air temperature sensor check:
   - 1. **TEST THE OUTSIDE AIR TEMPERATURE SENSOR** .

Is the outside air temperature sensor OK?

YES : Confirm the control method of the outside air temperature indicator.

NO : **REPLACE THE OUTSIDE AIR TEMPERATURE SENSOR** .

THE FUEL GAUGE INDICATION FLUCTUATES

GETtheMANUALS.org

Gauges Symptom Troubleshooting - The fuel gauge indication fluctuates

Fig. 47: Gauges Symptom Troubleshooting Flow Chart - Fuel Gauge Indication Fluctuates
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **The fuel sending unit float level changes frequently due to acceleration, deceleration, cornering, and slopes. As a result, the fuel gauge reading that is displayed is based on inputs it receives from the fuel sending unit, as well as inputs on fuel injector duration.**
- **The following conditions may cause fuel gauge fluctuations:**
  - **Driving uphill and downhill for long periods of time.**
  - **Stopping in a slanted position, such as on a grade.**

1. DTC check:
   - 1. Turn the ignition switch to ON (II).
   - 2. Check the low fuel indicator.

   Does the low fuel indicator flash?

   YES : Check for DTCs. If any DTCs are indicated, do the indicated DTC's troubleshooting. If no DTCs are indicated, replace the gauge control module.

   NO : Go to step 2.

2. Fuel gauge sending unit installation check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check for poor connections and loose terminals.

GETtheMANUALS.org

Are the connections OK?

YES : Go to step 3.

NO : Reconnect the connectors.

3. Fuel gauge sending unit check:
    - 1. **TEST THE FUEL GAUGE SENDING UNIT**.

Is the fuel gauge sending unit OK?

YES : Confirm the control method of the fuel gauge.

NO : Replace the fuel gauge sending unit.

HAZARD WARNING SWITCH REMOVAL, INSTALLATION, AND TEST

REMOVAL

1. Inner Vent - Both Sides
    1. Carefully pry out the inner vents (A) with the appropriate trim tool to detach the clips (B), then remove the inner vents.

Fig. 48: Identifying Inner Vents And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Audio Unit Assembly (Without Navigation)

GETtheMANUALS.org

NOTE:

- **Eject the CD before disconnecting the audio unit to prevent damaging the CD player's load mechanism.**
- **If you are replacing the audio unit, write down the audio presets (if possible), and enter them into the new audio unit.**
- **Lay a shop towel under the parts when working on them to protect the face panel from scratches or other damage.**
- **Do not work in a dusty or dirty place.**
- **Discharge static electricity from your body before and during the work.**
- **Do not touch the circuit board(s) with your bare hands.**
- **Do not work with dirty hands.**
- **Do not touch the terminal connector of the flat plate cable with your bare hands (If you have touched it, wipe it off thoroughly.).**

1. Remove the bolts.
2. Disconnect the connectors, then pull out the audio unit (A).

Fig. 49: Identifying Audio Unit And Bolts

KX

Fig. 51: Identifying Audio-Navigation Unit With Screws (KX)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Eject the discs before removing the audio-navigation unit to prevent damaging the CD/DVD player's load mechanism.**
- **If you are replacing the audio-navigation unit, write down the audio presets (if possible), then enter them into the new audio-navigation**

GETtheMANUALS.org

unit.

- **If the audio-navigation unit is replaced or disconnected, Map Matching must be done.**
- **Lay a shop towel under the parts when working on them to protect the face panel from scratches or other damage.**
- **Do not work in a dusty or dirty place.**
- **Discharge static electricity from your body before and during the work.**
- **Do not touch the circuit board(s) with your bare hands.**
- **Do not work with dirty hands.**
- **Do not touch the terminal connector of the flat plate cable with your bare hands (If you have touched it, wipe it off thoroughly.).**

1. Remove the bolts.
2. Disconnect the connectors, then pull out the audio-navigation unit (A).

4. Hazard Warning Switch
   1. Remove the hazard warning switch (A).

Fig. 52: Identifying Hazard Warning Switch With Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Hazard Warning Switch Bulb
   1. Remove the hazard warning switch bulb (A).

GETtheMANUALS.org

LOW FUEL INDICATOR TEST

TEST

1. Low Fuel Indicator - Test
    1. Do the gauge self-diagnostic function.
        - If the low fuel indicator flashes, go to step 2.
        - If the low fuel indicator does not flash, replace the gauge control module.
    2. Check for body electrical system DTCs.
        - If any DTCs are indicated, do the indicated DTCs troubleshooting.
        - If no DTCs are indicated, go to step 3.
    3. Do the fuel gauge sending unit test.

LOW OIL PRESSURE INDICATOR CIRCUIT TROUBLESHOOTING (OPEN)

GETtheMANUALS.org

Low Oil Pressure Indicator Circuit Troubleshooting - Open

Fig. 62: Low Oil Pressure Indicator Circuit Troubleshooting Flow Chart (Open)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. Input signal test:
   - 1. **Connect the HDS to the DLC** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 2. Turn the ignition switch to ON (II).
   - 3. Make sure the HDS communicates with the vehicle and the PCM. If it does not communicate, **TROUBLESHOOT THE DLC CIRCUIT** .
   - 4. **Check for DTCs** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** . If a DTC is present, diagnose, and repair the cause before continuing with this test.
   - 5. Turn the ignition switch to ON (II), and check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
OIL PRESSURE SWITCH	ON			

Do the current condition(s) match the threshold?

YES : **Replace the gauge control module** See **GAUGE CONTROL MODULE REMOVAL AND INSTALLATION** or REWRITING THE ODO DATA AND TRANSFERRING THE MAINTENANCE MINDER™ DATA TO A NEW GAUGE CONTROL MODULE.

NO : The input signal does not match the conditions. Go to step 2.

GETtheMANUALS.org

2. Oil pressure switch test:
    - 1. Turn the ignition switch to LOCK (0).
    - 2. CHECK THE OIL PRESSURE SWITCH .

    Is the oil pressure switch OK?

    YES : The oil pressure switch is OK. Go to step 3.

    NO : REPLACE THE OIL PRESSURE SWITCH .

3. Open wire check (OIL PRESS SW line):
    - 1. Jump the SCS line with the HDS.

      NOTE: This step must be done to protect the PCM from damage.

    - 2. Disconnect the following connectors.

      PCM connector B (49P)

      Oil pressure switch 1P connector

    - 3. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      PCM connector B (49P): disconnected

      Oil pressure switch 1P connector: disconnected

      Test circuit OIL PRESS SW

      Test point 1 PCM connector B (49P) No. 7 (PNK)

      Test point 2 Oil pressure switch 1P connector No. 1 (PNK)

GETtheMANUALS.org

Fig. 63: Checking For Continuity Between PCM Connector B (49P) And Oil Pressure Switch 1P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : **Update the PCM if it does not have the latest software** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then recheck. If the PCM was substituted, and the symptom/indication goes away, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** .

NO : Repair an open in the OIL PRESS SW wire between the oil pressure switch and the PCM.

LOW OIL PRESSURE INDICATOR CIRCUIT TROUBLESHOOTING (SHORT)

GETtheMANUALS.org

Low Oil Pressure Indicator Circuit Troubleshooting - Short

Fig. 64: Low Oil Pressure Indicator Circuit Troubleshooting Flow Chart (Short)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. Input signal test:
   - 1. **Connect the HDS to the DLC** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 2. Turn the ignition switch to ON (II).
   - 3. Make sure the HDS communicates with the vehicle and the PCM. If it does not communicate, **TROUBLESHOOT THE DLC CIRCUIT** .
   - 4. **Check for DTCs** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** . If a DTC is present, diagnose, and repair the cause before continuing with this test.
   - 5. Start the engine, and check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
OIL PRESSURE SWITCH	OFF			

Do the current condition(s) match the threshold?

YES : **Replace the gauge control module** See **GAUGE CONTROL MODULE REMOVAL AND INSTALLATION** or REWRITING THE ODO DATA AND TRANSFERRING THE MAINTENANCE MINDER™ DATA TO A NEW GAUGE CONTROL MODULE.

GETtheMANUALS.org

NO : The input signal does not match the conditions. Go to step 2.

2. Oil pressure switch test:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. CHECK THE OIL PRESSURE SWITCH .

Is the oil pressure switch OK?

YES : The oil pressure switch is OK. Go to step 3.

NO : DO THE OIL PRESSURE TEST . If the oil pressure is OK, REPLACE THE OIL PRESSURE SWITCH .

3. Shorted wire check (OIL PRESS SW line):
   - 1. Jump the SCS line with the HDS.

     NOTE: This step must be done to protect the PCM from damage.

   - 2. Disconnect the following connectors.

     PCM connector B (49P)

     Oil pressure switch 1P connector

   - 3. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     PCM connector B (49P): disconnected

     Oil pressure switch 1P connector: disconnected

     Test circuit OIL PRESS SW

     Test point 1 Oil pressure switch 1P connector No. 1 (PNK)

     Test point 2 Body ground

GETtheMANUALS.org

Fig. 65: Checking For Continuity Between Oil Pressure Switch 1P Connector And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to ground in the OIL PRESS SW wire between the oil pressure switch and the PCM.

NO : **Update the PCM if it does not have the latest software** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then recheck. If the PCM was substituted, and the symptom/indication goes away, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** .

REWRITING THE ODO DATA AND TRANSFERRING THE MAINTENANCE MINDER™ DATA TO A NEW GAUGE CONTROL MODULE

PROCEDURE

1. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

GETtheMANUALS.org

Fig. 85: Identifying Data Link Connector Located Under Driver's Side Of Dashboard
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Rewriting the ODO Data and Transferring the Maintenance Minder™ Data to a New Gauge Control Module

NOTE:

- **Obtain a new gauge control module before starting the rewriting process. Only new gauges can be rewritten.**
- **Rewriting is not possible on a gauge control module that will not communicate with the HDS.**
- **Check the official Honda website for more information on how to write odometer information to a gauge control module that will not communicate with HDS.**
- **Make sure that the HDS shows the correct VIN for the vehicle you are working on.**
- **Once you have started this procedure, you must complete it before removing the HDS from the DLC.**
- **Connect a jumper battery (do not connect a battery charger) to insure that correct battery voltage will be maintained.**

Rewriting and Transferring

1. Select GAUGES from the BODY ELECTRICAL SYSTEM SELECT menu with the HDS.
2. Select GAUGE CONTROL MODULE REPLACEMENT (ODO Rewrite) from the ADJUSTMENT menu, and follow the instructions on the display to retrieve the ODO value.
3. Replace the gauge control module.
4. Select GAUGE CONTROL MODULE REPLACEMENT (ODO Rewrite) from the ADJUSTMENT menu, and select READ OUT DATA and save ODO value and Maintenance Minder Data into the HDS.

GETtheMANUALS.org

5. Select WRITE DATA and following the instructions on the HDS display, and install the ODO value and the Maintenance Minder Data into replaced gauge control module. If the data transfer fails, refer to the instructions below to release the locked ODO value.

How to Release Locked Odometer Mileage to the Original Gauge Control Module

If, after you attempt to transfer mileage to a new gauge control module, the odometer display has dashes (- - -), is garbled, or shows an incorrect value, the original gauge control module can be unlocked and restored to its original state. In this way, it can be used again for additional attempts to transfer the mileage:

1. Confirm that you have the latest HDS version of software.
2. Make sure that the HDS shows the correct VIN for the vehicle you are working on.
3. Turn the ignition switch to LOCK (0), reconnect the original gauge control module.
4. Completely re-boot the HDS.
5. Clear any stored DTCs.
6. Navigate to BODY ELECTRIC/GAUGES/GAUGE CONTROL MODULE REPLACEMENT (ODO REWRITE, etc.).
7. Select 3. RELEASING LOCKED ODO VALUE.
8. Follow the prompts and the odometer mileage will be restored.
9. Start over and make sure the screen prompts are followed.

SAFETY INDICATOR SYSTEM COMPONENT LOCATION INDEX

GETtheMANUALS.org

	TEST

GAUGE CONTROL MODULE INPUT TEST

NOTE:

- **Before testing, DO THE GAUGE CONTROL MODULE SELF-DIAGNOSTIC FUNCTION, and make sure the B-CAN communication lines are OK.**
- **Before testing, make sure the No. A29 (10 A) fuse in the under-hood fuse/relay box is OK.**
- **Before testing, make sure the No. B5 (10 A) fuse in the under-dash**

GETtheMANUALS.org

fuse/relay box is OK.

1. Turn the ignition switch to LOCK (0).
2. **Disconnect the gauge control module 32P connector** See **GAUGE CONTROL MODULE REMOVAL AND INSTALLATION** or REWRITING THE ODO DATA AND TRANSFERRING THE MAINTENANCE MINDER™ DATA TO A NEW GAUGE CONTROL MODULE.

Fig. 87: Identifying Gauge Control Module 32P Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Inspect the connector and socket terminals to be sure they are all making good contact:
   - If the terminals are bent, loose, or corroded, repair them as necessary, and recheck the system.
   - If the terminals are OK, go to step 4.
4. With the connector still disconnected, do the following input tests:
   - If any test indicates a problem, find and correct the cause, then recheck the system.
   - If all the input tests prove OK, go to step 5.

Cavity	Wire	Test condition	Test: Desired result	Possible cause if desired result is not obtained
15	GRN	Combination light switch ON	Connect to ground with a jumper wire: The dashlights should come on full bright.	• Faulty LEDs • An open or high resistance in the wire
16	RED	Combination light switch ON	Connect to ground with a jumper wire: The dashlights should come on full bright.	• Faulty bulbs • An open or high resistance in the wire
		Ignition switch ON	Measure the voltage to ground:	• Faulty MICU • Faulty combination light

GETtheMANUALS.org

9	BRN	(II), turn signal switch to LEFT	There should be battery voltage when the lights are flashing.	switch • An open or high resistance in the wire
10	GRN	Ignition switch ON (II), turn signal switch to RIGHT	Measure the voltage to ground: There should be battery voltage when the lights are flashing.	• Faulty MICU • Faulty combination light switch • An open or high resistance in the wire
5(1)	GRY	Disconnect the outside air temperature sensor 2P connector	Check for continuity between terminal No. 5 and outside air temperature sensor 2P connector terminal No. 2: There should be continuity.	An open or high resistance in the wire
			Check for continuity between terminal No. 5 and body ground: There should be no continuity.	A short to ground in the wire
6(1)	PNK	Disconnect the outside air temperature sensor 2P connector	Check for continuity between terminal No. 6 and outside air temperature sensor 2P connector terminal No. 1: There should be continuity.	An open or high resistance in the wire
			Check for continuity between terminal No. 6 and body ground: There should be no continuity.	A short to ground in the wire
(1) With manual A/C and outside air temperature indication function				

5. Reconnect the connector to the gauge control module, and do the following input tests:
   - If any test indicates a problem, find and correct the cause, then recheck the system.
   - If all the input tests prove OK, **replace the gauge control module** See **GAUGE CONTROL MODULE REMOVAL AND INSTALLATION** or REWRITING THE ODO DATA AND TRANSFERRING THE MAINTENANCE MINDER™ DATA TO A NEW GAUGE CONTROL MODULE.

Cavity	Wire	Test condition	Test: Desired result	Possible cause if desired result is not obtained
1	RED	Under all conditions	Measure the voltage to ground: There should be battery voltage.	• Blown No. A29 (10 A) fuse in the under-hood fuse/relay box • An open or high resistance in the wire

GETtheMANUALS.org

17	LT GRN	Ignition switch ON (II)	Measure the voltage to ground: There should be battery voltage.	• Blown No. B5 (10 A) fuse in the under-dash fuse/relay box • An open or high resistance in the wire
32	BRN	In all ignition switch positions	Measure the voltage to ground: There should be less than 0.2 V.	• Poor ground (G502) • An open or high resistance in the ground wire
4	BRN	In all ignition switch positions	Measure the voltage to ground: There should be less than 0.2 V.	• Poor ground (G502) • An open or high resistance in the ground wire

HANDSFREELINK SYSTEM SELF-DIAGNOSTIC FUNCTION

HOW TO CHECK THE HANDSFREELINK SYSTEM STATUS

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **The self-diagnostic function can only be initiated while the HFL system is in its idle state.**
- **The self-diagnostic function starts after you press and hold the Hang-up/BACK button on the HFL switch for 5 seconds, and ends if the HandsFreeLink control unit returns to its idle state.**

1. Turn the ignition switch to ON (II).
2. Press and hold the Hang-up/BACK button (A) for more than 5 seconds.

Fig. 1: Identifying Hang-Up/Back Button
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. When the HFL system enters the self-diagnostic function, the following will occurs:
   - If the HFL system does not respond, go to **HFL DOES NOT RESPOND TROUBLESHOOTING**:
     - **WITH NAVIGATION**
     - **USA AND CANADA MODELS WITHOUT NAVIGATION**
     - **EXCEPT USA AND CANADA MODELS WITHOUT NAVIGATION**
   - If the HFL system is OK, and there are no HFL DTCs, the HFL system says, "The HFT is OK."
   - If there are any HFL DTCs stored, the HFL system says, "The HFT is NG.". **CHECK FOR HFL DTCS**.

GETtheMANUALS.org

HOW TO TROUBLESHOOT THE HANDSFREELINK SYSTEM

HOW TO TROUBLESHOOT THE HANDSFREELINK SYSTEM

Introduction

The HFL system works only with Honda approved Bluetooth-enabled cell phones with a hands-free profile. If you are not sure if your cell phone is compatible with the HFL system or if it is configured correctly, Honda has a dedicated HFL customer service at 888-528-7876 and web site handsfreelink.honda.com, to answer your questions.

The HFL system allows you to make and receive hands-free calls. It cannot control the cell phone's performance (call quality and signal strength). For more information about performance and performance problems, refer to **DROPPED CALLS**.

Always call the HFL customer service first, not Tech Line because the HFL customer service has the latest information about cell phone software versions, settings and other issues.

Most HFL complaints are due to pairing, configuration, or compatibility issues. Contact the HFL customer service before replacing the HandsFreeLink control unit.

The customer service is open Monday thru Friday from 6:00 a.m. to 6:00 p.m. CST; Saturday from 7:00 a.m. to 6:00 p.m. CST; and Sunday from 8:00 a.m. to 6:00 p.m. CST.

Checking Cell Phone Compatibility

The most important step in troubleshooting HFL issues is to identify the customer's cell phone model, the software version, and the cellular carrier that experiences the HFL problem. Not all cell phones with the Bluetooth feature and a hands-free profile are compatible with the Honda HFL system.

The second most important step is to duplicate the customer's concern with their phone. If you do not duplicate the concern, you could replace good components and have the customer come back with the same complaint.

Go to handsfreelink.honda.com or call Honda's dedicated customer service at 888-528-7876, and check if the customer's cell phone is approved to work with the Honda HFL system.

NOTE:

- **These approved, archived, and currently testing cell phone model lists are constantly changing, so make sure you view them frequently.**
- **Phones are added as they are approved, and can be dropped if their specification changes.**
- **cell phones can be removed from the approved list if a software bug is discovered that makes the cell phone incompatible. These cell phones can be added back to the approved list if the phone manufacturer corrects the bug.**
- **If the software bug is corrected, a new software version is created and may be listed in the Supported Features section of the cell phone. If you**

GETtheMANUALS.org

have trouble finding the cell phone's software version, you can call the customer service at 888-528-7876.

- **The Honda web site handsfreelink.honda.com now includes the software versions that are tested and approved. When software versions are listed, you need to know which version is loaded on the cell phone to help you troubleshoot the customer's complaint. If you cannot access the Honda web site, call the customer service at 888-528-7876 for further assistance.**

Voice Tag Tips

HFL voice control and voice recognition is not supported in this model. The HFL system stores a simple voice tag for the Speed Dial. But HFL is controlled by using the navigation voice recognition system. If you want a complete description of this system, please refer to the Owner's Manual.

Pairing a Cell Phone

You must pair an approved Bluetooth-compatible cell phone to the HFL system before you can make and receive calls. For a current list of approved cell phones and specific cell phone pairing instructions for each cell phone, see **CHECKING CELL PHONE COMPATIBILITY**, go to handsfreelink.honda.com, or call the customer service at 888-528-7876.

The following procedure works for most Honda approved cell phones. If you cannot pair your cell phone to the HFL system with this procedure, refer to your cell phone's operating manual, vehicle's Owner's Manual, visit handsfreelink.honda.com, or call the customer service at 888-528-7876.

NOTE:

- **You cannot pair a cell phone while the vehicle is moving.**
- **The phone must be in discovery or search mode when it is pairing. Refer to the phone's owner's manual.**
- **The phone battery may drain faster when it is paired to the HFL.**
- **The default pairing code 0000 is used unless the setting was changed.**
- **If the phone is not ready for pairing, or not found by the system within 3 minutes, the HFL system times out and returns to idle.**
- **A maximum of six approved Bluetooth-compatible cell phones can be paired to the system.**

Automatically Pairing a Cell Phone when There are no Other Cell Phones Paired (with navigation)

NOTE: **The following procedure automatically pairs a phone. Not all phones will pair automatically. If the phone does not pair automatically, go to MANUALLY PAIRING A CELL PHONE WHEN THERE ARE NO OTHER CELL PHONES PAIRED (WITH NAVIGATION).**

1. Turn the ignition switch to ACCESSORY (I), and make sure the cell phone you are pairing is on and in its discovery mode.
2. Select OK on the navigation Confirmation screen.

GETtheMANUALS.org

3. Press the cell phone button on the audio-navigation unit. A cell phone Confirmation screen appears on the display, select Yes to add a new phone.

Fig. 2: Display - Cell Phone Confirmation Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Confirm the cell phone is in its discovery mode, then select OK.
5. Once the cell phone is discovered by the HFL, select the phone on the screen.

NOTE: **If the HFL does not find the cell phone, select Find Another cell phone, then, when prompted, enter the PIN into the phone.**

Fig. 3: Display - Cell Phone Name On Screen

Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Select Add/Select a phone.

Fig. 8: Display - Add/Select Phone Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Select Add a New Phone.

Fig. 9: Display - Other Phone Pairing Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Confirm the cell phone is in its discovery mode, then select OK.
9. Once the cell phone is discovered by the HFL, select the phone on the screen.

NOTE: If the HFL does not find the cell phone, select Find Another cell phone,

GETtheMANUALS.org

then, when prompted, enter the PIN into the phone.

10. When the 4-digit pairing code appears on the audio display, enter this code into the cell phone.
11. Once the cell phone is successfully paired, the screen displays The phone has been added.

Fig. 10: Display - Cell Phone Successfully Paired Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Pairing a Cell Phone when There are no Other Cell Phones Paired (without navigation)

1. Turn the ignition switch to ACCESSORY (I), and make sure the cell phone you are pairing is on and in its discovery mode.
2. Wait until the time appears on the screen.
3. Press the PHONE button on the audio unit, then select Yes on the confirmation screen by pressing the selector knob.

Fig. 11: Display - Other Cell Phone Pairing Confirmation Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Confirm the cell phone is in its discovery mode, then press the selector knob.
5. Once the cell phone is discovered by the HFL, rotate the selector knob to select the phone, then press the selector knob to select OK.

NOTE: **If the HFL does not find a cell phone, select cell phone Not Found? from the menu, then, when prompted, enter the PIN into the phone.**

GETtheMANUALS.org

6. When the 4-digit pairing code appears on the audio display, enter this code into the cell phone.
7. Once the cell phone is successfully paired, the screen displays "(phone name) PHONE" has been added.

Fig. 14: Display - Cell Phone Pairing Confirmation Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Pairing additional Cell phones (with navigation)

1. Turn the ignition switch to ACCESSORY (I), and make sure the cell phone you are pairing is on and in its discovery mode.
2. Select OK on the navigation Confirmation screen.
3. Press the PHONE button on the audio-navigation unit, then select Phone Setup from the PHONE menu.

GETtheMANUALS.org

If none of the previously paired cell phones are in the vehicle, a cell phone Confirmation screen appears stating there is no cell phone connected. Select No to go to the phone menu. Select Phone Setup, then go to step 4.

Fig. 15: Display - Cell Phone Menu Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Select Add/Select a phone from the Phone Setup menu.

Fig. 16: Display - Add/Select Cell Phone Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Select Search from the Bluetooth Setup menu.

Fig. 17: Display - Bluetooth Setup Menu Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

6. Make sure the cell phone is in its discovery mode, and press OK.
7. Once the cell phone is discovered by the HFL, select the phone from the displayed list.

NOTE: **If the HFL does not find the cell phone, select Find Another cell phone, then, when prompted, enter the PIN into the phone.**

Fig. 18: Display - Cell Phone Pairing Code Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. When the 4-digit pairing code appears on the audio display, enter this code into the cell phone.
9. Once the cell phone is successfully paired, the screen displays "(phone name) PHONE" has been added.

Pairing additional Cell phones (without navigation)

1. Turn the ignition switch to ACCESSORY (I), and make sure the cell phone you are pairing is on and in its discovery mode.
2. Wait until the time appears on the multi-information display.
3. Press the PHONE button on the audio unit, then select Yes on the confirmation screen by pressing the selector knob.

   If none of the previously paired cell phones are in the vehicle, a phone confirmation screen appears stating there is no cell phone connected. Select No to go to the Phone Setup menu.

Pairing Troubleshooting

Many pairing issues are resolved by altering the customer's cell phone settings.

If you cannot get an approved HFL cell phone to pair, contact Honda's dedicated customer service at 888-528-7876, or go to handsfreelink.honda.com.

Dropped Calls

Customers may perceive dropped calls as being an HFL system fault, but most dropped calls are resultant from cell phone and cell phone carrier issues. The HFL system does not directly handle the cell phone signal. It allows the cell phones to transmit the cell phone audio over the vehicle's audio system.

Many dropped calls issues can be resolved by changing the customer's cell phone settings. For help on approved HFL settings, contact Honda's dedicated customer service at 888-528-7876, or go to handsfreelink.honda.com.

Always confirm with the Customer if the number of dropped calls is higher while using the HFL system as opposed to using the cell phone only. Customers often confuse problems with their cell phone or carrier as a problem with the HFL system. The HFL system cannot control or determine:

- Cellular connection quality
- Signal strength
- Cellular coverage
- Ambient weather conditions that affect cellular signals

When a customer complains about dropped calls, ask questions about when or where the calls are dropped, such as:

- Do you drive the same route on a regular basis?
- Does the call drop in the same location?
- Where do you keep your cell phone (in a purse or backpack)?
- Have you compared the number of dropped calls using the HFL versus making calls from the handset?
- Are they comparing their HFL performance to a system from a different manufacturer?

GETtheMANUALS.org

There are many reasons for a dropped call that are not related to the HFL system. Here are some causes for dropped calls:

- If the quantity of dropped calls is about the same when the customer uses the HFL system versus the handset, the issue is likely due to the cellular phone or carrier.
- If the cell phone is equipped with a retractable antenna, it needs to be extended to maximize signal strength.
- If a customer also notices that the calls tend to drop in the same areas, the HFL system may be operating normally, but something about the area diminishes cellular coverage to a point where the call drops.
- Hills or mountains can block or interfere with cellular signals.
- High-rise buildings, bridges, or other large structures may block or interfere with cellular signals.
- Electrical storms, heavy rain, or overcast conditions interfere with signal strength.
- Placing the cell phone in a purse, in a metal briefcase, under the seat, in the glove box, or in the trunk can all affect signal reception.
- There are coverage gaps in the cellular service. When driving, a call is typically passed from one tower to another. If the customer drives through an area where there is a coverage gap between towers, the call drops.
- The cell phone battery's state of change can affect signal reception. A low battery may reduce the cell phone's ability to boost the antenna's power and function properly, especially in low signal strength areas. Some cell phone manufacturers trade off signal transmission and reception strength for battery life. As the battery weakens, the signal strength may also weaken. Some cell phones may operate more effectively than others in low signal strength areas especially with a partially charged battery.

Phone will not Automatically Connect to the HFL

NOTE: If they are on the phone when they enter the vehicle, refer to the Automatic Transferring section in the O/M for more information.

If a customer complains that their cell phone is not automatically connecting to the HFL system when they enter the vehicle, do the following:

1. Make sure the Bluetooth feature is turned on in the cell phone.
2. Make sure the cell phone is properly paired to the HFL system.
3. Do a soft reset to the cell phone.
4. Check if the cell phone has an Authorized Connection or Trusted option.
5. Check the battery and signal strength on the cell phone. Pairing a cell phone requires optimal signal strength and a nearly full battery.

How to Check the HFL DTC's (with navigation)

1. Turn the ignition switch to ON (II).
2. Press and hold the MAP/GUIDE, the DEST, and the CANCEL buttons for 3 seconds or more, and the self-diagnosis begins. Select the Detail Information & Setting.

GETtheMANUALS.org

Fig. 27: Display - Self-Diagnosis Mode And Detail Information & Setting Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Select the Unit Check from the Detail Information & Setting menu.

Fig. 28: Display - Detail Information & Setting Menu
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Select the HFL from the Unit Check menu.

Fig. 29: Display - HFL Unit Check Menu Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Check the GA-NET status:
   - If OK, go to step 6.
   - If NG, **GO TO HFL DOES NOT RESPOND (WITH NAVIGATION) TROUBLESHOOTING**.

GETtheMANUALS.org

Fig. 30: Display - Software Updation Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Check the HFL status:
   - If OK, go to step 7.
   - **IF B1792 IS DISPLAYED, GO TO DTC B1792 TROUBLESHOOTING** .
7. Return to the Detail Information & Setting menu, and select the Functional Setup.

Fig. 31: Display - Detail Information & Setting Menu Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Select the Mic Level from the Functional Setup menu.

Fig. 32: Display - Functional Setup Menu Mic Level Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Check the MIC and the STRG SW status:

GETtheMANUALS.org

- If OK, there was an intermittent failure, the system is OK at this time.
- If any DTC(s) are displayed, troubleshoot the indicated DTC(s).

Fig. 33: Display - MIC And STRG SW Status Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. To end the self-diagnostic function, select the Return, or turn the ignition switch to LOCK (0).

How to Check the HFL DTC's (without navigation)

NOTE: **If there are any paired cell phones connected to the HFL, they are temporarily disconnected during this procedure.**

1. Turn the ignition switch to ON (II).
2. Make sure the audio unit is turned off.
3. Use the DISPLAY button on the steering wheel to select the screen that displays Audio Off.
4. Press and hold the preset No. 1 and No. 6 buttons.
5. While holding the buttons, press the POWER button.
6. Release the buttons, and the self-diagnosis begins (A-Diag is displayed).

GETtheMANUALS.org

Fig. 34: Display - A-Diag Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Press and hold the PHONE button for more than 5 seconds to enter the HFL diagnostic mode.
8. When you are in the HFL diagnostic mode, pressing a preset button starts the diagnostic mode that is assigned to that preset button. To exit this mode, go to step 12. Once you exit this test, you must start again at step 1.
   - No. 1 button: The HFL DTC display mode
   - No. 2 button: The HandsFreeLink control unit software version display mode **(USA and Canada models: HandsFreeLink control unit update function is available)** See **HANDSFREELINK CONTROL UNIT REMOVAL AND INSTALLATION** or **HANDSFREELINK CONTROL UNIT UPDATE**
   - No. 3 button: The HandsFreeLink control unit parts number display mode
9. Check the HandsFreeLink control unit software version (No. 2 button) and parts number (No. 3 button). If the Part number and software version is not displayed, there may be a problem with the GA-Net. Go to **HFL DOES NOT RESPOND TROUBLESHOOTING**; **USA AND CANADA MODELS**, **EXCEPT USA AND CANADA MODELS**.
10. Check the HFL DTC. Each time you press the No. 1 button, the screen displays HFL DTCs in following order:
    - B1775 (OK or NG)
    - B1776 (OK or NG)
    - B1779 (OK or NG)
    - B1780 (OK or NG)
    - B1792 (OK or NG)

GETtheMANUALS.org

Fig. 35: Display - A-Diag B 1775 Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. If any HFL DTC is NG, troubleshoot the indicated HFL DTC(s).
12. To end the self-diagnostic function, turn the audio unit off, or turn the ignition switch to LOCK (0).

HANDSFREELINK CONTROL UNIT REMOVAL AND INSTALLATION

REMOVAL

1. Center Maintenance Cover
    1. Remove the maintenance cover (A).

GETtheMANUALS.org

Fig. 40: Identifying Maintenance Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Shift Lever Panel (AT)
    1. Carefully pry out the shift lever panel (A) with the appropriate trim tool to detach the clips (B, C) and the hooks (D), then remove the shift lever panel.

Fig. 41: Identifying Shift Lever Panel, Hooks And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. HandsFreeLink Control Unit
    1. Disconnect the connector.

GETtheMANUALS.org

2. Remove the HandsFreeLink control unit (A).

Fig. 42: Identifying Handsfreelink Control Unit
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. HandsFreeLink Control Unit
    1. Connect the connector.
    2. Install the HandsFreeLink control unit (A).

    After replacing the HandsFreeLink control unit, tell the customer:

    - They need to pair their phones to the system.
    - They need to set up their system preferences.
    - Update the HFL if it does not have the latest software.

GETtheMANUALS.org

Fig. 43: Identifying Handsfreelink Control Unit With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Shift Lever Panel (AT)
    1. Install the shift lever panel (A). Make sure the clips (B, C) and the hooks (D) snap into place securely.

Fig. 44: Identifying Shift Lever Panel, Hooks And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Center Maintenance Cover

GETtheMANUALS.org

1. Install the maintenance cover (A).

HANDSFREELINK CONTROL UNIT UPDATE

PROCEDURE

- Before you update the HandsFreeLink control unit, make sure the battery in the vehicle is fully charged, and connect a jumper battery (not a battery charger) to maintain system voltage.
- Never turn the ignition switch to ACCESSORY (I) or to LOCK (0) during the update. If there is a problem with the update, leave the ignition switch turned to ON (II).
- To ensure the latest program is installed, do a HandsFreeLink control unit update whenever the HandsFreeLink control unit is substituted or replaced.
- The HandsFreeLink control unit is updated via Bluetooth using the HFL control unit update application on the HDS PC. Make sure the HDS PC is inside the vehicle when updating the HFL control unit.

1. HandsFreeLink Control Unit Update

   With Navigation

   1. Turn the ignition switch to ON (II).

GETtheMANUALS.org

Fig. 46: Identifying Audio Navigation Unit
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Press and hold the MAP/GUIDE, DEST, and CANCEL buttons for 3 seconds or more, and the self-diagnosis begins.
3. When the Select Diagnosis Items menu appears, select Self-Diagnosis Mode.

Fig. 47: Display - Self-Diagnosis Mode And Detail Information & Setting Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Select the HFL from the System Links menu.

GETtheMANUALS.org

Fig. 48: Display - System Links Menu HFL Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Open the HFL control unit update application on the HDS PC.
6. Select the Software Update from the vehicle's HFL menu.

Fig. 49: Display - HFL Menu Software Update Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. A PASS (pin code) appears on the vehicle's HFL menu. To start the update, enter this PASS into the HFL control unit update application.

NOTE: **If the HFL is not able to connect with the HFL control unit application after 5 minutes, the HFL control unit times out. If the control unit times out, turn the ignition switch to LOCK (0), then go to step 1 and try again.**

GETtheMANUALS.org

Fig. 50: Identifying Proper And Improper HFL Software Version Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. When the update finishes, the message Update completed appears on the vehicle's HFL menu. Select Confirm Software Version to check that the HFL control unit is updated. If the unit did not update, turn the ignition switch to LOCK (0), then go to step 1 and try again. To end the System Diagnostic Mode, turn the audio system off, or turn the ignition switch to LOCK (0). If you cannot select the HFL from the System Links menu, go to step 9.
9. Turn the ignition switch to LOCK (0), and then back to ON (II).
10. Open the HFL control unit update application on the HDS PC.
11. Use the previously used PASS to start the HFL control unit update.

NOTE: **If the HFL update was unsuccessful, the previously used pin code is displayed on the HFL control unit update application.**

12. Update HFL unit. If you cannot access the unit, restart your HDS PC, then go to step 9.
13. When the update finishes, turn the ignition switch to LOCK (0), and then back to ON (II).
14. Go to the Self-Diagnosis Mode and check the software version information that appears on the vehicle's HFL menu.

Without Navigation

1. Turn the ignition switch to ON (II).

GETtheMANUALS.org

Fig. 51: Identifying Audio Unit
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Make sure the audio system is turned off.
3. Push and hold the preset No. 1 and No. 6 buttons.
4. While holding the buttons, press the PWR ( ) button to on.
5. Release all the buttons, and the self-diagnosis begins.
6. Push and hold the PHONE button for 5 seconds.
7. Open the HFL control unit update application on the HDS PC.

Fig. 52: Identifying Audio Unit And Multi-Information Display Unit
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

8. Push the preset No. 2 button several times until update appears on the audio display.
9. Push the VOL PUSH SELECT button.
10. A PASS (pin code) appears on the vehicle's HFL menu. To start the update, enter this PASS into the HFL control unit update application.

NOTE: **If the HFL is not able to connect with the HFL control unit application after 5 minutes, the HFL control unit times out. If the control unit times out, turn the ignition switch to LOCK (0), then go to step 1 and try again.**

Fig. 53: Identifying Proper And Improper HFL Control Unit Update Application
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. When the update finishes, the message Update completed appears on the vehicle's HFL menu. Select Confirm Software Version to check that the HFL control unit is updated. If the unit did not update, turn the ignition switch to LOCK (0), then go to step 1 and try again. To end the System Diagnostic Mode, turn the audio system off, or turn the ignition switch to LOCK (0). If you cannot select the HFL from the System Links menu, go to step 12.
12. Turn the ignition switch to LOCK (0), and then back to ON (II).
13. Open the HFL control unit update application on the HDS PC.
14. Use the previously used PASS to start the HFL control unit update.

NOTE: **If the HFL update was unsuccessful, the previously used pin code is displayed on the HFL control unit update application.**

GETtheMANUALS.org

15. Update HFL unit. If you cannot access the unit, restart your HDS PC, then go to step 12.
16. When the update finishes, turn the ignition switch to LOCK (0), and then back to ON (II).
17. Go to Self-Diagnosis Mode and verify the HFL software is updated by pressing the preset No. 2 button several times until the software version information appears.

HANDSFREELINK SYSTEM DTC TROUBLESHOOTING INDEX

HANDSFREELINK CONTROL UNIT

DTC	Description	DTC Type
B1775	Microphone input/output shorted to power or open (with moonroof)	Signal error
B1775	Microphone input/output shorted to power or open (without moonroof)	Signal error
B1776	Microphone input/output shorted to ground	Signal error
B1779	HandsFreeLink steering wheel switch failure	Signal error
B1780	HandsFreeLink steering wheel switch line short	Signal error
B1792	HandsFreeLink control module error	Internal error

BLUETOOTH AUDIO DOES NOT WORK (WITH NAVIGATION)

Fig. 56: Handsfreelink System Symptom Troubleshooting Flow Chart (Bluetooth Audio Does Not Work)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **BEFORE YOU TROUBLESHOOT, MAKE SURE TO FOLLOW THE HOW TO TROUBLESHOOT THE HANDSFREELINK SYSTEM.**
- **Make sure the cell phone with Bluetooth is Honda approved and configured correctly. Online, go to handsfreelink.honda.com, or call the HFL customer service at 888-528-7876.**

GETtheMANUALS.org

- **You must be able to duplicate the customer's concern to successfully diagnose the problem. If you cannot duplicate the issue, have the customer demonstrate it.**
- **Once the symptom is duplicated, contact the HFL support desk at 888-528-7876. Many HFL issues are related to the cell phone and not the HFL system.**
- **See if you can duplicate the symptom in a known-good vehicle under the same conditions. If you can, it is probably a characteristic of the system.**
- **Always use the customer's cell phone to successfully diagnose the problem.**

1. Determine possible failure area (GA-NET circuit, others):
   - 1. Turn the ignition switch to ON (II).
   - 2. Press the AUDIO button to check if the navigation display changes to the Bluetooth audio information screen.

   Is the Bluetooth audio information displayed?

   YES : Go to step 2.

   NO : Go to appropriate troubleshooting symptom **HFL does not respond (Navigation)** troubleshooting.

2. Problem verification:
   - 1. Pair an approved known-good cell phone with Bluetooth audio to the vehicle.

   Can you pair an approved cell phone with Bluetooth audio?

   YES : Intermittent failure, the system is OK at this time, or there could be an issue with the customer's cell phone.

   NO : Go to **Bluetooth cell phone cannot be paired** troubleshooting.

BLUETOOTH AUDIO DOES NOT WORK (WITHOUT NAVIGATION)

GETtheMANUALS.org

Fig. 57: Handsfreelink System Symptom Troubleshooting Flow Chart (Bluetooth Audio Does Not Work)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **BEFORE YOU TROUBLESHOOT, MAKE SURE TO FOLLOW THE HOW TO TROUBLESHOOT THE HANDSFREELINK SYSTEM.**
- **Make sure the cell phone with Bluetooth is Honda approved and configured correctly. Online, go to handsfreelink.honda.com, or call the HFL customer service at 888-528-7876.**
- **You must be able to duplicate the customer's concern to successfully diagnose the problem. If you cannot duplicate the issue, have the customer demonstrate it.**
- **Once the symptom is duplicated, contact the HFL support desk at 888-528-7876. Many HFL issues are related to the cell phone and not the HFL system.**
- **See if you can duplicate the symptom in a known-good vehicle under the same conditions. If you can, it is probably a characteristic of the system.**
- **Always use the customer's cell phone to successfully diagnose the problem.**

1. Determine possible failure area (GA-NET circuit, others):
    - 1. Turn the ignition switch to ON (II).
    - 2. Turn on the audio unit, and press the AUX button to check if it changes to Bluetooth audio source.

GETtheMANUALS.org

Does the display change to Bluetooth audio source?

YES : Go to step 2.

NO : Go to **HFL does not respond (Without Navigation)** troubleshooting.

NO : Go to **HFL does not respond (Navigation)** troubleshooting.

2. Problem verification:
    - 1. Pair an approved known-good cell phone with Bluetooth audio to the vehicle.

Can you pair an approved cell phone with Bluetooth audio?

YES : Intermittent failure, the system is OK at this time, or there could be an issue with the customer's phone. Recommend that your customer contact the HFL support desk at 888-528-7876 to discuss approved phones and configuration issues.

NO : Go to **Bluetooth cell phone cannot be paired** troubleshooting.

BLUETOOTH CELL PHONE CANNOT BE PAIRED

GETtheMANUALS.org

HandsFreeLink System Symptom Troubleshooting - Bluetooth cell phone can not be paired

GETtheMANUALS.org

Fig. 58: Handsfreelink System Symptom Troubleshooting Flow Chart (Bluetooth Cell Phone Cannot Be Paired)

- **See if you can duplicate the symptom in a known-good vehicle under the same conditions. If you can, it is probably a characteristic of the system.**
- **Always use the customer's cell phone to successfully diagnose the problem.**

1. HFL system check:
   - 1. Turn the ignition switch to ON (II).
   - 2. **DO THE HFL SELF-DIAGNOSTIC FUNCTION**.

   Do you hear, "The HFT is OK"?

   YES : Go to step 2.

   YES : Go to step 4.

   YES : Go to step 3.

   NO : **GO TO HFL DOES NOT RESPOND (WITH NAVIGATION) TROUBLESHOOTING**.

   NO : **GO TO HFL DOES NOT RESPOND (USA AND CANADA MODELS WITHOUT NAVIGATION) TROUBLESHOOTING**.

   NO : **GO TO HFL DOES NOT RESPOND (EXCEPT USA AND CANADA MODELS WITHOUT NAVIGATION) TROUBLESHOOTING**.

2. HandsFreeLink control unit check (update):
   - 1. **Do the HandsFreeLink control unit Update** See **HANDSFREELINK CONTROL UNIT REMOVAL AND INSTALLATION** or **HANDSFREELINK CONTROL UNIT UPDATE**, and

GETtheMANUALS.org

check if the latest software is installed in the HandsFreeLink control unit.

Is the software the latest version?

YES : If you have the customer's cell phone, go to step 4.

YES : If you do not have the customer's cell phone, go to step 3.

NO : **Update the HandsFreeLink control unit** See **HANDSFREELINK CONTROL UNIT REMOVAL AND INSTALLATION** or **HANDSFREELINK CONTROL UNIT UPDATE**, and recheck.

3. Problem verification:
   - 1. Pair a known-good cell phone with Bluetooth to the customer's vehicle.

Can you pair the cell phone, and does it operate normally?

YES : The customer's cell phone may be defective or not compatible. Recommend that your customer contact the HFL support desk at 888-528-7876 to discuss approved phones and configuration issues.

NO : **Replace the HandsFreeLink control unit** See **HANDSFREELINK CONTROL UNIT REMOVAL AND INSTALLATION** or **HANDSFREELINK CONTROL UNIT UPDATE**.

4. Problem verification:
   - 1. Pair the customer's cell phone with Bluetooth to a known-good vehicle.

Can you pair the cell phone, and does it operate normally?

YES : **Replace the HandsFreeLink control unit** See **HANDSFREELINK CONTROL UNIT REMOVAL AND INSTALLATION** or **HANDSFREELINK CONTROL UNIT UPDATE**.

NO : The customer's cell phone with Bluetooth may be defective or not compatible. Check online at handsfreelink.honda.com, or call the HFL customer service at 888-528-7876 to make sure the customer's cell phone is compatible with the HFL system and that there are no known issues.

HFL DOES NOT RESPOND (WITHOUT NAVIGATION)

NOTE: **CHECK THE VEHICLE BATTERY CONDITION FIRST .**

1. Problem verification 1:
   - 1. Turn the ignition switch to ON (II).
   - 2. Press the PHONE button, and check if the multi-information display changes to the HFL information screen.

   Is the HFL information displayed?

   YES : Go to step 2.

   NO : The failure is duplicated, go to step 3.

2. Problem verification 2:
   - 1. **DO THE HFL SELF-DIAGNOSTIC FUNCTION**.

   Is HFL message played?

   YES : Intermittent failure, the system is OK at this time.

   YES : **CHECK FOR HFL DTCS**.

   NO : **GO TO THE HFL MESSAGES CANNOT BE HEARD OR ARE WEAK (HFL INFORMATION DISPLAY IS NORMAL) (WITHOUT NAVIGATION) TROUBLESHOOTING**.

3. Determine possible failure area (GA +B line, others):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Measure the voltage between test points 1 and 2.

     Test condition IG LOCK (0)

     Test circuit GA +B

     Test point 1 HandsFreeLink control unit 32P connector No. 32 (RED)

     Test point 2 Body ground

GETtheMANUALS.org

Fig. 61: Measuring Voltage Between Handsfreelink Control Unit 32P Connector No. 32 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The GA +B wire is OK. Go to step 6.

NO : Go to step 4.

4. Open wire check (GA +B line):
   - 1. Measure the voltage between test points 1 and 2.

     Test condition IG LOCK (0)

     Test circuit GA +B

     Test point 1 Audio unit connector C (14P) No. 6 (RED)

     Test point 2 Body ground

Fig. 62: Measuring Voltage Between Audio Unit Connector C (14P) No. 6 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : Repair an open or high resistance in the wire between the audio unit and the HandsFreeLink

GETtheMANUALS.org

control unit.

NO : REPLACE THE AUDIO UNIT .

5. Shorted wire check (GA +B line):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Disconnect the following connectors:

      Audio-navigation unit connector C (14P)

      HandsFreeLink control unit connector (32P)

      XM receiver connector A (14P) (with XM)

    - 3. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      Audio unit connector C (14P): disconnected

      HandsFreeLink control unit 32P connector: disconnected

      XM receiver A (14) (with XM) connector: disconnected

      Test circuit GA +B

      Test point 1 Audio unit connector C (14P) No. 6 (RED)

      Test point 2 Body ground

Fig. 63: Checking Continuity Between Audio Unit Connector C (14P) No. 6 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to ground in the wire between the audio unit and the HandsFreeLink control unit.

GETtheMANUALS.org

NO : REPLACE THE AUDIO UNIT .

6. Determine possible failure area (GA GND line, others):
    - 1. Turn the ignition switch to ON (II).
    - 2. Measure the voltage between test points 1 and 2.

    Test condition IG ON (II)

    Test circuit GA GND

    Test point 1 HandsFreeLink control unit 32P connector No. 16 (BLK)

    Test point 2 Body ground

Fig. 64: Measuring Voltage Between Handsfreelink Control Unit 32P Connector No. 16 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 0.2 V?

YES : The GA GND wire is OK. Go to step 8.

NO : Go to step 7.

7. Open wire check (GA GND line):
    - 1. Measure the voltage between test points 1 and 2.

    Test condition IG ON (II)

    Test circuit GA GND

    Test point 1 Audio unit connector C (14P) No. 10 (BLK)

    Test point 2 Body ground

GETtheMANUALS.org

Fig. 70: Checking Continuity Between Audio Unit Connector C (14P) No. 11, 12 And Handsfreelink Control Unit 32P Connector No. 12, 13
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The GA BUS+ and the GA BUS- wires are OK. Go to step 13.

NO : There is an open in the wire(s) between the HandsFreeLink control unit and the audio unit. Replace the affected shielded harness.

13. Determine possible failure area (related unit, others):
    - 1. Reconnect the HandsFreeLink control unit 32P connector and audio unit connector C (14P).
    - 2. Turn the ignition switch to ON (II).
    - 3. **DO THE HFL SELF-DIAGNOSTIC FUNCTION**.

Do you hear, "The HFT is OK"?

YES : Go to step 14.

YES : **REPLACE THE MULTI-INFORMATION DISPLAY UNIT** .

NO : Go to step 15.

14. Multi-information display unit check:
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Reconnect multi-information display unit connector A (32P).
    - 3. Turn the ignition switch to ON (II).
    - 4. **DO THE HFL SELF-DIAGNOSTIC FUNCTION**.

Do you hear, "The HFT is OK"?

GETtheMANUALS.org

YES : REPLACE THE XM RECEIVER .

NO : **REPLACE THE MULTI-INFORMATION DISPLAY UNIT** .

15. Audio unit check:
    - 1. Turn the ignition switch to LOCK (0).
    - 2. **Substitute a known-good HandsFreeLink control unit, and recheck** See **HANDSFREELINK CONTROL UNIT REMOVAL AND INSTALLATION** or **HANDSFREELINK CONTROL UNIT UPDATE**.

Does the symptom go away?

YES : Replace the original HandsFreeLink control unit.

NO : REPLACE THE AUDIO UNIT .

HFL DOES NOT RESPOND (NAVIGATION)

GETtheMANUALS.org

Fig. 71: Handsfreelink System Symptom Troubleshooting Flow Chart (HFL Does Not Respond)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **CHECK THE VEHICLE BATTERY CONDITION FIRST .**

GETtheMANUALS.org

1. Determine possible failure area (HFL system, others):
    - 1. Turn the ignition switch to ON (II).
    - 2. Turn on the audio system, and press the AUDIO button to check if the multi-information display changes to the audio information screen.

    Is the audio information displayed?

    YES : Go to step 2.

    NO : Go to **Audio system information does not display on the multi-information display unit (Navigation)** troubleshooting.

2. Problem verification 1:
    - 1. Press the PHONE button and check if the navigation display changes to the HFL information screen.

    Is the HFL information displayed?

    YES : Go to step 3.

    NO : The failure is duplicated, go to step 4.

3. Problem verification 2:
    - 1. **DO THE HFL SELF-DIAGNOSTIC FUNCTION**.

    Is HFL message played?

    YES : Intermittent failure, the system is OK at this time. If possible, have the customer demonstrate the issue.

    YES : **CHECK FOR HFL DTCS**.

    NO : Go to **HFL does not respond (Navigation)** troubleshooting.

4. Determine possible failure area (GA +B line, others):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Measure the voltage between test points 1 and 2.

        Test condition IG LOCK (0)

        Test circuit GA +B

        Test point 1 HandsFreeLink control unit 32P connector No. 32 (RED)

        Test point 2 Body ground

GETtheMANUALS.org

Fig. 72: Measuring Voltage Between Handsfreelink Control Unit 32P Connector No. 32 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The GA +B wire is OK. Go to step 7.

NO : Go to step 5.

5. Open wire check (GA +B line):
   - 1. Measure the voltage between test points 1 and 2.

     Test condition IG LOCK (0)

     Test circuit GA +B

     Test point 1 Audio-navigation unit connector C (14P) No. 6 (RED)

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The GA BUS+ and the GA BUS- wires are OK. Go to step 10.

NO : There is an open in the wire(s) between the HandsFreeLink control unit and the audio-navigation unit. Replace the affected shielded harness.

10. Audio-navigation unit check:
    - 1. **Substitute a known-good HandsFreeLink control unit** See **HANDSFREELINK CONTROL UNIT REMOVAL AND INSTALLATION** or **HANDSFREELINK CONTROL UNIT UPDATE**, and recheck.

Does to symptom go away?

YES : Replace the original HandsFreeLink control unit.

NO : REPLACE THE AUDIO-NAVIGATION UNIT .

NO SOUND WHEN BLUETOOTH AUDIO IS USED

GETtheMANUALS.org

HandsFreeLink System Symptom Troubleshooting - No sound when Bluetooth audio is used

Fig. 78: Handsfreelink System Symptom Troubleshooting Flow Chart (No Sound When Bluetooth Audio Is Used)

Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

NOTE:

- **<u>CHECK THE VEHICLE BATTERY CONDITION FIRST</u> .**
- **Once the symptom is duplicated, contact the HFL support desk at 888-528-7876. Many HFL issues are related to the cell phone and not the HFL system.**
- **Set the fader and the balance positions to the center.**
- **Check if the cell phone with Bluetooth audio functions normally.**
- **Make sure the cell phone is properly paired.**
- **Make sure the cell phone's Bluetooth volume level is set to max.**
- **Make sure the customer's cell phone with Bluetooth is compatible with the Honda HFL system.**
- **Check the connectors for poor connections or loose terminals.**

1. Determine possible failure area (audio system, HFL system):
   - 1. Turn the ignition switch to ON (II).
   - 2. Check that the audio system is operating normally, from different audio sources (AM/FM and CD) and the speaker sound levels are normal.

   Does the audio system work normally and is the audio output from the speaker normal when playing various audio sources?

   YES : Go to step 2.

   NO : Refer to the audio system Symptom Troubleshooting.

2. Determine possible failure area (pairing, others):
   - 1. Pair an approved known-good cell phone with Bluetooth audio to the vehicle.

   Can you pair an approved cell phone with Bluetooth audio?

   YES : Go to step 3.

   NO : Go to **<u>Bluetooth cell phone cannot be paired</u>** troubleshooting.

3. Problem verification:
   - 1. Check if the cell phone with Bluetooth audio can be played.

   Does the Bluetooth audio play?

   YES : Intermittent failure, the system is OK at this time, or there could be an issue with the customer's phone. Make sure the cell phone's bluetooth volume is set to max.

   NO : The failure is duplicated, go to step 4.

4. Determine possible failure areas (XM receiver, multi-information display)

GETtheMANUALS.org

- 1. Disconnect the following connectors:

  XM receiver connector A (14P)

  Multi-information display connector A (32P)

- 2. Turn the ignition switch to ON (II), and recheck.

Does the symptom go away?

YES : Go to step 5.

NO : Go to step 6.

5. Determine possible failure areas (XM receiver, multi-information display)
   - 1. Reconnect the multi-information display connector A (32P), and recheck.

Does the symptom come back?

YES : **REPLACE THE MULTI-INFORMATION DISPLAY** .

NO : REPLACE THE XM RECEIVER .

6. Shorted wire check (GA AUDIO lines):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connectors.

     Audio-navigation unit connector C (14P)

     Multi-information display unit connector A (32P)

     HandsFreeLink control unit 32P connector

     XM receiver connector A (14P)

   - 3. Check for continuity between these test points and body ground individually.

     Test condition IG LOCK (0)

     Audio-navigation unit connector C (14P): disconnected

     Multi-information display unit connector A (32P): disconnected

     HandsFreeLink control unit 32P connector: disconnected

     XM receiver connector A (14P): disconnected

THE HFL PROMPTS CANNOT BE HEARD OR ARE WEAK (HFL INFORMATION DISPLAY IS NORMAL)

GETtheMANUALS.org

HandsFreeLink System Symptom Troubleshooting - The HFL prompts cannot be heard or are weak (HFL information display is normal)

Fig. 88: Handsfreelink System Symptom Troubleshooting Flow Chart (HFL Information Display Is Normal)

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **The HFL volume affects both the prompts and the incoming calls. For example, if you turn down the volume during an incoming call, you also turn down the volume on the HFL prompts. Customers may turn down the volume because a call is loud, not realizing they turned down the HFL prompt volume.**
- **Check the connectors for poor connections or loose terminals.**

1. Determine possible failure area (audio system, HFL system):
   - 1. Turn the ignition switch to ON (II).
   - 2. Check that the audio system is operating normally, from different audio sources (AM/FM and CD) and the speaker sound levels are normal.

   Does the audio system work normally, and is the audio output from the speaker normal when playing various audio sources?

   YES : Go to step 2.

   NO : Refer to the audio system Symptom Troubleshooting.

2. Compare against a known-good vehicle:
   - 1. Go to a known-good vehicle of the same year/model/trim, and using the same volume settings, compare the voice prompts.

   Are the voice prompt volume and the clarity the same as the customer's vehicle?

   YES : The HFL is OK.

   NO : Go to step 3.

3. DTC check:
   - 1. **CHECK FOR HFL DTCS**.

   Are there any HFL DTCs indicated?

   YES : Go to indicated DTC's troubleshooting.

   NO : Go to step 4.

4. Problem verification 1:
   - 1. Make sure the HFL is adjusted to a comfortable volume, note the volume level, then do **THE HFL SELF- DIAGNOSTIC FUNCTION**.

GETtheMANUALS.org

Do You hear the prompt, "The HFT is OK." or "The HFT is NG"?

YES : Go to step 5.

NO : The failure is duplicated, go to step 8.

5. Problem verification 2:
   - 1. Go to a known-good vehicle (same model/year/trim) and set the HFL volume to the level noted in step 4, then do the **HFL SELF-DIAGNOSTIC FUNCTION**.

Is the volume and clarity the same as the customer's vehicle?

YES : The HFL is OK.

NO : The failure is duplicated, go to step 6.

6. Problem verification 3:
   - 1. Turn on the audio system, and select audio source (AM/FM or CD).
   - 2. **DO THE HFL SELF-DIAGNOSTIC FUNCTION**.

Does the audio system mute when HFL message is being played?

YES : Intermittent failure, the system is OK at this time.

NO : The failure is duplicated, go to step 7.

7. Audio-navigation unit check:
   - 1. SUBSTITUTE A KNOWN-GOOD STEREO AMPLIFIER , and recheck.

Does the symptom go away?

YES : Replace the original stereo amplifier.

NO : REPLACE THE AUDIO-NAVIGATION UNIT .

8. Shorted wire check (TELEM SIG+ line, TELEM SIG- line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connectors.

     HandsFreeLink control unit 32P connector

     Audio-navigation unit connector E (16P)

   - 3. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

GETtheMANUALS.org

HandsFreeLink control unit 32P connector: disconnected

Audio-navigation unit connector E (16P): disconnected

Test circuit TELEM SIG+

Test point 1 HandsFreeLink control unit 32P connector No. 4 (BRN)

Test point 2 Body ground

Test circuit TELEM SIG-

Test point 1 HandsFreeLink control unit 32P connector No. 20 (YEL)

Test point 2 Body ground

Fig. 89: Checking Continuity Between Handsfreelink Control Unit 32P Connector No. 4, 20 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : There is a short to body ground in the wire(s) between the HandsFreeLink control unit and the audio-navigation unit. Replace the affected shielded harness.

NO : The TELEM SIG+ and the TELEM SIG- wires are not shorted to ground. Go to step 9.

9. Shorted wire check (TELEM SIG+ line to another lines):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     HandsFreeLink control unit 32P connector: disconnected

GETtheMANUALS.org

Test point 1 Audio-navigation unit connector E (16P) No. 13 (YEL)

Test point 2 HandsFreeLink control unit 32P connector No. 20 (YEL)

Fig. 91: Checking Continuity Between Audio-Navigation Unit Connector E (16P) No. 5 And Handsfreelink Control Unit 32P Connector No. 4
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The TELEM SIG+ and the TELEM SIG- wires are OK. Go to step 11.

NO : There is an open in the wire(s) between the HandsFreeLink control unit and the audio-navigation unit. Replace the affected shielded harness.

11. Audio-navigation unit check:
    - 1. SUBSTITUTE A KNOWN-GOOD AUDIO-NAVIGATION UNIT , and recheck.

Does the symptom go away?

YES : Replace the original audio-navigation unit.

NO : **Replace the HandsFreeLink control unit** See **HANDSFREELINK CONTROL UNIT REMOVAL AND INSTALLATION** or **HANDSFREELINK CONTROL UNIT UPDATE**.

THE HFL PROMPTS CANNOT BE HEARD OR ARE WEAK (HFL INFORMATION DISPLAY IS NORMAL)

GETtheMANUALS.org

HandsFreeLink System Symptom Troubleshooting - The HFL prompts cannot be heard or are weak (HFL information display is normal)

Fig. 92: Handsfreelink System Symptom Troubleshooting Flow Chart (HFL Information Display Is Normal)

Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

NOTE:

- **<u>CHECK THE VEHICLE BATTERY CONDITION FIRST</u> .**
- **The HFL volume affects both the prompts and the incoming calls. For example, if you turn down the volume during an incoming call, you also turn down the volume on the HFL prompts. Customers may turn down the volume because a call is loud, not realizing they turned down the HFL prompt volume.**
- **Check the connectors for poor connections or loose terminals.**

1. Determine possible failure area (audio system, HFL system):
   - 1. Turn the ignition switch to ON (II).
   - 2. Check that the audio system is operating normally, from different audio sources (AM/FM and CD) and the speaker sound levels are normal.

   Does the audio system work normally, and is the audio output from the speaker normal when playing various audio sources?

   YES : Go to step 2.

   NO : Refer to the audio system Symptom Troubleshooting.

2. Compare against a known-good vehicle:
   - 1. Go to a known-good vehicle of the same year/model/trim, and using the same volume settings, compare the voice prompts.

   Are the voice prompt volume and the clarity the same as the customer's vehicle?

   YES : The HFL is OK.

   NO : Go to step 3.

3. DTC check:
   - 1. **<u>CHECK FOR HFL DTCS</u>**.

   Are there any HFL DTCs indicated?

   YES : Go to indicated DTC's troubleshooting.

   NO : Go to step 4.

4. Problem verification 1:
   - 1. Make sure the HFL is adjusted to a comfortable volume, note the volume level, then do **<u>THE HFL SELF- DIAGNOSTIC FUNCTION</u>**.

   Do You hear the prompt, "The HFT is OK." or "The HFT is NG"?

GETtheMANUALS.org

YES : Go to step 5.

NO : The failure is duplicated, go to step 7.

5. Problem verification 2:
    - 1. Turn on the audio unit, and select audio source (AM/FM or CD).
    - 2. **DO THE HFL SELF-DIAGNOSTIC FUNCTION**.

Does the audio system mute when HFL message is being played?

YES : Intermittent failure, the system is OK at this time.

NO : The failure is duplicated, go to step 6.

NO : REPLACE THE AUDIO UNIT .

6. Audio unit check:
    - 1. SUBSTITUTE A KNOWN-GOOD STEREO AMPLIFIER , and recheck.

Does the symptom go away?

YES : Replace the original stereo amplifier.

NO : REPLACE THE AUDIO UNIT .

7. Shorted wire check (TELEM SIG+ line, TELEM SIG- line):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Disconnect the following connectors.

      HandsFreeLink control unit 32P connector

      Audio unit connector B (20P)

    - 3. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      HandsFreeLink control unit 32P connector: disconnected

      Audio unit connector B (20P): disconnected

      Test circuit TELEM SIG+

      Test point 1 HandsFreeLink control unit 32P connector No. 4 (BRN)

      Test point 2 Body ground

GETtheMANUALS.org

Test circuit TELEM SIG-

Test point 1 HandsFreeLink control unit 32P connector No. 20 (YEL)

Test point 2 Body ground

Fig. 93: Checking Continuity Between Handsfreelink Control Unit 32P Connector No. 4, 20 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : There is a short to body ground in the wire(s) between the HandsFreeLink control unit and the audio unit. Replace the affected shielded harness.

NO : The TELEM SIG+ and the TELEM SIG wires are not shorted to ground. Go to step 8.

8. Shorted wire check (TELEM SIG+ line to another lines):
   1. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      HandsFreeLink control unit 32P connector: disconnected

      Audio unit connector B (20P): disconnected

      Test circuit TELEM SIG+, SH TELEM SIG

      Test point 1 HandsFreeLink control unit 32P connector No. 4 (BRN)

      Test point 2 HandsFreeLink control unit 32P connector No. 19 (GRY)

      Test circuit TELEM SIG+, TELEM SIG-

      Test point 1 HandsFreeLink control unit 32P connector No. 4 (BRN)

      Test point 2 HandsFreeLink control unit 32P connector No. 20 (YEL)

GETtheMANUALS.org

Fig. 94: Checking Continuity Between Handsfreelink Control Unit 32P Connector No. 4 And 19, 20
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : There is a short in the wires between the HandsFreeLink control unit and the audio unit. Replace the affected shielded harness.

NO : The TELEM SIG+ wire is not shorted in the wires. Go to step 9.

9. Open wire check (TELEM SIG+ line, TELEM SIG- line):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     HandsFreeLink control unit 32P connector: disconnected

     Audio unit connector B (20P): disconnected

     Test circuit TELEM SIG-

     Test point 1 Audio unit connector B (20P) No. 2 (YEL)

     Test point 2 HandsFreeLink control unit 32P connector No. 20 (YEL)

     Test circuit TELEM SIG+

     Test point 1 Audio unit connector B (20P) No. 12 (BRN)

     Test point 2 HandsFreeLink control unit 32P connector No. 4 (BRN)

GETtheMANUALS.org

Fig. 95: Checking Continuity Between Audio Unit Connector B (20P) No. 2 And Handsfreelink Control Unit 32P Connector No. 20
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The TELEM SIG+ and the TELEM SIG- wires are OK. Go to step 10.

NO : There is an open in the wire(s) between the HandsFreeLink control unit and the audio unit. Replace the affected shielded harness.

10. Audio unit check:
    - 1. SUBSTITUTE A KNOWN-GOOD AUDIO UNIT , and recheck.

Does the symptom go away?

YES : Replace the original audio unit.

NO : **Replace the HandsFreeLink control unit** See **HANDSFREELINK CONTROL UNIT REMOVAL AND INSTALLATION** or **HANDSFREELINK CONTROL UNIT UPDATE**.

HFL SYSTEM TROUBLESHOOTING

GETtheMANUALS.org

HandsFreeLink System Troubleshooting

Fig. 96: Handsfreelink System Troubleshooting Flow Chart
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**

GETtheMANUALS.org

- **<u>BEFORE YOU TROUBLESHOOT, MAKE SURE TO FOLLOW THE HOW TO TROUBLESHOOT THE HANDSFREELINK SYSTEM</u>.**
- **Make sure the cell phone with Bluetooth is Honda approved and configured correctly. Online, go to handsfreelink.honda.com, or call the HFL customer service at 888-528-7876.**
- **You must be able to duplicate the customer's concern to successfully diagnose the problem. If you cannot duplicate the issue, have the customer demonstrate it.**
- **Once the symptom is duplicated, contact the HFL support desk at 888-528-7876. Many HFL issues are related to the cell phone and not the HFL system.**
- **See if you can duplicate the symptom in a known-good vehicle under the same conditions. If you can, it is probably a characteristic of the system.**
- **Always use the customer's cell phone to successfully diagnose the problem.**

1. Determine possible failure area (cell phone with Bluetooth, others) 1:
   - 1. Make sure the cell phone with Bluetooth is approved by checking handsfreelink.honda.com, or call the HFL customer service at 888-528-7876.

   Is the cell phone with Bluetooth approved?

   YES : Go to step 2.

   NO : Explain to the customer that the cell phone with Bluetooth is not approved or configured correctly. Recommend they contact the HFL support desk at 888-528-7876 to discuss approved phones and configuration issues. Go to handsfreelink.honda.com for a list of approved cell phones with Bluetooth.

2. Determine possible failure area (cell phone with Bluetooth, others) 2:
   - 1. Check if the cell phone with Bluetooth has any special requirements (software version, configuration, etc.). Call the HFL customer service at 888-528-7876 for help.

   Is the correct software version loaded and is the cell phone with Bluetooth properly configured?

   YES : Go to step 3.

   NO : Explain to your customer that the cell phone with Bluetooth software needs to be updated or the cell phone with Bluetooth needs to be configured properly. Recommend they contact the HFL support desk at 888-528-7876 to discuss approved phones and configuration issues.

3. Determine possible failure area (cell phone with Bluetooth, others) 3:
   - 1. Check the features of the approved cell phone with Bluetooth at handsfreelink.honda.com, or call the HFL customer service at 888-528-7876.

   Are all the features approved?

GETtheMANUALS.org

YES : Go to step 4.

NO : Check and see if the phone's feature that is not approved is the same as the customer complaint. If the complaint is about the feature that is not approved, the vehicle is OK. Explain to the customer that the feature is not approved to work with the HFL. Recommend they contact the HFL support desk at 888-528-7876 to discuss approved phones and configuration issues.

4. DTC check:
   - 1. **CHECK FOR HFL DTCS**.

Are there any HFL DTCs indicated?

YES : Go to indicated DTC's troubleshooting.

NO : Go to step 5.

5. Problem verification:
   - 1. Try to duplicate the problem or have the customer demonstrate the problem.

Can you duplicate the problem?

YES : The failure is duplicated, go to step 6.

NO : Intermittent failure, the system is OK at this time. Most HFL concerns are related to the phone or how the customer is using the HFL system. Recommend they contact the HFL support desk at 888-528-7876 to discuss possible phone and configuration issues.

6. HandsFreeLink control unit check:
   - 1. Pair the approved cell phone with Bluetooth to a known-good vehicle (same model, year, and trim), and try duplicate the problem.

Does the cell phone with Bluetooth have the same problem on the known-good vehicle?

YES : Call the HFL customer service at 888-528-7876, not tech line, to make sure the approved cell phone with Bluetooth is configured correctly and has the correct software. If the cell phone with Bluetooth is configured correctly, it is either a characteristic of the HFL system, or a characteristic of the particular approved cell phone with Bluetooth being used. Explain to your customer that this is a system characteristic. Another cell phone from the approved cell phone with Bluetooth list may give more favorable results.

NO : **Update the HandsFreeLink control unit** See **HANDSFREELINK CONTROL UNIT REMOVAL AND INSTALLATION** or **HANDSFREELINK CONTROL UNIT UPDATE** if it does not have the latest software, or **substitute a known-good HandsFreeLink control unit** See **HANDSFREELINK CONTROL UNIT REMOVAL AND INSTALLATION** or **HANDSFREELINK CONTROL UNIT UPDATE**, and recheck.

NO : **Replace the HandsFreeLink control unit** See **HANDSFREELINK CONTROL UNIT**

GETtheMANUALS.org

REMOVAL AND INSTALLATION or **HANDSFREELINK CONTROL UNIT UPDATE**.

HFL SWITCH REMOVAL, INSTALLATION, AND TEST

REMOVAL

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

1. Battery Terminal (SRS) - Disconnection
    1. Make sure the ignition switch is in LOCK (0).
    2. Disconnect and isolate the negative cable (A) from the battery.

    NOTE: Always disconnect the negative side first.

    3. Disconnect the positive cable (B) from the battery.
    4. Wait at least 3 minutes before starting work.

Fig. 97: Identifying Battery Positive And Negative Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Driver's Airbag
    1. Remove the access panel (A).
    2. Disconnect the driver's airbag inflator connector (B) on the cable reel harness.
    3. Disconnect the horn switch connector (C).

GETtheMANUALS.org

Fig. 98: Identifying Access Panel, Driver's Airbag Inflator Connector And Horn Switch Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the TORX bolts using a TORX T30 bit.
5. Remove the driver's airbag (A).

Fig. 99: Identifying Driver's Airbag
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Steering Wheel Assembly
    1. Set the front wheels in the straight ahead position.
    2. Disconnect the connector (A).

GETtheMANUALS.org

3. Loosen the steering wheel bolt (B) three turns.

Fig. 100: Identifying Steering Wheel Connector And Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install a commercially available steering wheel puller (A) on the steering wheel (B).
5. Free the steering wheel from the steering column shaft by turning the pressure bolt (C) of the puller.

   Note these items when removing the steering wheel:

   - Do not tap on the steering wheel or the steering column shaft when removing the steering wheel.
   - If you thread the puller bolts (D) into the wheel hub more than five threads, the bolts will hit the cable reel and damage it. To prevent this, install a pair of jam nuts five threads up on each puller bolt.

GETtheMANUALS.org

Fig. 101: Turning Steering Wheel Puller Pressure Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the steering wheel puller.
7. Remove the steering wheel (A) from the steering column.

Fig. 102: Identifying Steering Wheel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. HFL Switch
    1. Remove the cover (A).
    2. Remove the HFL switch (B).

GETtheMANUALS.org

Fig. 103: Identifying HFL Switch And Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TEST

1. HFL Switch - Test
    1. Measure resistance between terminals No. 3 and No. 5 in each switch position according to the table.

    HFL SWITCH

Position	Resistance
No button pressed	About 10 kohms
HANG-UP button pressed	About 47 ohms
PICK-UP button pressed	About 222 ohms

    2. If the resistance is not as specified, replace the HFL switch.

GETtheMANUALS.org

Fig. 104: Identifying HFL Switch Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

1. HFL Switch
    1. Install the HFL switch (A).
    2. Install the cover (B).

Fig. 105: Identifying HFL Switch And Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

2. Steering Wheel Assembly
    1. Make sure the front wheels are pointing straight ahead.
    2. Center the cable reel (A). Do this by first rotating the cable reel clockwise until it stops.
    3. Rotate the cable reel counterclockwise about three full turns. The arrow mark (B) on the cable reel label should point straight up.

Fig. 106: Identifying Cable Reel With Arrow Mark
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    4. Position the steering wheel hub (A) so that it engages the pin (B) of the cable reel.
    5. Install the steering wheel (C) on to the steering column shaft.

NOTE: **Do not tap on the steering wheel or the steering column shaft when installing the steering wheel.**

Fig. 107: Identifying Steering Wheel, Hub And Pin

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the steering wheel bolt (A), and tighten it to the specified torque.
7. Connect the connector (B).
8. Make sure the wire harness is routed and fastened properly.

Fig. 108: Identifying Steering Wheel Connector And Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Driver's Airbag

NOTE: If you are replacing a deployed driver's airbag, inspect the cable reel for heat damage. If there is any damage, replace the cable reel.

1. Place the driver's airbag (A) in the steering wheel.
2. Tighten the new TORX bolts using a TORX T30 bit.

NOTE: Make sure the clearance (B) between the steering wheel and the horn pad is the specified value.

GETtheMANUALS.org

Fig. 109: Identifying Driver's Airbag And Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 110: Identifying Clearance Between Steering Wheel And Horn Pad
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Connect the driver's airbag inflator connector (A) on the cable reel harness.
4. Connect the horn switch connector (B).

NOTE: **After reconnecting the negative cable to the battery, make sure the horn works properly.**

GETtheMANUALS.org

Fig. 111: Identifying Access Panel, Driver's Airbag Inflator Connector And Horn Switch Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the access panel (C).

4. Battery Terminal (SRS) - Reconnection

NOTE: If the battery performance is abnormal, test the battery.

1. Clean the battery terminals.
2. Connect the positive cable (A) to the battery.

NOTE: Always connect the positive side first.

3. Connect the negative cable (B) to the battery.
4. Apply multipurpose grease to the terminals to prevent corrosion.

GETtheMANUALS.org

Fig. 112: Identifying Battery Positive And Negative Terminals, Mounting Bolts Ad Nuts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Steering Wheel Spoke Angle - Check
    1. Check the steering wheel spoke angle.
    2. If steering spoke angles to the right and left are not equal (steering wheel is not centered), correct the engagement of the wheel/column shaft splines.
6. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

GETtheMANUALS.org

Fig. 113: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. VSA Sensor Neutral Position - Memorization
    1. Park the vehicle on a flat and level surface, with the steering wheel in the straight ahead position.
    2. Select VSA ADJUSTMENT, then select ALL SENSORS with the HDS, and follow the screen prompts.

    NOTE: See the HDS Help menu for specific instructions.

8. Steering Angle Sensor Neutral Position - Clear
    1. Select EPS ADJUSTMENT, then select EPS STEERING ANGLE SENSOR VALUE CLEAR and follow the screen prompts on the HDS.

    NOTE: See the HDS Help menu for specific instructions.

WIRELESS HEADPHONE BATTERY REMOVAL AND INSTALLATION

REMOVAL

1. Wireless Headphone Battery
    1. Use a small coin to open the battery cover (A), and remove the battery (B).

Fig. 124: Removing Wireless Headphone Battery
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

INSTALLATION

1. Wireless Headphone Battery
    1. Install a new battery, then close the battery cover.

Fig. 125: Installing Wireless Headphone Battery
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Turn the left earpiece (A) to ON, and confirm that the indicator (B) comes on after the battery is replaced.

Fig. 126: Turning Wireless Headphone Battery Left Earpiece
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

HOOD ADJUSTMENT

REMOVAL

1. Left Windshield Wiper Arm Assembly

NOTE: Set the windshield wiper arms to the auto-stop position before removal.

1. Remove the wiper arm cap (A).
2. Remove the nut (B), then remove the left wiper arm (C).

Fig. 1: Identifying Left Wiper Arm, Wiper Arm Cap And Nut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Fender Trim - Both Sides

NOTE: Repeat on the opposite side.

1. Remove the clips (A, B).
2. Pull up the front fender trim (C) by hand to detach the clips (D), then remove the trim.

GETtheMANUALS.org

Fig. 2: Identifying Front Fender Trim Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Cowl Top Cover - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Remove the clip (A).
2. Pull out the hood rear seal (B).
3. Detach the hooks, and remove the cowl top cover (C).

GETtheMANUALS.org

Fig. 3: Identifying Cowl Top Cover, Hood Rear Seal And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Side Cowl Cover - Both Sides

NOTE: Repeat on the opposite side.

1. Detach the hook (A) at the inside of the cowl cover (B).
2. Release the hooks (C) from the cowl cover and the front fender (D), then remove the side cowl cover (E).
3. Right side; Detach the windshield washer tube.

GETtheMANUALS.org

Fig. 4: Removing Side Cowl Cover Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

ADJUSTMENT

1. Hood - Adjustment
    1. Slightly loosen each bolt (A).

GETtheMANUALS.org

Fig. 5: Adjusting Hood
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Adjust the hood (B) alignment in the following sequence:
   - Adjust the hood right and left, as well as forward and rearward, by using the elongated holes in the hood hinges (C).
   - Turn the hood edge cushions (D), in or out as necessary, to make the hood fits flush with the body at the front and the side edges.
3. Adjust the latch (E) to obtain the proper height at the forward edge, and move the latch right or left until the striker (F) is centered in the latch.
4. Tighten each bolt to the specified torque.
5. Make sure the hood opens properly and locks securely.
6. Apply touch-up paint to the hinge mounting bolts and around the hinges, and let the paint dry.
7. Apply multipurpose grease to the hood latch and the hood hinges as indicated by the arrows.

GETtheMANUALS.org

Fig. 6: Identifying Multipurpose Grease Applying Area On Hood Hinges
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 7: Identifying Multipurpose Grease Applying Area On Hood Latch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Side Cowl Cover - Both Sides

NOTE: Repeat on the opposite side.

1. Install the side cowl cover (A). Make sure the hooks (B) snap into place securely.
2. Right side; Install the windshield washer tube.

GETtheMANUALS.org

Fig. 8: Identifying Side Cowl Cover And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Cowl Top Cover - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Install the cowl top cover (A).
2. Install the hood rear seal (B).
3. Install the clip (C).

GETtheMANUALS.org

Fig. 9: Identifying Cowl Top Cover, Hood Rear Seal And Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Fender Trim - Both Sides

NOTE: Repeat on the opposite side.

1. Install the front fender trim (A), then install the clips (B, C). Make sure the clips (D) snap into place securely.

GETtheMANUALS.org

Fig. 10: Identifying Front Fender Trim Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Left Windshield Wiper Arm Assembly

NOTE: Set the wiper arms to the auto-stop position before installation.

1. Install the wiper arm (A), the nut (B), and the cap (C).

Fig. 11: Identifying Wiper Arm, Cap And Nut With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Windshield Wiper Arm - Adjustment
   1. **Adjust the windshield wiper arms** See **WIPER ARM REMOVAL AND INSTALLATION** or **WIPER ARM/NOZZLE ADJUSTMENT** .

HOOD OPENER CABLE	**REMOVAL AND INSTALLATION**
HOOD SEAL	**REMOVAL AND INSTALLATION**

HOOD INSULATOR REMOVAL AND INSTALLATION

REMOVAL

1. Hood Insulator
    1. Detach the clips (A) with a clip remover. Remove the hood insulator (B) by pulling it away from the hooks (C).

GETtheMANUALS.org

Fig. 13: Identifying Hood Insulator And Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Hood Insulator
    1. Install the hood insulator (A). Make sure the clips (B) and the hooks (C) snap into place securely.

Fig. 14: Identifying Hood Insulator And Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

HOOD LATCH REMOVAL AND INSTALLATION

REMOVAL

1. Hood Latch
    1. Remove the bolts (A), then remove the hood latch (B) from the body. Disconnect the hood opener cable (C) from the latch.
    2. Disconnect the connector (D).

Fig. 15: Disconnecting Hood Opener Cable From Latch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Hood Latch

NOTE: **Apply multipurpose grease to the hood latch as indicated by the arrows.**

GETtheMANUALS.org

Fig. 16: Identifying Multipurpose Grease Applying Area On Hood Latch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. Connect the connector (A).
2. Connect the hood opener cable (B).
3. Install the hood latch (C), then install the bolts (D).

Fig. 17: Installing Hood Latch And Fasteners With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Hood Latch - Adjustment
    1. Slightly loosen the hood latch mounting bolts (A).

GETtheMANUALS.org

Fig. 18: Adjusting Hood Latch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Adjust the hood latch (B) to obtain the proper height at the forward edge, and move the hood latch right or left until the striker (C) is centered in the hood latch.
3. Tighten the hood latch mounting bolts to the specified torque.
4. Make sure the hood opens properly and locks securely.
5. Apply multipurpose grease to the hood latch as indicated by the arrows.

HOOD OPENER CABLE REMOVAL AND INSTALLATION

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Front Wheel

GETtheMANUALS.org

1. Remove the front wheel.

Fig. 20: Identifying Front Wheel And Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Splash Guard
    1. For some models: Remove the screws (A), then remove the front splash guard (B).

Fig. 21: Identifying Front Splash Guard And Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Inner Fender
    1. Remove the bolt (A), the screws (B), and the clips (C, D, and E) securing the front inner fender (F),

GETtheMANUALS.org

then remove the front inner fender.

Fig. 22: Identifying Front Inner Fender And Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Front Door Sill Trim
    1. Detach the hooks (A) and the tabs (B) from the kick panel (C) and the B-pillar lower trim (D), and pull up the front door inner sill trim (E) by hand to detach the clips (F), then remove the trim.

GETtheMANUALS.org

Fig. 23: Identifying Front Door Sill Trim And Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Front Door Opening Seal As Needed
    1. Pull out the front door opening seal (A) from the trim hooks (B) around the front door opening flange as needed.

Fig. 24: Pulling Out Front Door Opening Seal From Trim Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Kick Panel
    1. Pull out the front door opening seal (A) as needed from the kick panel hooks and the door opening flange.

GETtheMANUALS.org

2. Pull back the kick panel by hand to detach the clips (B), then remove the driver's side kick panel (C).

Fig. 25: Removing Driver's Side Kick Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Hood Latch
    1. Remove the bolts (A), then remove the hood latch (B) from the body. Disconnect the hood opener cable (C) from the latch.
    2. Disconnect the connector (D).

GETtheMANUALS.org

Fig. 26: Disconnecting Hood Opener Cable From Latch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Hood Opener Cable
    1. Detach the clips (A) with a clip remover, and remove the grommet (B) from the body.

Fig. 27: Identifying Hood Opener Cable Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the bolt (A), then remove the hood release handle/cable (B).
    3. Disconnect the hood opener cable (C) from the hood release handle (D).

GETtheMANUALS.org

Fig. 28: Disconnecting Hood Opener Cable From Hood Release Handle
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Hood Opener Cable
    1. Connect the hood opener cable (A) to the hood release handle (B).
    2. Install the hood release handle/cable (C), then install the bolt (D).

GETtheMANUALS.org

Fig. 29: Installing Hood Opener Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the clips (A) securing the hood opener cable (B), and install the grommet (C) to the body.

GETtheMANUALS.org

Fig. 30: Identifying Hood Opener Cable And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Hood Latch

NOTE: **Apply multipurpose grease to the hood latch as indicated by the arrows.**

GETtheMANUALS.org

Fig. 31: Identifying Multipurpose Grease Applying Area On Hood Latch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. Connect the connector (A).
2. Connect the hood opener cable (B).
3. Install the hood latch (C), then install the bolts (D).

Fig. 32: Installing Hood Opener Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Hood Latch - Adjustment
    1. Slightly loosen the hood latch mounting bolts (A).

GETtheMANUALS.org

Fig. 33: Adjusting Hood Latch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Adjust the hood latch (B) to obtain the proper height at the forward edge, and move the hood latch right or left until the striker (C) is centered in the hood latch.
3. Tighten the hood latch mounting bolts to the specified torque.
4. Make sure the hood opens properly and locks securely.
5. Apply multipurpose grease to the hood latch as indicated by the arrows.

Fig. 34: Identifying Multipurpose Grease Applying Area On Hood Latch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Kick Panel
    1. Install the driver's side kick panel (A). Make sure the clips (B) snap into place securely.
    2. Install the front door opening seal (C).

GETtheMANUALS.org

Fig. 35: Installing Driver's Side Kick Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Front Door Opening Seal As Needed
    1. Install the front door opening seal (A). Make sure the seal is installed securely into the hooks (B).

Fig. 36: Installing Front Door Opening Seal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Front Door Sill Trim
    1. Install the front door inner sill trim (A). Make sure the clips (B), the hooks (C), and the tabs (D) snap into place securely.

GETtheMANUALS.org

Fig. 37: Installing Front Door Inner Sill Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Front Inner Fender
    1. Install the front inner fender (A), then install the bolt (B), the screws (C), and the clips (D, E, and F). Make sure the clips snap into place securely.

GETtheMANUALS.org

Fig. 38: Identifying Front Inner Fender And Fasteners With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Front Splash Guard
    1. For some models: Install the front splash guard (A), then install the screws (B).

GETtheMANUALS.org

Fig. 39: Identifying Front Splash Guard And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Front Wheel
    1. Install the front wheel.

NOTE: **Before installing the wheel, clean the mating surfaces between the brake disc and the inside of the wheel.**

Fig. 40: Identifying Front Wheel And Mounting Bolt With Torque Specification

GETtheMANUALS.org

HOOD RELEASE HANDLE REMOVAL AND INSTALLATION

REMOVAL

1. Front Door Sill Trim
    1. Detach the hooks (A) and the tabs (B) from the kick panel (C) and the B-pillar lower trim (D), and pull up the front door inner sill trim (E) by hand to detach the clips (F), then remove the trim.

Fig. 41: Pulling Up Front Door Inner Sill Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Door Opening Seal As Needed
    1. Pull out the front door opening seal (A) from the trim hooks (B) around the front door opening flange as needed.

GETtheMANUALS.org

Fig. 42: Pulling Out Front Door Opening Seal From Trim Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Kick Panel
    1. Pull out the front door opening seal (A) as needed from the kick panel hooks and the door opening flange.
    2. Pull back the kick panel by hand to detach the clips (B), then remove the driver's side kick panel (C).

Fig. 43: Removing Driver's Side Kick Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Hood Release Handle

GETtheMANUALS.org

1. Remove the bolt (A), then remove the hood release handle/cable (B).
2. Disconnect the hood opener cable (C) from the hood release handle (D).

Fig. 44: Disconnecting Hood Opener Cable From Hood Release Handle
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Hood Release Handle
    1. Connect the hood opener cable (A) to the hood release handle (B).
    2. Install the hood release handle/cable (C), then install the bolt (D).

GETtheMANUALS.org

Fig. 45: Installing Hood Opener Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Kick Panel
    1. Install the driver's side kick panel (A). Make sure the clips (B) snap into place securely.
    2. Install the front door opening seal (C).

Fig. 46: Installing Driver's Side Kick Panel

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Door Opening Seal As Needed
    1. Install the front door opening seal (A). Make sure the seal is installed securely into the hooks (B).

Fig. 47: Installing Front Door Opening Seal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Door Sill Trim
    1. Install the front door inner sill trim (A). Make sure the clips (B), the hooks (C), and the tabs (D) snap into place securely.

Fig. 48: Installing Front Door Inner Sill Trim

GETtheMANUALS.org

HORN REMOVAL, INSTALLATION, AND TEST

REMOVAL

NOTE: Steps 1-3 show removing the High Horn, Steps 4-7 show removing the Low Horn.

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Front Splash Shield As Needed
    1. Remove the bolts (A), then remove the clips (B) that secure the front inner fender and the front splash shield (C) to the body.
    2. From under the front bumper (D), remove the clips (E).
    3. From under the body, remove the clips (F), then pull out the front splash shield.

Fig. 1: Identifying Front Splash Shield And Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Horn - High
    1. Disconnect the connector.

GETtheMANUALS.org

2. Remove the horn (A).

Fig. 2: Identifying Horn And Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Grille
    1. Apply protective tape (A) to the front grille lower trim (B).

GETtheMANUALS.org

Fig. 3: Disconnecting Front Grille Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the clips (C) and detach the hooks (D).
3. Insert a shop towel (A) between the front grille (B) and the front grille lower trim (C).

GETtheMANUALS.org

Fig. 4: Inserting Shop Towel Between Front Grille And Front Grille Lower Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Insert a flat-tip screwdriver (A) into the opening at the front grille (B), then turn the screwdriver to detach the clip (C).

NOTE: Repeat this procedure on the opposite side.

Fig. 5: Disconnecting Front Grille Clips Using Flat-Tip Screwdriver
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the front grille (A).

GETtheMANUALS.org

Fig. 6: Removing Front Grille
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Front Bumper Upper Duct
    1. Remove the clips (A), then remove the front bumper upper duct (B).

Fig. 7: Identifying Front Bumper Upper Duct Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Horn and Bracket Assembly
    1. Disconnect the connector.
    2. Remove the horn (A) and the bracket (B) as an assembly.

GETtheMANUALS.org

Fig. 8: Identifying Horn And Bracket Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Horn - Low
    1. Remove the horn (A) from the bracket (B).

Fig. 9: Identifying Horn And Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TEST

1. Horn - Test
    1. Test the horn by momentarily connecting battery power to the terminal (A) and grounding the bracket (B). The horn should sound.
    2. If it fails to sound, replace the horn (C).

GETtheMANUALS.org

Fig. 10: Identifying Horn, Bracket And Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

NOTE: **Steps 1-4 show installing the Low Horn, Steps 5- 6 show installing the High Horn.**

1. Horn - Low
    1. Install the horn (A) to the bracket (B).

Fig. 11: Identifying Horn, Bracket And Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Horn and Bracket Assembly
    1. Install the horn (A) and the bracket (B) as an assembly.
    2. Connect the connector.

GETtheMANUALS.org

Fig. 12: Identifying Horn And Bracket Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Bumper Upper Duct
    1. Install the front bumper upper duct (A). Make sure the clips (B) snap into place securely.

Fig. 13: Identifying Front Bumper Upper Duct And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Grille
    1. Install the front grille (A) by pushing on the clip areas until the clips snap into place.
    2. Install the clips (B).

GETtheMANUALS.org

Fig. 14: Installing Front Grille
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Horn - High
    1. Install the horn (A).
    2. Connect the connector.

Fig. 15: Identifying Horn
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Front Splash Shield (2.4L) As Needed
    1. Install the front splash shield (A), then install the bolts (B) and the clips (C, D). Make sure the clips snap into place securely.

GETtheMANUALS.org

HORNS COMPONENT LOCATION INDEX

GETtheMANUALS.org

Fig. 17: Horn Components Location
Courtesy of AMERICAN HONDA MOTOR CO., INC.

CABLE REEL	**REMOVAL AND INSTALLATION**
HORN (HIGH)	**REMOVAL, INSTALLATION, AND TEST**
HORN (LOW)	**REMOVAL, INSTALLATION, AND TEST**
HORN RELAY (4P)	**TEST**
HORN SWITCH	**TEST**

HORN SWITCH TEST

NOTE:

- **SRS components are located in this area. Review the SRS COMPONENT LOCATIONS , and PRECAUTIONS AND PROCEDURES before performing repairs or servicing.**

GETtheMANUALS.org

- **Before testing, make sure the No. A14 (10 A) fuse in the under-hood fuse/relay box is OK.**

1. Turn the steering wheel 180° from the center position and remove the cover.
2. Disconnect the horn switch 1P connector.
3. Connect horn switch 1P connector terminal No. 1 and body ground with a jumper wire.

Fig. 18: Connecting Horn Switch 1P Connector Terminal No. 1 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- If the horns do not sound, go to step **4** .
- If the horns sound, go to step 11.

4. Remove the jumper wire from the horn switch 1P connector.
5. **REMOVE THE DRIVER'S AIRBAG ASSEMBLY** .
6. Disconnect cable reel connector C (20P) from the cable reel.
7. Check for continuity between cable reel connector C (20P) terminal No. 14 and horn switch 1P connector terminal No. 1.

Fig. 19: Checking Continuity Between Cable Reel Connector C (20P) Terminal No. 14 And Horn Switch 1P Connector Terminal No. 1
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

- If there is continuity, go to step **8** .
- If there is no continuity, repair an open or high resistance in the wire.

8. **REMOVE THE STEERING COLUMN COVERS** .
9. Disconnect cable reel connector A (20P).
10. Connect cable reel connector A (20P) terminal No. 2 and body ground with a jumper wire.

Fig. 20: Connecting Cable Reel Connector A (20P) Terminal No. 2 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- If the horns sound, **REPLACE THE CABLE REEL** .
- If the horns do not sound, check these items.
  - Horns.
  - Horn relay.
  - An open or high resistance in the wire.
- If OK, the MICU must be faulty. **REPLACE THE UNDER-DASH FUSE/RELAY BOX** .

11. **REMOVE THE DRIVER'S AIRBAG ASSEMBLY** .
12. Check the installation of the driver's airbag assembly and the steering wheel. If the horn switch plate is OK, **REPLACE THE DRIVER'S AIRBAG ASSEMBLY** .

GETtheMANUALS.org

DTC INDICATOR 1: AN OPEN IN THE AIR MIX CONTROL MOTOR CIRCUIT

Fig. 1: HVAC DTC Troubleshooting Flow Chart (1)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. Problem verification:
   - 1. Turn the ignition switch to LOCK (0), and then back to ON (II).
   - 2. **DO THE SELF-DIAGNOSTIC FUNCTION WITH THE HVAC CONTROL UNIT** .
   - 3. Check for DTCs.

     Is DTC 1 indicated?

     YES : Go to step 2.

     NO : Intermittent failure. Check for loose wires or poor connections on the air mix control motor circuit.

2. Open wire check (AMD P DR/AMD-P, SENSOR 5V/S5V, SENSOR COM/SENS-COM lines):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connectors.

GETtheMANUALS.org

HVAC control unit 32P connector

Air mix control motor 7P connector

- 3. Check for continuity between test points 1 and 2 respectively.

Test condition IG LOCK (0)

HVAC control unit 32P connector: disconnected

Air mix control motor 7P connector: disconnected

Test circuit AMD P DR/AMD-P

Test point 1 HVAC control unit 32P connector No. 22 (LT GRN)

Test point 2 Air mix control motor 7P connector No. 2 (GRY)

Test circuit SENSOR 5V/S5V

Test point 1 HVAC control unit 32P connector No. 17 (LT BLU)

Test point 2 Air mix control motor 7P connector No. 3 (BLK)

Test circuit SENSOR COM/SENS-COM

Test point 1 HVAC control unit 32P connector No. 20 (GRY)

Test point 2 Air mix control motor 7P connector No. 1 (RED)

Fig. 2: Checking Continuity Between HVAC Control Unit 32P Connector And Air Mix

GETtheMANUALS.org

Control Motor 7P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The AMD P DR/AMD-P, SENSOR 5V/S5V, and SENSOR COM/SENS-COM wires are OK. Go to step 3.

NO : Repair an open in the wire(s) between the HVAC control unit and the air mix control motor.

3. Air mix control motor check:
   - 1. **Test the air mix control motor** See **AIR MIX CONTROL MOTOR TEST** , **DRIVER'S AIR MIX CONTROL MOTOR TEST** or **PASSENGER'S AIR MIX CONTROL MOTOR TEST** .

     Is the air mix control motor OK?

     YES : **REPLACE THE HVAC CONTROL UNIT** .

     NO : **Replace the air mix control motor** See **AIR MIX CONTROL MOTOR REMOVAL AND INSTALLATION** , **DRIVER'S AIR MIX CONTROL MOTOR REMOVAL AND INSTALLATION** or **PASSENGER'S AIR MIX CONTROL MOTOR REMOVAL AND INSTALLATION** .

DTC INDICATOR 10: A PROBLEM IN THE BLOWER MOTOR CIRCUIT

GETtheMANUALS.org

Fig. 3: HVAC DTC Troubleshooting Flow Chart (10)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. Problem verification:
    - 1. Turn the ignition switch to LOCK (0), and then back to ON (II).

GETtheMANUALS.org

- 2. **DO THE SELF-DIAGNOSTIC FUNCTION WITH THE HVAC CONTROL UNIT** .
- 3. Check for DTCs.

  Is DTC 10 indicated?

  YES : Go to step 2.

  NO : Intermittent failure. Check for loose wires or poor connections on the blower motor circuit.

2. Fuse check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check the following fuses.

     Fuse No. A2-8 (40 A)

     Location Under dash fuse/relay box

     Fuse No. B22 (7.5A)

     Location Under dash fuse/relay box

     Are the fuses OK?

     YES : Go to step 3.

     NO : Replace the fuse, and recheck. If fuse blows again, check for a short in the No. A2-8 (40 A) and or No. B22 (7.5A)fuse circuits.

3. Blower motor power circuit check:
   - 1. Disconnect the following connector.

     Blower motor 2P connector

   - 2. Turn the ignition switch to ON (II).
   - 3. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     Blower motor 2P connector: disconnected

     Test circuit BLW-RLY

     Test point 1 Blower motor 2P connector No. 2 (WHT)

     Test point 2 Body ground

GETtheMANUALS.org

Fig. 4: Measuring Voltage Between Blower Motor 2P Connector No. 2 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : Go to step 4.

NO : Go to step 10.

4. Blower motor operation check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Reconnect the blower motor 2P connector.
   - 3. Connect terminals A and B with a jumper wire.

     Terminal A Blower motor 2P connector No. 1 (GRN)

     Terminal B Body ground

Fig. 5: Connecting Blower Motor 2P Connector Terminal No. 1 And Body Ground Using Jumper Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

   - 4. Turn the ignition switch to ON (II).

     Does the blower motor run?

GETtheMANUALS.org

YES : Go to step 5.

NO : **REPLACE THE BLOWER MOTOR** .

5. Open wire check (GND line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the jumper wire.
   - 3. Disconnect the following connector.

     Power transistor 4P connector

   - 4. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Power transistor 4P connector: disconnected

     Test circuit GND

     Test point 1 Power transistor 4P connector No. 3 (BLK)

     Test point 2 Body ground

Fig. 6: Checking Continuity Between Power Transistor 4P Connector No. 3 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The GND wire is OK. Go to step 6.

NO : Check for an open in the wire between the power transistor and body ground. If the wire is OK, check for poor ground at G402.

6. Open wire check (BLW-M line):

GETtheMANUALS.org

- 1. Connect terminals A and B with a jumper wire.

  Terminal A Power transistor 4P connector No. 3 (BLK)

  Terminal B Power transistor 4P connector No. 4 (GRN)

  Fig. 7: Connecting Power Transistor 4P Connector No. 3 And 4 Terminals Using Jumper Wire
  Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 2. Turn the ignition switch to ON (II).

  Does the blower motor run at high speed?

  YES : The BLW-M wire is OK. Go to step 7.

  NO : Repair an open in the wire between the power transistor and the blower motor.

7. Shorted wire check (BLOWER G, BLOWER V lines):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the jumper wire.
   - 3. Disconnect the following connector.

     HVAC control unit 32P connector

   - 4. Check for continuity between test points 1 and 2 individually.

     Test condition IG LOCK (0)

     HVAC control unit 32P connector: disconnected

     Power transistor 4P connector: disconnected

     Test circuit BLOWER G

     Test point 1 HVAC control unit 32P connector No. 9 (GRN)

Test circuit BLOWER V

Test point 1 HVAC control unit 32P connector No. 10 (RED)

Test point 2 Body ground

Fig. 8: Checking Continuity Between HVAC Control Unit 32P Connector No. 9, 10 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to body ground in the wire(s) between the HVAC control unit and the power transistor.

NO : The BLOWER G and BLOWER V wires are not shorted to ground. Go to step 8.

8. Open wire check (BLOWER G/BLW-G, BLOWER V/BLW-V lines):
   - 1. Check for continuity between test points 1 and 2 respectively.

     Test condition IG LOCK (0)

     HVAC control unit 32P connector: disconnected

     Power transistor 4P connector: disconnected

     Test circuit BLOWER G/BLW-G

     Test point 1 HVAC control unit 32P connector No. 9 (GRN)

     Test point 2 Power transistor 4P connector No. 1 (YEL)

     Test circuit BLOWER V/BLW-V

GETtheMANUALS.org

Test point 1 HVAC control unit 32P connector No. 10 (RED)

Test point 2 Power transistor 4P connector No. 2 (BLU)

Fig. 9: Checking Continuity Between HVAC Control Unit 32P Connector And Power Transistor 4P Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The BLOWER G/BLW-G and BLOWER V/BLW-V wires are OK. Go to step 9.

NO : Repair an open in the wire between the HVAC control unit and the power transistor.

9. Power transistor check:
   - 1. Reconnect the HVAC control unit 32P connector.
   - 2. **Test the power transistor** See **BLOWER POWER TRANSISTOR TEST** or **BLOWER POWER TRANSISTOR TEST** .

   Is the power transistor OK?

   YES : **REPLACE THE HVAC CONTROL UNIT** .

   NO : **REPLACE THE POWER TRANSISTOR** .

   If the power transistor is faulty, check the blower motor for damage. If necessary, **REPLACE THE BLOWER MOTOR** .

10. Blower motor relay check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Remove the blower motor relay from the under-hood fuse/relay box, and **TEST IT** .

GETtheMANUALS.org

Is the relay OK?

YES : Go to step 11.

NO : Replace the blower motor relay.

11. Open wire check (+B HTR MTR line):
    - 1. Measure the voltage between test points 1 and 2.

    Test condition IG LOCK (0)

    Blower motor 2P connector: disconnected

    Blower motor relay: disconnected

    Test circuit +B HTR MTR

    Test point 1 Blower motor relay 5P socket No. 1 (Under-hood fuse/relay box)

    Test point 2 Body ground

Fig. 10: Measuring Voltage Between Blower Motor Relay 5P Socket No. 1 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The +B HTR MTR wire is OK. Go to step 12.

NO : An open in +B HTR MTR wire. **REPLACE THE UNDER-HOOD FUSE/RELAY BOX** .

12. Open wire check (IG2 A/C line):
    - 1. Turn the ignition switch to ON (II).
    - 2. Measure the voltage between test points 1 and 2.

    Test condition IG ON (II)

GETtheMANUALS.org

Blower motor 2P connector: disconnected

Blower motor relay: disconnected

Test circuit IG2 A/C

Test point 1 Blower motor relay 5P socket No. 3 (PNK) (Under-hood fuse/relay box)

Test point 2 Body ground

Fig. 11: Measuring Voltage Between Blower Motor Relay 5P Socket No. 3 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The IG2 A/C wire is OK. Go to step 13.

NO : Repair an open in the wire between the No. B22 (7.5 A) fuse in the under-dash fuse/relay box and the blower motor relay.

13. Open wire check (GND line):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Check for continuity between test points 1 and 2.

    Test condition IG LOCK (0)

    Blower motor 2P connector: disconnected

    Blower motor relay: disconnected

    Test circuit GND

    Test point 1 Blower motor relay 5P socket No. 5 (BRN) (Under-hood fuse/relay box)

    Test point 2 Body ground

GETtheMANUALS.org

Fig. 12: Checking Continuity Between Blower Motor Relay 5P Socket No. 5 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair an open in the wire between the blower motor relay and the blower motor.

NO : Check for an open in the wire between the blower motor relay and body ground. If the wire is OK, check for poor ground at G402.

DTC INDICATOR 11: HVAC CONTROL UNIT INTERNAL ERROR

Fig. 13: HVAC DTC Troubleshooting Flow Chart (11)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. Problem verification:
   - 1. Turn the ignition switch to LOCK (0), and then back to ON (II).
   - 2. **DO THE SELF-DIAGNOSTIC FUNCTION WITH THE HVAC CONTROL UNIT** .
   - 3. Check for DTCs.

   Is DTC 11 indicated?

   YES : **REPLACE THE HVAC CONTROL UNIT** .

   NO : Intermittent failure, the HVAC control unit is OK at this time.

GETtheMANUALS.org

DTC INDICATOR 12: AN OPEN IN THE EVAPORATOR TEMPERATURE SENSOR CIRCUIT

Fig. 14: HVAC DTC Troubleshooting Flow Chart (12)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. Problem verification:
   - 1. Turn the ignition switch to LOCK (0), and then back to ON (II).
   - 2. **DO THE SELF-DIAGNOSTIC FUNCTION WITH THE HVAC CONTROL UNIT** .
   - 3. Check for DTCs.

     Is DTC 12 indicated?

     YES : Go to step 2.

     NO : Intermittent failure. Check for loose wires or poor connections on the evaporator temperature sensor circuit.

2. Evaporator temperature sensor check:
   - 1. Turn the ignition switch to LOCK (0).

GETtheMANUALS.org

- 2. **REMOVE THE EVAPORATOR TEMPERATURE SENSOR, AND TEST IT** .

  Is the evaporator temperature sensor OK?

  YES : With the evaporator temperature sensor disconnected, go to step 3.

  NO : **REPLACE THE EVAPORATOR TEMPERATURE SENSOR** .

3. Open wire check (TEVA line):
   - 1. Disconnect the following connector.

     HVAC control unit 32P connector

   - 2. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     HVAC control panel 32P connector: disconnected

     Evaporator temperature sensor: disconnected

     Test circuit TEVA

     Test point 1 HVAC control unit 32P connector No. 19 (ORN)

     Test point 2 Evaporator temperature sensor 2P connector No. 1 (BRN)

Fig. 15: Checking Continuity Between HVAC Control Unit 32P Connector No. 19 And Evaporator Temperature Sensor 2P Connector No. 1
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

Is there continuity?

YES : The TEVA wire is OK. Go to step 4.

NO : Repair an open in the wire between the HVAC control unit and the evaporator temperature sensor.

4. Open wire check (SENSOR COM/SENS-COM lines):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     HVAC control panel 32P connector: disconnected

     Evaporator temperature sensor: disconnected

     Test circuit SENSOR COM/SENS-COM

     Test point 1 HVAC control unit 32P connector No. 20 (GRY)

     Test point 2 Evaporator temperature sensor 2P connector No. 2 (RED)

Fig. 16: Checking Continuity Between HVAC Control Unit 32P Connector No. 20 And Evaporator Temperature Sensor 2P Connector No. 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The SENSOR COM/SENS-COM wires are OK. **REPLACE THE HVAC CONTROL UNIT** .

GETtheMANUALS.org

NO : Repair an open in the wire between the HVAC control unit and the evaporator temperature sensor.

DTC INDICATOR 13: A SHORT IN THE EVAPORATOR TEMPERATURE SENSOR CIRCUIT

Fig. 17: HVAC DTC Troubleshooting Flow Chart (13)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. Problem verification:
   - 1. Turn the ignition switch to LOCK (0), and then back to ON (II).
   - 2. **DO THE SELF-DIAGNOSTIC FUNCTION WITH THE HVAC CONTROL UNIT** .
   - 3. Check for DTCs.

   Is DTC 13 indicated?

   YES : Go to step 2.

   NO : Intermittent failure. Check for loose wires or poor connections on the evaporator temperature circuit.

2. Evaporator temperature sensor check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. **REMOVE THE EVAPORATOR TEMPERATURE SENSOR, AND TEST IT** .

   Is the evaporator temperature sensor OK?

GETtheMANUALS.org

YES : With the evaporator temperature sensor disconnected, go to step 3.

NO : **REPLACE THE EVAPORATOR TEMPERATURE SENSOR** .

3. Shorted wire check (TEVA line):
   - 1. Disconnect the following connector.

     HVAC control unit 32P connector

   - 2. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     HVAC control panel 32P connector: disconnected

     Evaporator temperature sensor: disconnected

     Test circuit TEVA

     Test point 1 HVAC control unit 32P connector No. 19 (ORN)

     Test point 2 Body ground

Fig. 18: Checking Continuity Between HVAC Control Unit 32P Connector No. 19 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to body ground in the wire between the HVAC control unit and the evaporator temperature sensor.

NO : The TEVA wire is OK. **REPLACE THE HVAC CONTROL UNIT** .

DTC INDICATOR 2: A SHORT IN THE AIR MIX CONTROL MOTOR CIRCUIT

GETtheMANUALS.org

Fig. 19: HVAC DTC Troubleshooting Flow Chart (2)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. Problem verification:
   - 1. Turn the ignition switch to LOCK (0), and then back to ON (II).
   - 2. **DO THE SELF-DIAGNOSTIC FUNCTION WITH THE HVAC CONTROL UNIT** .
   - 3. Check for DTCs.

     Is DTC 2 indicated?

     YES : Go to step 2.

     NO : Intermittent failure. Check for loose wires or poor connections on the air mix control motor circuit.

2. Shorted wire check (AMD P DR, SENSOR 5V lines):
   1. Turn the ignition switch to LOCK (0).
   2. Disconnect the following connectors.

      HVAC control unit 32P connector

      Air mix control motor 7P connector

   3. Check for continuity between test points 1 and 2 individually.

      Test condition IG LOCK (0)

GETtheMANUALS.org

HVAC control unit 32P connector: disconnected

Air mix control motor 7P connector: disconnected

Test circuit SENSOR 5V

Test point 1 HVAC control unit 32P connector No. 17 (LT BLU)

Test point 2 Body ground

Test circuit AMD P DR

Test point 1 HVAC control unit 32P connector No. 22 (LT GRN)

Test point 2 Body ground

Fig. 20: Checking Continuity Between HVAC Control Unit 32P Connector No. 17, 22 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to body ground in the wire(s) between the HVAC control unit and the air mix control motor.

NO : The AMD P DR and SENSOR 5V wires are OK. Go to step 3.

3. Air mix control motor check:
   - 1. **Test the air mix control motor** See **AIR MIX CONTROL MOTOR TEST** , **DRIVER'S AIR MIX CONTROL MOTOR TEST** or **PASSENGER'S AIR MIX CONTROL MOTOR TEST** .

     Is the air mix control motor OK?

     YES : **REPLACE THE HVAC CONTROL UNIT** .

     NO : **Replace the air mix control motor** See **AIR MIX CONTROL MOTOR REMOVAL AND INSTALLATION** , **DRIVER'S AIR MIX CONTROL MOTOR REMOVAL AND**

GETtheMANUALS.org

INSTALLATION or **PASSENGER'S AIR MIX CONTROL MOTOR REMOVAL AND INSTALLATION** .

DTC INDICATOR 3: A PROBLEM IN THE AIR MIX CONTROL MOTOR CIRCUIT, LINKAGE, DOOR, OR MOTOR

Fig. 21: HVAC DTC Troubleshooting Flow Chart (3)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. Problem verification:
   - 1. Turn the ignition switch to LOCK (0), and then back to ON (II).
   - 2. **DO THE SELF-DIAGNOSTIC FUNCTION WITH THE HVAC CONTROL UNIT** .
   - 3. Check for DTCs.

   Is DTC 3 indicated?

   YES : Go to step 2.

   NO : Intermittent failure. Check for loose wires or poor connections in the air mix control motor circuit.

GETtheMANUALS.org

2. Open wire check (M-HOT DR/M-HOT, M-COOL DR/M-COOL lines):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Disconnect the following connectors.

      HVAC control unit 32P connector

      Air mix control motor 7P connector

    - 3. Check for continuity between test points 1 and 2 respectively.

      Test condition IG LOCK (0)

      HVAC control unit 32P connector: disconnected

      Air mix control motor 7P connector: disconnected

      Test circuit M-HOT DR/M-HOT

      Test point 1 HVAC control unit 32P connector No. 27 (LT BLU)

      Test point 2 Air mix control motor 7P connector No. 7 (LT GRN)

      Test circuit M-COOL DR/M-COOL

      Test point 1 HVAC control unit 32P connector No. 28 (GRN)

      Test point 2 Air mix control motor 7P connector No. 6 (BLU)

Fig. 22: Checking Continuity Between HVAC Control Unit 32P Connector And Air Mix Control Motor 7P Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

GETtheMANUALS.org

YES : The M-HOT DR/M-HOT and M-COOL DR/M-COOL wires are not open. Go to step 3.

NO : Repair an open in the wire(s) between the HVAC control unit and the air mix control motor.

3. Shorted wire check (M-HOT DR/M-HOT, M-COOL DR/M-COOL lines):
   - 1. Check for continuity between test points 1 and 2 individually.

     Test condition IG LOCK (0)

     HVAC control unit 32P connector: disconnected

     Air mix control motor 7P connector: disconnected

     Test circuit M-HOT DR

     Test point 1 HVAC control unit 32P connector No. 27 (LT BLU)

     Test point 2 Body ground

     Test circuit M-COOL DR

     Test point 1 HVAC control unit 32P connector No. 28 (GRN)

     Test point 2 Body ground

Fig. 23: Checking Continuity Between HVAC Control Unit 32P Connector And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to body ground in the wire(s) between the HVAC control unit and the air mix control motor.

NO : The M-HOT DR and M-COOL DR wires are OK. Go to step 4.

4. Air mix control motor check:
   - 1. **Test the air mix control motor** See **AIR MIX CONTROL MOTOR TEST** , **DRIVER'S AIR**

GETtheMANUALS.org

MIX CONTROL MOTOR TEST or **PASSENGER'S AIR MIX CONTROL MOTOR TEST** .

Is the air mix control motor OK?

YES : **REPLACE THE HVAC CONTROL UNIT** .

NO : **Replace the air mix control motor** See **AIR MIX CONTROL MOTOR REMOVAL AND INSTALLATION** , **DRIVER'S AIR MIX CONTROL MOTOR REMOVAL AND INSTALLATION** or **PASSENGER'S AIR MIX CONTROL MOTOR REMOVAL AND INSTALLATION** , or repair the air mix control linkage or door.

DTC INDICATOR 4: AN OPEN IN THE MODE CONTROL MOTOR CIRCUIT

Fig. 24: HVAC DTC Troubleshooting Flow Chart (4)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. Problem verification:
   - 1. Turn the ignition switch to LOCK (0), and then back to ON (II).
   - 2. **DO THE SELF-DIAGNOSTIC FUNCTION WITH THE HVAC CONTROL UNIT** .
   - 3. Check for DTCs.

   Is DTC 4 indicated?

   YES : Go to step 2.

   NO : Intermittent failure. Check for loose wires or poor connections on the mode control motor circuit.

GETtheMANUALS.org

2. DTC check:
    - 1. Check for DTCs.

      Is DTC 1 or 7 indicated?

      YES : Repair an open in the wire between the HVAC control unit No. 20 (GRY) and the mode control motor.

      NO : Go to step 3.

3. Open wire check (MODE-P line):
    1. Turn the ignition switch to LOCK (0).
    2. Connect terminals A and B with a jumper wire.

       Terminal A Mode control motor 7P connector No. 2 (BRN)

       Terminal B Body ground

Fig. 25: Connecting Jumper Wire Between Mode Control Motor 7P Connector No. 2 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. Turn the ignition switch to ON (II).
    4. **DO THE SELF-DIAGNOSTIC FUNCTION WITH THE HVAC CONTROL UNIT** .
    5. Check for DTCs.

       Is DTC 4 indicated?

       YES : Repair an open in the wire between the HVAC control unit and the mode control motor.

       NO : The MODE-P wire is OK. **REPLACE THE MODE CONTROL MOTOR** .

DTC INDICATOR 5: A SHORT IN THE MODE CONTROL MOTOR CIRCUIT

GETtheMANUALS.org

Fig. 26: HVAC DTC Troubleshooting Flow Chart (5)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. Problem verification:
   - 1. Turn the ignition switch to LOCK (0), and then back to ON (II).
   - 2. **DO THE SELF-DIAGNOSTIC FUNCTION WITH THE HVAC CONTROL UNIT** .
   - 3. Check for DTCs.

   Is DTC 5 indicated?

   YES : Go to step 2.

   NO : Intermittent failure. Check for loose wires or poor connections on the mode control motor circuit.

2. DTC check:

GETtheMANUALS.org

- 1. Turn the ignition switch to LOCK (0).
- 2. Disconnect the following connector.

  Mode control motor 7P connector

- 3. Turn the ignition switch to ON (II).
- 4. **DO THE SELF-DIAGNOSTIC FUNCTION WITH THE HVAC CONTROL UNIT** .
- 5. Check for DTCs.

  Is DTC 5 indicated?

  YES : Go to step 3.

  NO : **REPLACE THE MODE CONTROL MOTOR** .

3. Mode control motor S5V line check:
   - 1. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     Mode control motor 7P connector: disconnected

     Test circuit S5V

     Test point 1 Mode control motor 7P connector No. 1 (BLK)

     Test point 2 Body ground

Fig. 27: Measuring Voltage Between Mode Control Motor 7P Connector No. 1 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. Problem verification:
   - 1. Turn the ignition switch to LOCK (0), and then back to ON (II).
   - 2. **DO THE SELF-DIAGNOSTIC FUNCTION WITH THE HVAC CONTROL UNIT** .
   - 3. Check for DTCs.

     Is DTC 9 indicated?

     YES : Go to step 2.

     NO : Intermittent failure. Check for loose wires or poor connections on the recirculation control motor circuit.

2. Open wire check (F/R MTR(FRESH)/FRS, F/R MTR(REC)/REC lines):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connectors.

     HVAC control unit 32P connector

GETtheMANUALS.org

Recirculation control motor 7P connector

- 3. Check for continuity between test points 1 and 2 respectively.

Test condition IG LOCK (0)

HVAC control unit 32P connector: disconnected

Recirculation control motor 7P connector: disconnected

Test circuit F/R MTR(FRESH)/FRS

Test point 1 HVAC control unit 32P connector No. 32 (BLU)

Test point 2 Recirculation control motor 7P connector No. 6 (RED)

Test circuit F/R MTR(REC)/REC

Test point 1 HVAC control unit 32P connector No. 31 (BLK)

Test point 2 Recirculation control motor 7P connector No. 7 (ORN)

Fig. 38: Checking Continuity Between HVAC Control Unit 32P Connector No. 31 And Recirculation Control Motor 7P Connector No. 7 Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The F/R MTR(FRESH)/FRS and F/R MTR(REC)/REC wires are not open. Go to step 3.

NO : Repair an open in the wire(s) between the HVAC control unit and the recirculation control motor.

GETtheMANUALS.org

3. Shorted wire check (F/R MTR(FRESH), F/R MTR(REC) lines):
    - 1. Check for continuity between test points 1 and 2 individually.

      Test condition IG LOCK (0)

      HVAC control unit 32P connector: disconnected

      Recirculation control motor 7P connector: disconnected

      Test circuit F/R MTR(FRESH)

      Test point 1 HVAC control unit 32P connector No. 32 (BLU)

      Test point 2 Body ground

      Test circuit F/R MTR(REC)

      Test point 1 HVAC control unit 32P connector No. 31 (BLK)

      Test point 2 Body ground

Fig. 39: Checking Continuity Between HVAC Control Unit 32P Connector No. 31, 32 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to body ground in the wire(s) between the HVAC control unit and the recirculation control motor.

NO : The F/R MTR(FRESH) and F/R MTR(REC) wires are OK. Go to step 4.

4. Recirculation control motor check:
    - 1. **TEST THE RECIRCULATION CONTROL MOTOR** .

      Is the recirculation control motor OK?

GETtheMANUALS.org

YES : **REPLACE THE HVAC CONTROL UNIT** .

NO : **REPLACE THE RECIRCULATION CONTROL MOTOR, OR REPAIR THE RECIRCULATION CONTROL LINKAGE OR DOOR** .

DTC INDICATOR C0: CLIMATE CONTROL UNIT INTERNAL ERROR

Fig. 40: HVAC DTC Troubleshooting Flow Chart (C0)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. Problem verification:
   - 1. Turn the ignition switch to LOCK (0) and then back to ON (II).
   - 2. **Do the Self-Diagnostic Function with the climate control unit** See **HOW TO TROUBLESHOOT THE BODY ELECTRICAL** or **HOW TO TROUBLESHOOT THE CLIMATE CONTROL SYSTEM** .
   - 3. Check for DTCs.

     Is DTC C0 indicated?

     YES : **REPLACE THE CLIMATE CONTROL UNIT** .

     NO : Intermittent failure, the climate control unit is OK at this time.

GETtheMANUALS.org

A/C SERVICE TIPS AND PRECAUTIONS

WARNING:

- **Compressed air mixed with the R-134a forms a combustible vapor.**
- **The vapor can burn or explode causing serious injury.**
- **Never use compressed air to pressure test R-134a service equipment or vehicle air conditioning systems.**

CAUTION:

- **Air conditioning refrigerant or lubricant vapor can irritate your eyes, nose, or throat.**
- **Be careful when connecting service equipment.**
- **Do not breathe refrigerant or vapor.**

The air conditioning system uses HFC-134a (R-134a) refrigerant and polyalkyleneglycol (PAG) refrigerant oil.

Use only service equipment that is U.L.-listed and is certified to meet the requirements of SAE J2788 to remove R-134a from the air conditioning system.

If accidental system discharge occurs, ventilate the work area before resuming service.

R-134a service equipment or vehicle air conditioning systems should not be pressure tested or leak tested with compressed air.

Additional health and safety information may be obtained from the refrigerant and lubricant manufacturers.

- Always disconnect the negative cable from the battery whenever replacing air conditioning parts.
- Keep moisture and dirt out of the system. When disconnecting any lines, plug or cap the fittings immediately; do not remove the caps or plugs until just before you reconnect each line.
- Before connecting any hose or line, apply a few drops of refrigerant oil to the O-ring.
- When tightening or loosening a fitting, use a second wrench to support the matching fitting.
- When discharging the system, use an R-134a refrigerant recovery/recycling/charging station; do not release refrigerant into the atmosphere.

A/C COMPRESSOR CLUTCH CHECK

REMOVAL

CAUTION:

- **Air conditioning refrigerant or lubricant vapor can irritate your eyes, nose, or throat.**
- **Be careful when connecting service equipment.**
- **Do not breathe refrigerant or vapor.**

NOTE:

- **If accidental system discharge occurs, ventilate the work area before resuming service.**
- **Additional health and safety information may be obtained from the refrigerant and lubricant manufacturers.**
- **Do not install an A/C compressor into a system unless you are completely sure that the system is free of contamination. Installing the A/C compressor into a contaminated system can result in premature A/C compressor failure.**

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Glove Box - Move
    1. Detach the glove box damper hook (A), and release both glove box stops (B) by pushing them in, then let glove box (C) hang down.

GETtheMANUALS.org

Fig. 1: Detaching Glove Box Damper Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. R-134a Refrigerant Recovery/Recycling/Charging Station - Connection
    1. Connect an R-134a refrigerant recovery/recycling/charging station (A) to the high-pressure service port (B) and the low-pressure service port (C), as shown, following the equipment manufacturer's instructions.

Fig. 2: Connecting R-134A Refrigerant Recovery/Recycling/Charging Station To High-Pressure Service Port And Low-Pressure Service Port
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. A/C Refrigerant - Recovery
    1. Recover the refrigerant from the A/C system.
    2. Measure the amount of refrigerant oil removed from the A/C system after the recovery process is completed. Be sure to put the same amount of new refrigerant oil back into the A/C system before charging.
5. Battery Terminal - Disconnection
    1. Make sure the ignition switch is in LOCK (0).
    2. Disconnect and isolate the negative cable (A) from the battery.

NOTE: Always disconnect the negative side first.

GETtheMANUALS.org

3. Disconnect the positive cable (B) from the battery.

Fig. 3: Identifying Negative Cable And Positive Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Drive Belt
    1. Move the auto-tensioner (A) using the belt tension release tool in the direction of the arrow to relieve tension from the drive belt, then remove the drive belt.

Fig. 4: Moving Auto-Tensioner Using Belt Tension Release Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Front Splash Shield
    1. Remove the bolts (A), then remove the clips (B) that secure the front inner fender and the front splash shield (C) to the body.

GETtheMANUALS.org

2. From under the front bumper (D), remove the clips (E).
3. From under the body, remove the clips (F), then pull out the front splash shield.

Fig. 5: Identifying Front Splash Shield, Front Bumper, Bolts And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. A/C Compressor Assembly
   1. Disconnect the A/C compressor clutch connector (A).
   2. Disconnect the suction hose (B) with a O-ring (C).

      NOTE: Plug or cap the lines immediately after disconnecting them to avoid moisture and dust contamination.

   3. Disconnect the discharge hose (D) with a O-ring (E).

      NOTE: Plug or cap the lines immediately after disconnecting them to avoid moisture and dust contamination.

GETtheMANUALS.org

Fig. 6: Identifying A/C Compressor Clutch Connector, Suction Hose, Discharge Hose And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the A/C compressor (A).

Fig. 7: Identifying A/C Compressor With Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

CHECK

1. A/C Compressor Clutch - Check
    1. Check the armature plate for discoloration, peeling, or other damage. If there is damage, replace the clutch set.
    2. Check the rotor pulley bearing play and drag by rotating the rotor pulley by hand. Also check for grease leakage from the bearing. Replace the clutch set with a new one if it is noisy, has excessive play/drag, or has bearing grease contamination on the clutch faces.

GETtheMANUALS.org

NOTE: **The rotor pulley and the armature plate were mated at the factory by a burnishing operation. Always replace the rotor pulley and the plate as a set. Replacing only one part of the clutch set will cause clutch slippage.**

Fig. 8: Checking Rotor Pulley Bearing Play And Drag By Rotating Rotor Pulley
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Measure the clearance between the rotor pulley (A) and the armature plate (B) all the way around. If the clearance is not within specified limits, remove the armature plate and add or remove shims as needed to increase or decrease clearance.

Clearance: 0.35-0.65 mm (0.014-0.025 in)

NOTE: **The shims are available in four thicknesses: 0.1 mm, 0.2 mm, 0.4 mm, and 0.5 mm.**

Fig. 9: Measuring Clearance Between Rotor Pulley And Armature Plate

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Check for continuity between the A/C compressor clutch connector terminals No. 2 and No. 3. If there is no continuity, replace the thermal protector.

NOTE: **The thermal protector will have no continuity above about 252 to 262 °F (122 to 128 °C). When the temperature drops below about 241 to 219 °F (116 to 104 °C), the thermal protector will have continuity.**

Fig. 10: Checking For Continuity Between A/C Compressor Clutch Connector Terminals No. 2 And No. 3
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Disconnect the connector (A).
6. Measure the resistance of the field coil. If resistance is not within specifications, replace the field coil.

Field Coil Resistance: 3.35-3.65 ohms at 68 °F (20 °C)

Fig. 11: Measuring Resistance Of Field Coil

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

CAUTION:

- **Air conditioning refrigerant or lubricant vapor can irritate your eyes, nose, or throat.**
- **Be careful when connecting service equipment.**
- **Do not breathe refrigerant or vapor.**
- **Do not operate the leak detector near flammable vapors. Its sensor operates at high temperatures, and could ignite the vapors, resulting in personal injury and/or damage to the equipment.**

NOTE:

- **If an accidental system discharge occurs, ventilate the work area before resuming service.**
- **Additional health and safety information may be obtained from the refrigerant and lubricant manufacturers.**
- **Check the system for leaks using an R-134a refrigerant leak detector with an accuracy of 14 g (0.5 oz) per year or better.**
- **Do not install an A/C compressor into a system unless you are completely sure that the system is free of contamination. Installing the A/C compressor into a contaminated system can result in premature A/C compressor failure.**
- **Inspect the A/C lines for any signs of contamination.**
- **Replace the O-rings with new ones at each fitting, and apply a thin coat of refrigerant oil before installing them. Be sure to use the correct O-rings for HFC-134a (R-134a) to avoid leakage.**
- **Use only PAG refrigerant oil for HFC-134a A/C systems.**
- **To avoid contamination, do not return the oil to the container once dispensed, and never mix it with other refrigerant oils.**
- **Immediately after using the oil, reinstall the cap on the container, and seal it to avoid moisture absorption.**
- **Do not spill the refrigerant oil on the vehicle; it may damage the paint; if the refrigerant oil contacts the paint, wash it off immediately.**

1. A/C Refrigerant Oil - Replacement

   Recommended PAG oil: SP-10

   P/N 38897-P13-A01AH: 120 mL (4 fl oz)

   It is important to have the correct amount of refrigerant oil in the A/C system to ensure proper lubrication of the A/C compressor. Too little oil damages the A/C compressor; too much oil reduces the cooling capacity of the system, and can produce high vent temperatures.

GETtheMANUALS.org

- To avoid contamination, do not return the oil to the container once dispensed, and never mix it with other refrigerant oils.
- Immediately after using the oil, reinstall the cap on the container, and seal it to avoid moisture absorption.
- Do not spill the refrigerant oil on the vehicle; it may damage the paint; if it gets on the paint, wash it off immediately.

Add the recommended refrigerant oil in the amount listed if you replace any of the following parts.

A/C condenser (including dryer desiccant).....	25 mL (5/6 fl oz)
Evaporator.....	40 mL (1 1/3 fl oz)
Line or hose.....	10 mL (1/3 fl oz)
Dryer desiccant.....	10 mL (1/3 fl oz)
Leakage repair.....	25 mL (5/6 fl oz)
A/C compressor.....	Since the oil separator is equipped inside the A/C compressor for this vehicle, oil drainage is unnecessary at the time of A/C compressor replacement.

2. A/C Compressor Assembly
   1. Install the A/C compressor (A).

Fig. 12: Identifying A/C Compressor And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

   2. Remove the plugs or caps.
   3. Connect the suction hose (A) with a new O-ring (B) that is lubricated with clean refrigerant oil.
   4. Connect the discharge hose (C) with a new O-ring (D) that is lubricated with clean refrigerant oil.
   5. Connect the A/C compressor clutch connector (E).

GETtheMANUALS.org

Fig. 13: Identifying A/C Compressor Clutch Connector, Suction Hose, Discharge Hose, O-Ring And Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Splash Shield
    1. Install the front splash shield (A), then install the bolts (B) and the clips (C, D). Make sure the clips snap into place securely.

GETtheMANUALS.org

Fig. 14: Identifying Front Splash Shield, Bolts And Clips With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Drive Belt
    1. Install the drive belt.

Fig. 15: Installing Drive Belt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Battery Terminal - Reconnection

GETtheMANUALS.org

NOTE: If the battery performance is abnormal, test the battery.

1. Clean the battery terminals.
2. Connect the positive cable (A) to the battery.

   NOTE: Always connect the positive side first.

3. Connect the negative cable (B) to the battery.
4. Apply multipurpose grease to the terminals to prevent corrosion.

Fig. 16: Identifying Multipurpose Grease Applying Area On Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. R-134a Refrigerant Recovery/Recycling/Charging Station - Connection
   1. Connect an R-134a refrigerant recovery/recycling/charging station (A) to the high-pressure service port (B) and the low-pressure service port (C), as shown, following the equipment manufacturer's instructions.

GETtheMANUALS.org

Fig. 17: Connecting R-134A Refrigerant Recovery/Recycling/Charging Station To High-Pressure Service Port And Low-Pressure Service Port
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. A/C System Evacuation
    1. Evacuate the system. The vacuum pump should run for a minimum of 30 minutes to eliminate all moisture from the system. When the suction gauge reads -93.3 kPa (-700 mmHg, - 27.55 inHg) for at least 30 minutes, close all valves, and turn off the vacuum pump.
    2. If the suction gauge dose not reach approximately -93.3 kPa (-700 mmHg, -27.55 inHg) in 15 minutes, there is probably a large leak in the system. Partially charge the system, and check for leaks.
8. A/C Refrigerant - Charging
    1. Charge the system with the specified amount of R-134a refrigerant. Do not overcharge the system; the A/C compressor will be damaged.

       Select the appropriate units of measure for your refrigerant charging station.

       Refrigerant Capacity:

       385 to 435 g

       13.6 to 15.4 oz

       0.385 to 0.435 kg

GETtheMANUALS.org

0.849 to 0.959 lbs

9. A/C Refrigerant - Leak Check

Leak Detector Usage Tips (Refer to the Operator's Manual for complete operating instructions)

- Position the vehicle in a wind-free work area. This will aid in detecting small leaks.
- When using the leak detector for the first time, allow it to warm up for 2 minutes with the probe in a clean atmosphere. This lets the temperature sensor in the detector stabilize.
- The calibration check should be done in the "Search 2" mode. Once that is done, the other check modes do not need calibrating.
- When leak checking through the HVAC module drain hose, avoid drawing water into the probe. Water can damage the internal pump and sensor.
- Avoid creasing the flexible probe extension. Creases can restrict air flow and give false readings.
- Because the detector recalibrates itself for ambient gases, it may be necessary to move the detector away from the leak to clear the sensor. Once the sensor has cleared, recheck the suspected leak.
- When removing the clear probe tip, be careful not to lose the flow ball.
- R-134a is heavier than air; always check below and to the sides of all potential leak sources.
- Halogen leak detectors are sensitive to chemicals: windshield washing solutions, solvents/cleaners, and some vehicle adhesives. Keep these chemicals out of the area when doing leak detection.

Fluorescent Dye Usage Tips

- Use only Tracer-Stick single dose fluorescent dye capsules from Tracerline®. Other dyes contain solvents that may contaminate the refrigerant oil, leading to component failure.
- Adding excessive amounts of dye can damage the A/C compressor.
- PAG oil is water soluble, so condensation on the evaporator core or the refrigerant lines may wash the PAG oil and fluorescent dye away from the actual leak. Condensation may also carry dye through the HVAC module drain.
- After checking and repairing leaks, thoroughly clean any residual dye from the areas where leaks were found. Use GLO-AWAY dye cleaner, from Tracerline®, and hot water to remove the dye (follow the instructions on the bottle). Residual dye stains can cause misdiagnosis of any future A/C system leaks.
- If any refrigerant dye contacts an exterior paint surface, remove it by doing this:
  - Carefully wash the affected surfaces to remove any dirt, and to prevent paint scratching.
  - Mix water and isopropyl alcohol in a 50/50 mixture. Soak a soft 100 % cotton towel with the water/alcohol mixture, and place the cloth on the affected areas to remove the dye.
  - After removing the dye with the water/alcohol-soaked cloth, carefully wash the affected areas, and check that there is no remaining dye.

1. With the engine OFF, use a halogen leak detector first to detect the leak source. Follow a continuous path in order to ensure that you will not miss any possible leaks. Test the following areas of the system for leaks:

GETtheMANUALS.org

Possible Leak Area	Diagnostic Procedure with the Leak Detector	Notes
Service ports	• Check the service ports with caps installed • If the detector "sniffs" a leak, use fluorescent dye to confirm it	When capping the service ports, ensure that the seals on the port caps are in place, and that the caps are tight. The caps are used as the final seals in the system
A/C condenser	If the detector "sniffs" a leak, use fluorescent dye to confirm it	• Check for joints or connections coated with oily dust • Check for damaged and corroded areas • Check all fittings, couplings, brazed/welded areas and areas around attachment points • Move the probe slowly (1 in/second or less), and keep it within 1/4 in of the component being checked. This maximizes the chance of detecting a leak • If you detect a leak, blow compressed air over the area, then recheck for leaks. For large leaks, clearing the area with compressed air may help you pinpoint the leak source
Evaporator	• Check at the evaporator drain hose • Check at the passenger's side vent and turn the blower on at low speed	
A/C lines	• Wiggle the rubber hoses when checking crimped metal ends • If the detector "sniffs" a leak, use fluorescent dye to confirm it	• Check all fittings, couplings, pressure switches, brazed/welded areas, and areas around attachment points on A/C lines and components • Check for damaged and corroded areas • Move the probe slowly (1 in/second or less), and keep it within 1/4 in of the component being checked. This maximizes the chance of detecting a leak

2. Close the quick coupler valves, then disconnect the quick couplers from the vehicle service ports.
3. Attach the universal connect set, from the Optimax Jr. Leak Detection Kit, to the service valve fitting. Close the control valve (the black knob on the connect set).
4. Attach the charging station low pressure hose quick coupler to the service valve fitting, and open the quick coupler valve. Evacuate the connect set using the charging station vacuum pump, then close the quick coupler valve.
5. Detach the universal connect set, and install a Tracer-Stick® dye capsule between the connect set and the service valve fitting (see the manufacturer's instructions for more detail).

GETtheMANUALS.org

6. Attach the quick coupler on the universal connect set to the low pressure service port on the vehicle. Open the charging station low pressure hose quick coupler valve, but do not open the control valve.
7. Start the engine, and set the A/C system to maximum cooling. Open the control valve to let refrigerant and the dye enter the A/C system through the low pressure service port. Close the control valve when the Tracer-Stick® dye capsule is empty.
8. Run the engine and A/C system for 15 minutes to thoroughly circulate the dye. Then shut the engine off, and inspect the following areas of the system for leaks:

NOTE:

- **Check for leaks in a dark work area, and use the UV light and the special glasses from the leak check kit. Other UV lights may not work well with the Tracer-Stick® dye.**
- **Small leaks may take up to 1 week of vehicle operation (with normal A/C use) to become visible.**

Possible Leak Area	Diagnostic Procedure with Fluorescent Dye
Service ports	If a leak is found, replace the cap/o-ring seal or A/C line as needed
A/C lines	• Use a permanent marker pen to circle the leak area • If a leak is found, remove and replace the A/C line
A/C condenser	• If a leak is found, remove the A/C condenser • Determine whether leak is in the A/C condenser or the receiver/dryer • Use a permanent marker pen to circle the leak area • Replace either the receiver/dryer, or the A/C condenser, depending upon which is leaking
A/C compressor	• Check for leaks at all of the A/C compressor joints, the clutch center, the A/C compressor front housing bolts, and the scroll bolts on the back of the A/C compressor • If a leak is found, use a permanent marker pen to circle the leak area • If the A/C compressor relief valve appears to be leaking, determine whether the leak is coming from the relief valve, or the joint between the A/C compressor casing and the valve. If the leak is from the relief valve, check the A/C system pressures, and refer to the pressure test table in the A/C system test. If the leak is from the casing/valve joint, replace the A/C compressor relief valve • If the leak is coming from the suction hose and/or discharge hose fittings on the A/C compressor, clean the A/C fittings and replace the suction/discharge fitting O-rings • For all other A/C compressor leaks, remove and replace the A/C compressor
	• Start checking for evaporator leaks by illuminating the evaporator drain tube area

GETtheMANUALS.org

Evaporator	• If a leak is found, remove the evaporator core • Determine whether leak is from evaporator or expansion valve • Use a permanent marker pen to circle leak area • Replace the expansion valve, or the evaporator core, depending upon which is leaking

10. A/C System - Test
    1. Insert a thermometer (A) in the center vent.
    2. Place a hygro-thermometer (B) near the blower unit's recirculation inlet duct.
    3. Test conditions:
        - Move the vehicle out of direct sunlight and let it cool down to the surrounding (ambient) temperature. If necessary, wash the vehicle to cool it down more quickly.
        - The blower intake temperature must be at least 68°F (20°C).
        - Open the hood.
        - Open the front doors.
        - Start the engine.
        - Set the temperature control dial or temperature control button to MAX COOL, the mode control button to VENT, and the recirculation control button to RECIRCULATE.
        - Turn the A/C button on and the fan control dial or fan control button to Max.
        - Run the engine at 1, 500 rpm.
        - No driver or passengers in vehicle.

Fig. 18: Inserting Thermometer In Center Vent

GETtheMANUALS.org

4. Inspect the A/C components for the following conditions:
   - A/C compressor clutch not engaged.
   - Abnormal frost areas.
   - Unusual noises.

   If you observe any of these conditions, refer to the Symptom Troubleshooting Index.

5. After running the air conditioning for 10 minutes under the above test conditions, read the delivery temperature from the thermometer in the center vent, the intake temperature near the blower unit, and the discharge (high) and suction (low) pressures on the A/C gauges.
6. To complete the vent (delivery)/intake temperature chart:
   - Mark the vent (delivery) temperature on the vertical line.
   - Mark the intake temperature on the bottom line.
   - Draw a vertical line from the intake temperature mark.
   - Draw a horizontal line from the vent (delivery) temperature mark until it intersects the vertical line.

NOTE: **The vent temperature and intake temperature should intersect in the shaded area. Any measurements outside the line may indicate the need for further inspection.**

GETtheMANUALS.org

Fig. 19: Intake Temperature And Vent (Delivery) Temperature Graph
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. To complete the high side (discharge) pressure/intake temperature chart:
   - Mark the high side (discharge) pressure on the vertical line.
   - Mark the intake temperature on the bottom line.
   - Draw a vertical line from the intake temperature mark.
   - Draw a horizontal line from the high side (discharge) pressure mark until it intersects the vertical line.

NOTE: **The high side pressure and intake temperature should intersect in the shaded area. Any measurements outside the line may indicate the need for further inspection.**

GETtheMANUALS.org

Fig. 20: Intake Temperature And High Side (Discharge) Pressure Graph
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. To complete the low side (suction) pressure/intake temperature chart:
   - Mark the low side (suction) pressure along the vertical line.
   - Mark the intake temperature along the bottom line.
   - Draw a vertical line from the intake temperature mark.
   - Draw a horizontal line from the low side (suction) pressure mark until it intersects the vertical line.

NOTE: **The low side pressure and intake temperature should intersect in the shaded area. Any measurements outside the line may indicate the need for further inspection.**

GETtheMANUALS.org

Fig. 21: Intake Temperature And Low Side (Suction) Pressure Graph
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Glove Box - Move
    1. Install the glove box (A). Make sure the glove box stops (B) snap into place securely.
    2. Install the glove box damper hook (C).

GETtheMANUALS.org

A/C COMPRESSOR CLUTCH OVERHAUL

SPECIAL TOOL REQUIRED DESCRIPTION

Image	Description/Tool Number
	A/C Compressor Kit 07AAF-000A150

GETtheMANUALS.org

DISASSEMBLY

1. A/C Compressor Armature Plate
    1. Remove the center nut while holding the armature plate (A) with the A/C clutch holder (B).

NOTE: **Do not hammer or pry on the rotor pulley to remove it. Using a hammer damages the A/C compressor. If the rotor pulley is difficult to remove, use a commercially available pulley removing tool. Make sure the jaws of the pulling tool engage the back face of the rotor pulley, not the rotor pulley grooves.**

Fig. 23: Removing Center Nut While Holding Armature Plate With A/C Clutch Holder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the armature plate (A) and the shim(s) (B), taking care not to lose the shim(s).

NOTE:

- **Inspect the armature plate and the rotor pulley friction surfaces for wear. If there is excessive wear, roughness, or scoring, replace the clutch set.**
- **If A/C compressor oil is found, replace the A/C compressor.**
- **A leaking A/C compressor front shaft seal should be inspected at this step.**

GETtheMANUALS.org

Fig. 24: Identifying Armature Plate And Shim(S)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. A/C Compressor Rotor Pulley
    1. Remove the snap ring (A) with the snap ring pliers.
    2. Remove the rotor pulley (B).

NOTE: Be careful not to damage the rotor pulley or the A/C compressor.

Fig. 25: Identifying Rotor Pulley And Snap Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. A/C Compressor Field Coil
    1. Remove the holders (A).
    2. Disconnect the connector (B).
    3. Remove the snap ring (C) with the snap ring pliers.

GETtheMANUALS.org

4. Remove the field coil (D). Be careful not to damage the field coil and A/C compressor.

NOTE: **Inspect the friction surfaces and the A/C compressor shaft hub for excess oil. If excess oil is present, and it is not from the engine system, then the A/C compressor shaft seal is leaking. Replace the A/C compressor.**

Fig. 26: Identifying Field Coil, Snap Ring, Connector And Holders
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REASSEMBLY

NOTE:

- **When replacing the field coil, check that the new coil has the correct resistance.**
- **Install the field coil with the wire side facing down, and align the boss on the field coil with the hole in the A/C compressor.**
- **Clean the rotor pulley and the armature plate with contact cleaner or other non-petroleum solvent.**
- **Install new snap rings, note the installation direction, and make sure they are fully seated in the grooves.**
- **Make sure that the rotor pulley turns smoothly after it's reassembled.**
- **Route and clamp the wires properly to prevent damage by the rotor pulley.**
- **After reinstallation, cycle the A/C clutch approximately 20 times by running the engine at 1, 500-2, 000 rpm and setting the A/C system to Max Cool mode. This procedure seats the clutch sliding surfaces, and increases clutch torque capacity.**

GETtheMANUALS.org

1. A/C Compressor Field Coil
    1. Install the field coil (A).

        NOTE: Be careful not to damage the field coil and the A/C compressor.

    2. Install the snap ring (B) with the snap ring pliers.
    3. Connect the connector (C).
    4. Install the holders (D).

Fig. 27: Identifying Field Coil, Snap Ring, Connector, Holders And Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. A/C Compressor Rotor Pulley
    1. Install the rotor pulley (A).

        NOTE: Be careful not to damage the rotor pulley or the A/C compressor.

    2. Install the snap ring (B) with the snap ring pliers.

GETtheMANUALS.org

Fig. 28: Identifying Rotor Pulley And Snap Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. A/C Compressor Armature Plate
    1. Install the armature plate (A) and the shim(s) (B), taking care not to lose the shim(s). If the clutch needs adjustment, increase or decrease the number and thickness of shims as necessary, then reinstall the armature plate, and recheck its clearance.

NOTE: **The shims are available in four thicknesses: 0.1 mm, 0.2 mm, 0.4 mm, and 0.5 mm.**

Fig. 29: Identifying Armature Plate And Shim(S)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the center nut while holding the armature plate (A) with the A/C clutch holder (B).

GETtheMANUALS.org

Fig. 30: Installing Center Nut While Holding Armature Plate With A/C Clutch Holder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. A/C Compressor Clutch - Check
    1. Check the armature plate for discoloration, peeling, or other damage. If there is damage, replace the clutch set.
    2. Check the rotor pulley bearing play and drag by rotating the rotor pulley by hand. Also check for grease leakage from the bearing. Replace the clutch set with a new one if it is noisy, has excessive play/drag, or has bearing grease contamination on the clutch faces.

NOTE: **The rotor pulley and the armature plate were mated at the factory by a burnishing operation. Always replace the rotor pulley and the plate as a set. Replacing only one part of the clutch set will cause clutch slippage.**

Fig. 31: Checking Rotor Pulley Bearing Play And Drag By Rotating Rotor Pulley

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Measure the clearance between the rotor pulley (A) and the armature plate (B) all the way around. If the clearance is not within specified limits, remove the armature plate and add or remove shims as needed to increase or decrease clearance.

   Clearance: 0.35-0.65 mm (0.014-0.025 in)

   NOTE: The shims are available in four thicknesses: 0.1 mm, 0.2 mm, 0.4 mm, and 0.5 mm.

Fig. 32: Measuring Clearance Between Rotor Pulley And Armature Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Check for continuity between the A/C compressor clutch connector terminals No. 2 and No. 3. If there is no continuity, replace the thermal protector.

   NOTE: The thermal protector will have no continuity above about 252 to 262 °F (122 to 128 °C). When the temperature drops below about 241 to 219 °F (116 to 104 °C), the thermal protector will have continuity.

GETtheMANUALS.org

Fig. 33: Checking For Continuity Between A/C Compressor Clutch Connector Terminals No. 2 And No. 3
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Disconnect the connector (A).
6. Measure the resistance of the field coil. If resistance is not within specifications, replace the field coil.

Field Coil Resistance: 3.35-3.65 ohms at 68 °F (20 °C)

Fig. 34: Measuring Resistance Of Field Coil
Courtesy of AMERICAN HONDA MOTOR CO., INC.

A/C REFRIGERANT LEAK CHECK

	Leak Detector TIFZX-1(1)
	OPTIMAX Jr. A/C Leak Detection Kit TRP124893(1)
(1) These tools are available through the Honda Tool and Equipment Program; call 888-424-6857	

TEST

CAUTION:

- **Air conditioning refrigerant or lubricant vapor can irritate your eyes,**

GETtheMANUALS.org

nose, or throat.

- **Be careful when connecting service equipment.**
- **Do not breathe refrigerant or vapor.**
- **Do not operate the leak detector near flammable vapors. Its sensor operates at high temperatures, and could ignite the vapors, resulting in personal injury and/or damage to the equipment.**

NOTE:

- **If an accidental system discharge occurs, ventilate the work area before resuming service.**
- **Additional health and safety information may be obtained from the refrigerant and lubricant manufacturers.**
- **Check the system for leaks using an R-134a refrigerant leak detector with an accuracy of 14 g (0.5 oz) per year or better.**

1. R-134a Refrigerant Recovery/Recycling/Charging Station - Connection
    1. Connect an R-134a refrigerant recovery/recycling/charging station (A) to the high-pressure service port (B) and the low-pressure service port (C), as shown, following the equipment manufacturer's instructions.

Fig. 35: Connecting R-134A Refrigerant Recovery/Recycling/Charging Station To High-

GETtheMANUALS.org

<u>Pressure Service Port And Low-Pressure Service Port</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. A/C Refrigerant - Recovery
    1. Recover the refrigerant from the A/C system.
    2. Measure the amount of refrigerant oil removed from the A/C system after the recovery process is completed. Be sure to put the same amount of new refrigerant oil back into the A/C system before charging.
3. A/C System Evacuation
    1. Evacuate the system. The vacuum pump should run for a minimum of 30 minutes to eliminate all moisture from the system. When the suction gauge reads -93.3 kPa (-700 mmHg, - 27.55 inHg) for at least 30 minutes, close all valves, and turn off the vacuum pump.
    2. If the suction gauge dose not reach approximately -93.3 kPa (-700 mmHg, -27.55 inHg) in 15 minutes, there is probably a large leak in the system. Partially charge the system, and check for leaks.
4. A/C Refrigerant - Charging
    1. Charge the system with the specified amount of R-134a refrigerant. Do not overcharge the system; the A/C compressor will be damaged.

       Select the appropriate units of measure for your refrigerant charging station.

       Refrigerant Capacity:

       385 to 435 g

       13.6 to 15.4 oz

       0.385 to 0.435 kg

       0.849 to 0.959 lbs

5. A/C Refrigerant - Leak Check

Leak Detector Usage Tips (Refer to the Operator's Manual for complete operating instructions)

- Position the vehicle in a wind-free work area. This will aid in detecting small leaks.
- When using the leak detector for the first time, allow it to warm up for 2 minutes with the probe in a clean atmosphere. This lets the temperature sensor in the detector stabilize.
- The calibration check should be done in the "Search 2" mode. Once that is done, the other check modes do not need calibrating.
- When leak checking through the HVAC module drain hose, avoid drawing water into the probe. Water can damage the internal pump and sensor.
- Avoid creasing the flexible probe extension. Creases can restrict air flow and give false readings.
- Because the detector recalibrates itself for ambient gases, it may be necessary to move the detector

GETtheMANUALS.org

away from the leak to clear the sensor. Once the sensor has cleared, recheck the suspected leak.

- When removing the clear probe tip, be careful not to lose the flow ball.
- R-134a is heavier than air; always check below and to the sides of all potential leak sources.
- Halogen leak detectors are sensitive to chemicals: windshield washing solutions, solvents/cleaners, and some vehicle adhesives. Keep these chemicals out of the area when doing leak detection.

Fluorescent Dye Usage Tips

- Use only Tracer-Stick single dose fluorescent dye capsules from Tracerline®. Other dyes contain solvents that may contaminate the refrigerant oil, leading to component failure.
- Adding excessive amounts of dye can damage the A/C compressor.
- PAG oil is water soluble, so condensation on the evaporator core or the refrigerant lines may wash the PAG oil and fluorescent dye away from the actual leak. Condensation may also carry dye through the HVAC module drain.
- After checking and repairing leaks, thoroughly clean any residual dye from the areas where leaks were found. Use GLO-AWAY dye cleaner, from Tracerline®, and hot water to remove the dye (follow the instructions on the bottle). Residual dye stains can cause misdiagnosis of any future A/C system leaks.
- If any refrigerant dye contacts an exterior paint surface, remove it by doing this:
  - Carefully wash the affected surfaces to remove any dirt, and to prevent paint scratching.
  - Mix water and isopropyl alcohol in a 50/50 mixture. Soak a soft 100 % cotton towel with the water/alcohol mixture, and place the cloth on the affected areas to remove the dye.
  - After removing the dye with the water/alcohol-soaked cloth, carefully wash the affected areas, and check that there is no remaining dye.

1. With the engine OFF, use a halogen leak detector first to detect the leak source. Follow a continuous path in order to ensure that you will not miss any possible leaks. Test the following areas of the system for leaks:

Possible Leak Area	Diagnostic Procedure with the Leak Detector	Notes
Service ports	• Check the service ports with caps installed • If the detector "sniffs" a leak, use fluorescent dye to confirm it	When capping the service ports, ensure that the seals on the port caps are in place, and that the caps are tight. The caps are used as the final seals in the system
A/C condenser	If the detector "sniffs" a leak, use fluorescent dye to confirm it	• Check for joints or connections coated with oily dust • Check for damaged and corroded areas • Check all fittings, couplings, brazed/welded areas and areas around attachment points • Move the probe slowly (1 in/second or less), and keep it within 1/4 in of the component being checked. This maximizes the chance of

GETtheMANUALS.org

		detecting a leak • If you detect a leak, blow compressed air over the area, then recheck for leaks. For large leaks, clearing the area with compressed air may help you pinpoint the leak source
Evaporator	• Check at the evaporator drain hose • Check at the passenger's side vent and turn the blower on at low speed	
A/C lines	• Wiggle the rubber hoses when checking crimped metal ends • If the detector "sniffs" a leak, use fluorescent dye to confirm it	• Check all fittings, couplings, pressure switches, brazed/welded areas, and areas around attachment points on A/C lines and components • Check for damaged and corroded areas • Move the probe slowly (1 in/second or less), and keep it within 1/4 in of the component being checked. This maximizes the chance of detecting a leak

2. Close the quick coupler valves, then disconnect the quick couplers from the vehicle service ports.
3. Attach the universal connect set, from the Optimax Jr. Leak Detection Kit, to the service valve fitting. Close the control valve (the black knob on the connect set).
4. Attach the charging station low pressure hose quick coupler to the service valve fitting, and open the quick coupler valve. Evacuate the connect set using the charging station vacuum pump, then close the quick coupler valve.
5. Detach the universal connect set, and install a Tracer-Stick® dye capsule between the connect set and the service valve fitting (see the manufacturer's instructions for more detail).
6. Attach the quick coupler on the universal connect set to the low pressure service port on the vehicle. Open the charging station low pressure hose quick coupler valve, but do not open the control valve.
7. Start the engine, and set the A/C system to maximum cooling. Open the control valve to let refrigerant and the dye enter the A/C system through the low pressure service port. Close the control valve when the Tracer-Stick® dye capsule is empty.
8. Run the engine and A/C system for 15 minutes to thoroughly circulate the dye. Then shut the engine off, and inspect the following areas of the system for leaks:

NOTE:

- **Check for leaks in a dark work area, and use the UV light and the special glasses from the leak check kit. Other UV lights may not work well with the Tracer-Stick® dye.**
- **Small leaks may take up to 1 week of vehicle operation (with normal A/C use) to become visible.**

GETtheMANUALS.org

Possible Leak Area	Diagnostic Procedure with Fluorescent Dye
Service ports	If a leak is found, replace the cap/o-ring seal or A/C line as needed
A/C lines	• Use a permanent marker pen to circle the leak area • If a leak is found, remove and replace the A/C line
A/C condenser	• If a leak is found, remove the A/C condenser • Determine whether leak is in the A/C condenser or the receiver/dryer • Use a permanent marker pen to circle the leak area • Replace either the receiver/dryer, or the A/C condenser, depending upon which is leaking
A/C compressor	• Check for leaks at all of the A/C compressor joints, the clutch center, the A/C compressor front housing bolts, and the scroll bolts on the back of the A/C compressor • If a leak is found, use a permanent marker pen to circle the leak area • If the A/C compressor relief valve appears to be leaking, determine whether the leak is coming from the relief valve, or the joint between the A/C compressor casing and the valve. If the leak is from the relief valve, check the A/C system pressures, and refer to the pressure test table in the A/C system test. If the leak is from the casing/valve joint, replace the A/C compressor relief valve • If the leak is coming from the suction hose and/or discharge hose fittings on the A/C compressor, clean the A/C fittings and replace the suction/discharge fitting O-rings • For all other A/C compressor leaks, remove and replace the A/C compressor
Evaporator	• Start checking for evaporator leaks by illuminating the evaporator drain tube area • If a leak is found, remove the evaporator core • Determine whether leak is from evaporator or expansion valve • Use a permanent marker pen to circle leak area • Replace the expansion valve, or the evaporator core, depending upon which is leaking

A/C REFRIGERANT OIL REPLACEMENT

SPECIAL TOOL REQUIRED DESCRIPTION

Image	Description/Tool Number
	Oil Injector Tool Robinair ROB16256(1),

GETtheMANUALS.org

	commercially available
(1) Available through the Honda Tool and Equipment Program; call 888	

REPLACEMENT

1. A/C Refrigerant Oil - Replacement

   Recommended PAG oil: SP-10

   P/N 38897-P13-A01AH: 120 mL (4 fl oz)

   It is important to have the correct amount of refrigerant oil in the A/C system to ensure proper lubrication of the A/C compressor. T oil damages the A/C compressor; too much oil reduces the cooling capacity of the system, and can produce high vent temperatures.

   - To avoid contamination, do not return the oil to the container once dispensed, and never mix it with other refrigerant oils.
   - Immediately after using the oil, reinstall the cap on the container, and seal it to avoid moisture absorption.
   - Do not spill the refrigerant oil on the vehicle; it may damage the paint; if it gets on the paint, wash it off immediately.

   Add the recommended refrigerant oil in the amount listed if you replace any of the following parts.

A/C condenser (including dryer desiccant).....	25 mL (5/6 fl oz)
Evaporator.....	40 mL (1 1/3 fl oz)
Line or hose.....	10 mL (1/3 fl oz)
Dryer desiccant.....	10 mL (1/3 fl oz)
Leakage repair.....	25 mL (5/6 fl oz)
A/C compressor.....	Since the oil separator is equipped inside the A/C compressor for this vehicle, oil drainage is unnecessary at the time of A/C compressor replacement.

A/C REFRIGERANT RECOVERY

PROCEDURE

GETtheMANUALS.org

CAUTION:

- **Air conditioning refrigerant or lubricant vapor can irritate your eyes, nose, or throat.**
- **Be careful when connecting service equipment.**
- **Do not breathe refrigerant or vapor.**

NOTE:

- **If accidental system discharge occurs, ventilate the work area before resuming service.**
- **Additional health and safety information may be obtained from the refrigerant and lubricant manufacturers.**

1. R-134a Refrigerant Recovery/Recycling/Charging Station - Connection
    1. Connect an R-134a refrigerant recovery/recycling/charging station (A) to the high-pressure service port (B) and the low-pressure service port (C), as shown, following the equipment manufacturer's instructions.

Fig. 36: Connecting R-134A Refrigerant Recovery/Recycling/Charging Station To High-Pressure Service Port And Low-Pressure Service Port
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. A/C Refrigerant - Recovery
    1. Recover the refrigerant from the A/C system.

GETtheMANUALS.org

2. Measure the amount of refrigerant oil removed from the A/C system after the recovery process is completed. Be sure to put the same amount of new refrigerant oil back into the A/C system before charging.

2. A/C Refrigerant - Recovery
    1. Recover the refrigerant from the A/C system.
    2. Measure the amount of refrigerant oil removed from the A/C system after the recovery process is completed. Be sure to put the same amount of new refrigerant oil back into the A/C system before charging.
3. A/C System Evacuation
    1. Evacuate the system. The vacuum pump should run for a minimum of 30 minutes to eliminate all moisture from the system. When the suction gauge reads -93.3 kPa (-700 mmHg, - 27.55 inHg) for at least 30 minutes, close all valves, and turn off the vacuum pump.
    2. If the suction gauge dose not reach approximately -93.3 kPa (-700 mmHg, -27.55 inHg) in 15 minutes, there is probably a large leak in the system. Partially charge the system, and check for leaks.
4. A/C Refrigerant - Charging
    1. Charge the system with the specified amount of R-134a refrigerant. Do not overcharge the system; the A/C compressor will be damaged.

        Select the appropriate units of measure for your refrigerant charging station.

GETtheMANUALS.org

Refrigerant Capacity:

385 to 435 g

13.6 to 15.4 oz

0.385 to 0.435 kg

0.849 to 0.959 lbs

5. A/C Refrigerant - Leak Check

Leak Detector Usage Tips (Refer to the Operator's Manual for complete operating instructions)

- Position the vehicle in a wind-free work area. This will aid in detecting small leaks.
- When using the leak detector for the first time, allow it to warm up for 2 minutes with the probe in a clean atmosphere. This lets the temperature sensor in the detector stabilize.
- The calibration check should be done in the "Search 2" mode. Once that is done, the other check modes do not need calibrating.
- When leak checking through the HVAC module drain hose, avoid drawing water into the probe. Water can damage the internal pump and sensor.
- Avoid creasing the flexible probe extension. Creases can restrict air flow and give false readings.
- Because the detector recalibrates itself for ambient gases, it may be necessary to move the detector away from the leak to clear the sensor. Once the sensor has cleared, recheck the suspected leak.
- When removing the clear probe tip, be careful not to lose the flow ball.
- R-134a is heavier than air; always check below and to the sides of all potential leak sources.
- Halogen leak detectors are sensitive to chemicals: windshield washing solutions, solvents/cleaners, and some vehicle adhesives. Keep these chemicals out of the area when doing leak detection.

Fluorescent Dye Usage Tips

- Use only Tracer-Stick single dose fluorescent dye capsules from Tracerline®. Other dyes contain solvents that may contaminate the refrigerant oil, leading to component failure.
- Adding excessive amounts of dye can damage the A/C compressor.
- PAG oil is water soluble, so condensation on the evaporator core or the refrigerant lines may wash the PAG oil and fluorescent dye away from the actual leak. Condensation may also carry dye through the HVAC module drain.
- After checking and repairing leaks, thoroughly clean any residual dye from the areas where leaks were found. Use GLO-AWAY dye cleaner, from Tracerline®, and hot water to remove the dye (follow the instructions on the bottle). Residual dye stains can cause misdiagnosis of any future A/C system leaks.
- If any refrigerant dye contacts an exterior paint surface, remove it by doing this:
    - Carefully wash the affected surfaces to remove any dirt, and to prevent paint scratching.
    - Mix water and isopropyl alcohol in a 50/50 mixture. Soak a soft 100 % cotton towel with the

GETtheMANUALS.org

water/alcohol mixture, and place the cloth on the affected areas to remove the dye.

- After removing the dye with the water/alcohol-soaked cloth, carefully wash the affected areas, and check that there is no remaining dye.

1. With the engine OFF, use a halogen leak detector first to detect the leak source. Follow a continuous path in order to ensure that you will not miss any possible leaks. Test the following areas of the system for leaks:

Possible Leak Area	Diagnostic Procedure with the Leak Detector	Notes
Service ports	• Check the service ports with caps installed • If the detector "sniffs" a leak, use fluorescent dye to confirm it	When capping the service ports, ensure that the seals on the port caps are in place, and that the caps are tight. The caps are used as the final seals in the system
A/C condenser	If the detector "sniffs" a leak, use fluorescent dye to confirm it	• Check for joints or connections coated with oily dust • Check for damaged and corroded areas • Check all fittings, couplings, brazed/welded areas and areas around attachment points • Move the probe slowly (1 in/second or less), and keep it within 1/4 in of the component being checked. This maximizes the chance of detecting a leak • If you detect a leak, blow compressed air over the area, then recheck for leaks. For large leaks, clearing the area with compressed air may help you pinpoint the leak source
Evaporator	• Check at the evaporator drain hose • Check at the passenger's side vent and turn the blower on at low speed	
A/C lines	• Wiggle the rubber hoses when checking crimped metal ends • If the detector "sniffs" a leak, use fluorescent dye to confirm it	• Check all fittings, couplings, pressure switches, brazed/welded areas, and areas around attachment points on A/C lines and components • Check for damaged and corroded areas • Move the probe slowly (1 in/second or less), and keep it within 1/4 in of the component being checked. This maximizes the chance of detecting a leak

2. Close the quick coupler valves, then disconnect the quick couplers from the vehicle service ports.

GETtheMANUALS.org

3. Attach the universal connect set, from the Optimax Jr. Leak Detection Kit, to the service valve fitting. Close the control valve (the black knob on the connect set).
4. Attach the charging station low pressure hose quick coupler to the service valve fitting, and open the quick coupler valve. Evacuate the connect set using the charging station vacuum pump, then close the quick coupler valve.
5. Detach the universal connect set, and install a Tracer-Stick® dye capsule between the connect set and the service valve fitting (see the manufacturer's instructions for more detail).
6. Attach the quick coupler on the universal connect set to the low pressure service port on the vehicle. Open the charging station low pressure hose quick coupler valve, but do not open the control valve.
7. Start the engine, and set the A/C system to maximum cooling. Open the control valve to let refrigerant and the dye enter the A/C system through the low pressure service port. Close the control valve when the Tracer-Stick® dye capsule is empty.
8. Run the engine and A/C system for 15 minutes to thoroughly circulate the dye. Then shut the engine off, and inspect the following areas of the system for leaks:

NOTE:

- **Check for leaks in a dark work area, and use the UV light and the special glasses from the leak check kit. Other UV lights may not work well with the Tracer-Stick® dye.**
- **Small leaks may take up to 1 week of vehicle operation (with normal A/C use) to become visible.**

Possible Leak Area	Diagnostic Procedure with Fluorescent Dye
Service ports	If a leak is found, replace the cap/o-ring seal or A/C line as needed
A/C lines	• Use a permanent marker pen to circle the leak area • If a leak is found, remove and replace the A/C line
A/C condenser	• If a leak is found, remove the A/C condenser • Determine whether leak is in the A/C condenser or the receiver/dryer • Use a permanent marker pen to circle the leak area • Replace either the receiver/dryer, or the A/C condenser, depending upon which is leaking
A/C compressor	• Check for leaks at all of the A/C compressor joints, the clutch center, the A/C compressor front housing bolts, and the scroll bolts on the back of the A/C compressor • If a leak is found, use a permanent marker pen to circle the leak area • If the A/C compressor relief valve appears to be leaking, determine whether the leak is coming from the relief valve, or the joint between the A/C compressor casing and the valve. If the leak is from the relief valve, check the A/C system pressures, and refer to the pressure test table in the A/C system test. If the leak is from the casing/valve joint, replace the A/C compressor

GETtheMANUALS.org

	relief valve • If the leak is coming from the suction hose and/or discharge hose fittings on the A/C compressor, clean the A/C fittings and replace the suction/discharge fitting O-rings • For all other A/C compressor leaks, remove and replace the A/C compressor
Evaporator	• Start checking for evaporator leaks by illuminating the evaporator drain tube area • If a leak is found, remove the evaporator core • Determine whether leak is from evaporator or expansion valve • Use a permanent marker pen to circle leak area • Replace the expansion valve, or the evaporator core, depending upon which is leaking

6. A/C System - Test
    1. Insert a thermometer (A) in the center vent.
    2. Place a hygro-thermometer (B) near the blower unit's recirculation inlet duct.
    3. Test conditions:
        - Move the vehicle out of direct sunlight and let it cool down to the surrounding (ambient) temperature. If necessary, wash the vehicle to cool it down more quickly.
        - The blower intake temperature must be at least 68°F (20°C).
        - Open the hood.
        - Open the front doors.
        - Start the engine.
        - Set the temperature control dial or temperature control button to MAX COOL, the mode control button to VENT, and the recirculation control button to RECIRCULATE.
        - Turn the A/C button on and the fan control dial or fan control button to Max.
        - Run the engine at 1, 500 rpm.
        - No driver or passengers in vehicle.
    4. Inspect the A/C components for the following conditions:
        - A/C compressor clutch not engaged.
        - Abnormal frost areas.
        - Unusual noises.

    If you observe any of these conditions, refer to the Symptom Troubleshooting Index.

GETtheMANUALS.org

Fig. 39: Inserting Thermometer In Center Vent
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. After running the air conditioning for 10 minutes under the above test conditions, read the delivery temperature from the thermometer in the center vent, the intake temperature near the blower unit, and the discharge (high) and suction (low) pressures on the A/C gauges.
6. To complete the vent (delivery)/intake temperature chart:
   - Mark the vent (delivery) temperature on the vertical line.
   - Mark the intake temperature on the bottom line.
   - Draw a vertical line from the intake temperature mark.
   - Draw a horizontal line from the vent (delivery) temperature mark until it intersects the vertical line.

NOTE: **The vent temperature and intake temperature should intersect in the shaded area. Any measurements outside the line may indicate the need for further inspection.**

GETtheMANUALS.org

Fig. 40: Intake Temperature And Vent (Delivery) Temperature Graph
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. To complete the high side (discharge) pressure/intake temperature chart:
   - Mark the high side (discharge) pressure on the vertical line.
   - Mark the intake temperature on the bottom line.
   - Draw a vertical line from the intake temperature mark.
   - Draw a horizontal line from the high side (discharge) pressure mark until it intersects the vertical line.

NOTE: **The high side pressure and intake temperature should intersect in the shaded area. Any measurements outside the line may indicate the need for further inspection.**

GETtheMANUALS.org

Fig. 41: Intake Temperature And High Side (Discharge) Pressure Graph
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. To complete the low side (suction) pressure/intake temperature chart:
   - Mark the low side (suction) pressure along the vertical line.
   - Mark the intake temperature along the bottom line.
   - Draw a vertical line from the intake temperature mark.
   - Draw a horizontal line from the low side (suction) pressure mark until it intersects the vertical line.

NOTE: **The low side pressure and intake temperature should intersect in the shaded area. Any measurements outside the line may indicate the need for further inspection.**

GETtheMANUALS.org

Fig. 42: Intake Temperature And Low Side (Suction) Pressure Graph
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Glove Box - Move
    1. Install the glove box (A). Make sure the glove box stops (B) snap into place securely.
    2. Install the glove box damper hook (C).

GETtheMANUALS.org

Fig. 43: Installing Glove Box Damper Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

A/C SYSTEM CONTAMINATION INSPECTION

INSPECTION

1. A/C System - Contamination Inspection
    1. If A/C compressor failure is diagnosed, always use this inspection to check the extent of contamination in the A/C system.

GETtheMANUALS.org

Fig. 44: Identifying Discharge Hose, Suction Hose, Receiver Line And A/C Lines
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the discharge hose (A) from the A/C compressor. Then, swab inside the discharge hose and A/C compressor discharge cotton swab.
   - If no metal, dark gray or black residue is found, no contamination is present from the A/C compressor. Replace only the A compressor.
   - If metal, dark gray or black residue is found, go to step 3.
3. Remove the suction hose (D) from the A/C compressor. Then, swab inside the suction hose and A/C compressor suction port w swab.
   - If no metal, dark gray or black residue is found, go to step 4.
   - If metal, dark gray or black residue is found, replace the components listed in Repair Procedure C.
4. Remove the receiver line (B) from the A/C condenser outlet. Then, swab inside the receiver line and A/C condenser outlet with swab.
   - If no metal, dark gray or black residue is found, go to step 6.
   - If metal, dark gray or black residue is found, go to step 5.
5. Remove the A/C lines (C) from the expansion valve. Then, swab inside the expansion valve and the A/C lines with a cotton sw

GETtheMANUALS.org

- If no metal, dark gray or black residue is found, replace the components listed in Repair Procedure B.
- If metal, dark gray or black residue is found, replace the components listed in Repair Procedure C.

6. Remove the discharge hose (A) from the A/C condenser inlet. Then, swab inside the discharge hose and A/C condenser inlet w
   - If no metal, dark gray or black residue is found, replace the components listed in Repair Procedure A.
   - If metal, dark gray or black residue is found, replace the components listed in Repair Procedure B.

REPAIR PROCEDURE LIST

Repair Procedure	Replace Components
A	• Compressor • Discharge hose • Receiver/Dryer • O-rings from removed components
B	• Compressor • Discharge hose • Receiver line and A/C lines • Condenser • Receiver/Dryer • O-rings from removed components
C	• Compressor • Condenser • Receiver/Dryer • Expansion valve • Evaporator • All A/C hoses and lines • O-rings from removed components

A/C SYSTEM EVACUATION

SPECIAL TOOL REQUIRED DESCRIPTION

Image	Description/Tool Number

GETtheMANUALS.org

	Compact Electronic Vacuum Gauge Robinair ROB14777[1], commercially available
[1] Available through the Honda Tool and Equipment Program; call 888-424-6857	

PROCEDURE

CAUTION:

- **Air conditioning refrigerant or lubricant vapor can irritate your eyes, nose, or throat.**
- **Be careful when connecting service equipment.**
- **Do not breathe refrigerant or vapor.**

NOTE:

- **If accidental system discharge occurs, ventilate the work area before resuming service.**
- **Additional health and safety information may be obtained from the refrigerant and lubricant manufacturers.**

When an A/C System has been opened to the atmosphere, such as during installation or repair, it must be evacuated using an R-134a refrigerant recovery/recycling/charging station. If the system has been open for several days, the receiver/dryer should be replaced. Recover the refrigerant, if any, from the A/C system, and the system should be evacuated for several hours.

NOTE:

- **Do not allow moisture to contaminate the A/C system oil. Moisture in the oil is difficult to remove, and it can damage the A/C compressor.**
- **Using a compact electronic vacuum gauge may decrease the required evacuation time because you can measure actual moisture level with this tool.**

A more efficient way to measure moisture removal is with a special tool called a compact electronic vacuum gauge, measuring vacuum levels in microns.

Connect the tool according to the manufacturers instructions and allow the vacuum pump to run until the gauge reads 500 microns.

GETtheMANUALS.org

Shut off and isolate the vacuum pump, then observe the gauge reading:

- If the vacuum level remains stable for at least three minutes, all moisture in the system has been removed.
- A slow increase in the micron reading means there is still moisture boiling out of the system. Restart the vacuum pump and continue evacuating.
- A quick increase of micron levels indicates a leak is present in the system or your service equipment. Determine the cause and correct the leak before continuing.

1. R-134a Refrigerant Recovery/Recycling/Charging Station - Connection
    1. Connect an R-134a refrigerant recovery/recycling/charging station (A) to the high-pressure service port (B) and the low-pressure service port (C), as shown, following the equipment manufacturer's instructions.

Fig. 45: Connecting R-134A Refrigerant Recovery/Recycling/Charging Station To High-Pressure Service Port And Low-Pressure Service Port
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. A/C Refrigerant - Recovery
    1. Recover the refrigerant from the A/C system.
    2. Measure the amount of refrigerant oil removed from the A/C system after the recovery process is completed. Be sure to put the same amount of new refrigerant oil back into the A/C system before charging.
3. A/C System Evacuation

GETtheMANUALS.org

1. Evacuate the system. The vacuum pump should run for a minimum of 30 minutes to eliminate all moisture from the system. When the suction gauge reads -93.3 kPa (-700 mmHg, - 27.55 inHg) for at least 30 minutes, close all valves, and turn off the vacuum pump.
2. If the suction gauge dose not reach approximately -93.3 kPa (-700 mmHg, -27.55 inHg) in 15 minutes, there is probably a large leak in the system. Partially charge the system, and check for leaks.

A/C SYSTEM INSPECTION

INSPECTION

1. A/C System Inspection

NOTE: For A/C system noise, go to the A/C SYSTEM NOISE CHECK.

Before troubleshooting any problem with the A/C system, other than noise, do the following:

1. Check that the HVAC air intake plenum at the base of the windshield is not blocked by leaves or debris. Remove any blockage.
2. Check for kinks or sharp bends in the A/C lines and hoses (which can greatly reduce system performance). If any of the A/C lines and hoses are kinked or bent, replace them.
3. Inspect the A/C components, the pressure lines, and the hoses for stains that may indicate a refrigerant or an A/C compressor oil leak. If there is any indication of leaks, do the Refrigerant Leak Check to confirm the leak(s).
4. Inspect the drive belt for physical damage or signs of slippage. If the drive belt is damaged or shows signs of slippage, replace it and recheck.

Fig. 46: Inspecting A/C Components, Pressure Lines, And Hoses For Stains
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Check the A/C condenser (A) for material clogging the fins (dirt, insects, etc.). If the A/C condenser is clogged or restricted, carefully clean any material from the A/C condenser fins with water and detergent. If deeper cleaning is required, clean the fins with HondaBrite cleaner. Do not perform pressure test until the A/C condenser is completely dry.
6. Check the A/C condenser for fin damage (bent fins). If any of the A/C condenser fins are bent, try to comb them straight. Do the Refrigerant Leak Check to check for leaks if there is visible damage to the A/C condenser. If the A/C condenser is leaking or the fins cannot be straightened, replace the A/C condenser.

GETtheMANUALS.org

7. Check the dust and pollen filter. If the dust and pollen filter is clogged or restricted, replace it.
8. Check for HVAC DTCs using the Self-Diagnostic Function. If there are any DTCs, go to the appropriate troubleshooting.
9. Start the engine, turn the A/C system on, and allow it to run for a few minutes and reach stable operation.

Fig. 47: Identifying A/C Condenser
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Check that the A/C operates at each position of the fan control dial or fan control button (except OFF). If the A/C does not operate at all fan control dial or fan control button positions, refer to the symptom troubleshooting.
11. Check that the A/C compressor clutch armature plate (A) is rotating at the same speed as the rotor pulley and is engaging. If the A/C compressor clutch does not engage, go to the **A/C COMPRESSOR CLUTCH CIRCUIT TROUBLESHOOTING**.
12. Check that the A/C condenser fan (B) and the radiator fan (C) operate when the A/C compressor clutch is engaged and blow air toward the engine compartment. If one or both of the fans is not working properly, refer to the symptom troubleshooting.
13. Check that the engine idle speed is correctly maintained when the A/C is switched on and off, (A/C compressor clutch is engaged and disengaged). If the idle speed increases more than 100 rpm when the A/C compressor engages, confirm that the A/C compressor is the cause of the idle speed increase. Replace the A/C compressor, if necessary.

GETtheMANUALS.org

Fig. 48: Identifying A/C Compressor Clutch Armature Plate, A/C Condenser Fan And Radiator Fan
Courtesy of AMERICAN HONDA MOTOR CO., INC.

A/C SYSTEM NOISE CHECK

CHECK

1. A/C System - Noise Check

CAUTION:

- **Air conditioning refrigerant or lubricant vapor can irritate your eyes, nose, or throat.**
- **Be careful when connecting service equipment.**
- **Do not breathe refrigerant or vapor.**

The A/C system noise check will help you determine the source of abnormal A/C system noise.

NOTE:

- **If an accidental system discharge occurs, ventilate the work area before resuming service.**
- **Additional health and safety information may be obtained from the refrigerant and lubricant manufacturers.**
- **Identify the conditions when the noise occurs. The weather, the vehicle speed, the vehicle being in gear or in neutral, the engine temperature, or other conditions may be factors in determining the noise source.**
- **Do the A/C system inspection, and correct any problems found prior to diagnosing abnormal noises.**
- **Abnormal A/C noises can be misleading. For example, a sound similar to a failed bearing may be caused by loose fasteners, loose mounting brackets, or a faulty A/C compressor clutch assembly.**

GETtheMANUALS.org

1. Inspect the air inlet grille in the cowl cover for debris. If debris is present, remove it.
2. Sit inside the vehicle, close the doors and windows, and turn the ignition switch to ON (II), but do not start the engine. Cycle the HVAC system through all blower speeds and all air distribution modes to determine where and when the noise occurs.
3. Operate the blower at each speed with the engine and A/C off, and check for unusual noises and excessive vibration. If noise and/or vibration are present, do the following checks:
    - 1. If the noise or vibration occurs only in a specific mode or setting, then check these items:
        - Operation of the mode control motor, door, and linkage.
        - Operation of the air mix control motor, door, and linkage.
        - Operation of the recirculation control motor, door, and linkage.
    - 2. If there is a squeaking or chirping noise, but no unusual vibration, replace the blower motor.
    - 3. Remove the blower unit, and check for foreign material (leaves or twigs, for example) on the blower motor and fan. If foreign material is present, remove it, and recheck for noise. If you do not find any foreign material, remove the blower motor, and check these items:
        - Check if the fan blades are cracked or broken.
        - Make sure the fan retainer is tight.
        - Inspect the fan alignment on the blower motor shaft.

    Replace the blower motor if any problems are present.

4. Set up the vehicle for the running A/C checks:
    - Select a quiet area for testing.
    - Apply the parking brake.
    - Shift the vehicle in P or N (A/T), or in Neutral (M/T).
    - Start the engine.
    - Set the temperature control dial or temperature control button to MAX COOL.
    - Set the mode control button to VENT.
    - Set the fan control dial or fan control button to minimum (but not OFF).
    - Turn the air conditioning button ON.

    Switch the A/C compressor on and off several times to clearly identify the sound during A/C compressor operation. Listen to the noise while the A/C compressor clutch is engaged and disengaged. Probe the A/C system with a stethoscope to pinpoint the noise.

    NOTE: If the noise does not change when the A/C compressor clutch engages or disengages, the noise may be caused by an engine-related component. Probe the engine area with a stethoscope to pinpoint the noise.

5. Turn the ignition switch to LOCK (0), and check the drive belt for excessive wear, oil contamination, improper routing, or a faulty belt tensioner. Correct any problems found. Start the

GETtheMANUALS.org

engine, run the A/C system, and check if the noise is coming from the drive belt, the belt tensioner or any of the pulleys. Repair or replace any faulty components.

6. Listen for noises coming from the A/C lines, the A/C hoses, the A/C condenser, the evaporator, the receiver/dryer, or the expansion valve, and check these items:
   - Noises caused by A/C components touching other components or the body. Reroute or insulate the A/C component(s) as needed, and recheck for noise.
   - Loose, damaged or excessively worn A/C components or mounting hardware. Repair or replace the faulty component (s) or hardware, and recheck for noise.
   - A moaning noise coming from the A/C suction line. If there is a moaning noise, check the system refrigerant charge. If the refrigerant charge is OK, replace the receiver/dryer.
7. Check the operation of the A/C compressor clutch:
   - Make sure A/C compressor clutch engages without slipping. If the clutch does not engage, troubleshoot the A/C compressor clutch circuit. If the A/C compressor clutch slips, replace the A/C compressor clutch assembly. And if there is a leak from the shaft seal when the A/C compressor clutch slips, replace the A/C compressor also.
   - Make sure the A/C compressor clutch disengages. If the clutch does not disengage, do the A/C compressor clutch check. If the A/C compressor clutch is OK, replace the A/C compressor.
   - Make sure the A/C compressor clutch cycles normally. If the A/C compressor clutch is cycling rapidly, the A/C system is probably low on refrigerant due to a leak. Do the refrigerant leak check. If the refrigerant charge is OK, and there are no leaks, troubleshoot the A/C compressor clutch circuit.
8. Listen with a stethoscope for noises coming from the A/C compressor, and check these items:
   - The noise changes when the A/C compressor clutch disengages. If the noise does not change when the A/C compressor disengages, the noise may be caused by an engine-related component. Probe the engine area with a stethoscope to pinpoint the noise.
   - The A/C system operating pressures are normal. If the system pressures are abnormal, troubleshoot the problem using the pressure test table in the A/C system test. Correct the pressure-related problem(s), and recheck for noise.
   - The A/C compressor hose connections, mounting brackets, and fasteners are in good condition. If any of these components are loose, damaged, or excessively worn, repair or replace the faulty component(s), and recheck for noise. If these components are in good condition, and the noise is still present, replace the A/C compressor.

A/C SYSTEM TEST

SPECIAL TOOL REQUIRED DESCRIPTION

Image	Description/Tool Number

GETtheMANUALS.org

	Big Digit Hygro-Thermometer PYR445703, commercially available
	Throttle Pedal Depressor Tool B240B, commercially available

TEST

CAUTION:

- **Air conditioning refrigerant or lubricant vapor can irritate your eyes, nose, or throat.**
- **Be careful when connecting service equipment.**
- **Do not breathe refrigerant or vapor.**

The A/C system test will help determine if the A/C system is operating within specifications.

NOTE:

- **If accidental system discharge occurs, ventilate the work area before resuming service.**
- **Additional health and safety information may be obtained from the refrigerant and lubricant manufacturers.**

1. A/C System Inspection

NOTE: **For A/C system noise, go to the <u>A/C SYSTEM NOISE CHECK</u>.**

GETtheMANUALS.org

Before troubleshooting any problem with the A/C system, other than noise, do the following:

1. Check that the HVAC air intake plenum at the base of the windshield is not blocked by leaves or debris. Remove any blockage.
2. Check for kinks or sharp bends in the A/C lines and hoses (which can greatly reduce system performance). If any of the A/C lines and hoses are kinked or bent, replace them.
3. Inspect the A/C components, the pressure lines, and the hoses for stains that may indicate a refrigerant or an A/C compressor oil leak. If there is any indication of leaks, do the Refrigerant Leak Check to confirm the leak(s).
4. Inspect the drive belt for physical damage or signs of slippage. If the drive belt is damaged or shows signs of slippage, replace it and recheck.

Fig. 49: Inspecting A/C Components, Pressure Lines, And Hoses For Stains
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Check the A/C condenser (A) for material clogging the fins (dirt, insects, etc.). If the A/C condenser is clogged or restricted, carefully clean any material from the A/C condenser fins with water and detergent. If deeper cleaning is required, clean the fins with HondaBrite cleaner. Do not perform pressure test until the A/C condenser is completely dry.
6. Check the A/C condenser for fin damage (bent fins). If any of the A/C condenser fins are bent, try to comb them straight. Do the Refrigerant Leak Check to check for leaks if there is visible damage to the A/C condenser. If the A/C condenser is leaking or the fins cannot be straightened, replace the A/C condenser.
7. Check the dust and pollen filter. If the dust and pollen filter is clogged or restricted, replace it.
8. Check for HVAC DTCs using the Self-Diagnostic Function. If there are any DTCs, go to the appropriate troubleshooting.
9. Start the engine, turn the A/C system on, and allow it to run for a few minutes and reach stable operation.
10. Check that the A/C operates at each position of the fan control dial or fan control button (except OFF). If the A/C does not operate at all fan control dial or fan control button positions, refer to the symptom troubleshooting.

GETtheMANUALS.org

Fig. 50: Identifying A/C Condenser
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Check that the A/C compressor clutch armature plate (A) is rotating at the same speed as the rotor pulley and is engaging. If the A/C compressor clutch does not engage, go to the **A/C COMPRESSOR CLUTCH CIRCUIT TROUBLESHOOTING**.
12. Check that the A/C condenser fan (B) and the radiator fan (C) operate when the A/C compressor clutch is engaged and blow air toward the engine compartment. If one or both of the fans is not working properly, refer to the symptom troubleshooting.
13. Check that the engine idle speed is correctly maintained when the A/C is switched on and off, (A/C compressor clutch is engaged and disengaged). If the idle speed increases more than 100 rpm when the A/C compressor engages, confirm that the A/C compressor is the cause of the idle speed increase. Replace the A/C compressor, if necessary.

GETtheMANUALS.org

REMOVAL

CAUTION:

- **Air conditioning refrigerant or lubricant vapor can irritate your eyes, nose, or throat.**
- **Be careful when connecting service equipment.**
- **Do not breathe refrigerant or vapor.**

NOTE:

- **If accidental system discharge occurs, ventilate the work area before resuming service.**
- **Additional health and safety information may be obtained from the refrigerant and lubricant manufacturers.**

1. R-134a Refrigerant Recovery/Recycling/Charging Station - Connection
    1. Connect an R-134a refrigerant recovery/recycling/charging station (A) to the high-pressure service port (B) and the low-pressure service port (C), as shown, following the equipment manufacturer's instructions.

Fig. 52: Connecting R-134A Refrigerant Recovery/Recycling/Charging Station To High-Pressure Service Port And Low-Pressure Service Port
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Glove Box - Move

GETtheMANUALS.org

1. Detach the glove box damper hook (A), and release both glove box stops (B) by pushing them in, then let glove box (C) hang down.

Fig. 53: Detaching Glove Box Damper Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TEST

1. A/C System - Test
    1. Insert a thermometer (A) in the center vent.
    2. Place a hygro-thermometer (B) near the blower unit's recirculation inlet duct.
    3. Test conditions:
        - Move the vehicle out of direct sunlight and let it cool down to the surrounding (ambient) temperature. If necessary, wash the vehicle to cool it down more quickly.
        - The blower intake temperature must be at least 68°F (20°C).
        - Open the hood.
        - Open the front doors.
        - Start the engine.
        - Set the temperature control dial or temperature control button to MAX COOL, the mode control button to VENT, and the recirculation control button to RECIRCULATE.
        - Turn the A/C button on and the fan control dial or fan control button to Max.
        - Run the engine at 1, 500 rpm.
        - No driver or passengers in vehicle.

GETtheMANUALS.org

Fig. 54: Inserting Thermometer In Center Vent
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Inspect the A/C components for the following conditions:
   - A/C compressor clutch not engaged.
   - Abnormal frost areas.
   - Unusual noises.

   If you observe any of these conditions, refer to the Symptom Troubleshooting Index.

5. After running the air conditioning for 10 minutes under the above test conditions, read the delivery temperature from the thermometer in the center vent, the intake temperature near the blower unit, and the discharge (high) and suction (low) pressures on the A/C gauges.
6. To complete the vent (delivery)/intake temperature chart:
   - Mark the vent (delivery) temperature on the vertical line.
   - Mark the intake temperature on the bottom line.
   - Draw a vertical line from the intake temperature mark.
   - Draw a horizontal line from the vent (delivery) temperature mark until it intersects the vertical line.

NOTE: **The vent temperature and intake temperature should intersect in the shaded area. Any measurements outside the line may indicate the need for further inspection.**

GETtheMANUALS.org

Fig. 55: Intake Temperature And Vent (Delivery) Temperature Graph
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. To complete the high side (discharge) pressure/intake temperature chart:
   - Mark the high side (discharge) pressure on the vertical line.
   - Mark the intake temperature on the bottom line.
   - Draw a vertical line from the intake temperature mark.
   - Draw a horizontal line from the high side (discharge) pressure mark until it intersects the vertical line.

NOTE: **The high side pressure and intake temperature should intersect in the shaded area. Any measurements outside the line may indicate the need for further inspection.**

GETtheMANUALS.org

Fig. 56: Intake Temperature And High Side (Discharge) Pressure Graph
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. To complete the low side (suction) pressure/intake temperature chart:
   - Mark the low side (suction) pressure along the vertical line.
   - Mark the intake temperature along the bottom line.
   - Draw a vertical line from the intake temperature mark.
   - Draw a horizontal line from the low side (suction) pressure mark until it intersects the vertical line.

NOTE: **The low side pressure and intake temperature should intersect in the shaded area. Any measurements outside the line may indicate the need for further inspection.**

A/C COMPRESSOR RELIEF VALVE REMOVAL AND INSTALLATION

SPECIAL TOOL REQUIRED

Image	Description/Tool Number
	Compact Electronic Vacuum Gauge Robinair ROB14777(1), commercially available
	Leak Detector YGK-H-10PM(1)

GETtheMANUALS.org

	Leak Detector HLD-100(1)
	Leak Detector TIFZX-1(1)
	OPTIMAX Jr. A/C Leak Detection Kit TRP124893(1)

GETtheMANUALS.org

	Big Digit Hygro-Thermometer PYR445703, commercially available
	Throttle Pedal Depressor Tool B240B, commercially available
(1) These tools are available through the Honda Tool and Equipment Program; call 888-424-6857	

REMOVAL

CAUTION:

- **Air conditioning refrigerant or lubricant vapor can irritate your eyes, nose, or throat.**
- **Be careful when connecting service equipment.**
- **Do not breathe refrigerant or vapor.**

NOTE:

- **If accidental system discharge occurs, ventilate the work area before resuming service.**
- **Additional health and safety information may be obtained from the refrigerant and lubricant manufacturers.**
- **If the A/C compressor relief valve released refrigerant to the atmosphere, determine and correct the cause of the excessive pressure in the system, then replace the relief valve.**

1. Vehicle Lift

GETtheMANUALS.org

1. Raise the vehicle on a lift, and make sure it is securely supported.

2. Glove Box - Move
    1. Detach the glove box damper hook (A), and release both glove box stops (B) by pushing them in, then let glove box (C) hang down.

Fig. 1: Detaching Glove Box Damper Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. R-134a Refrigerant Recovery/Recycling/Charging Station - Connection
    1. Connect an R-134a refrigerant recovery/recycling/charging station (A) to the high-pressure service port (B) and the low-pressure service port (C), as shown, following the equipment manufacturer's instructions.

GETtheMANUALS.org

Fig. 2: Identifying Refrigerant Recovery/Recycling/Charging Station, High And Low Pressure Service Port
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. A/C Refrigerant - Recovery
    1. Recover the refrigerant from the A/C system.
    2. Measure the amount of refrigerant oil removed from the A/C system after the recovery process is completed. Be sure to put the same amount of new refrigerant oil back into the A/C system before charging.
5. Front Splash Shield
    1. Remove the bolts (A), then remove the clips (B) that secure the front inner fender and the front splash shield (C) to the body.
    2. From under the front bumper (D), remove the clips (E).
    3. From under the body, remove the clips (F), then pull out the front splash shield.

GETtheMANUALS.org

Fig. 3: Identifying Front Splash Shield, Front Bumper, Clips And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. A/C Compressor Relief Valve
   1. Remove the relief valve (A) with a O-ring (B).

NOTE: **Plug the opening to keep moisture and foreign material from entering the system, and the A/C compressor oil from running out.**

Fig. 4: Identifying A/C Compressor Relief Valve And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

INSTALLATION

CAUTION:

- **Air conditioning refrigerant or lubricant vapor can irritate your eyes, nose, or throat.**
- **Be careful when connecting service equipment.**
- **Do not breathe refrigerant or vapor.**
- **Do not operate the leak detector near flammable vapors. Its sensor operates at high temperatures, and could ignite the vapors, resulting in personal injury and/or damage to the equipment.**

NOTE:

- **If an accidental system discharge occurs, ventilate the work area before resuming service.**
- **Additional health and safety information may be obtained from the refrigerant and lubricant manufacturers.**
- **Check the system for leaks using an R-134a refrigerant leak detector with an accuracy of 14 g (0.5 oz) per year or better.**
- **If the A/C compressor relief valve released refrigerant to the atmosphere, determine and correct the cause of the excessive pressure in the system, then replace the relief valve.**
- **Replace the O-rings with new ones at each fitting, and apply a thin coat of refrigerant oil before installing them. Be sure to use the correct O-rings for HFC-134a (R-134a) to avoid leakage.**
- **Use only PAG refrigerant oil for HFC-134a A/C systems.**
- **To avoid contamination, do not return the oil to the container once dispensed, and never mix it with other refrigerant oils.**
- **Immediately after using the oil, reinstall the cap on the container, and seal it to avoid moisture absorption.**
- **Do not spill the refrigerant oil on the vehicle; it may damage the paint; if the refrigerant oil contacts the paint, wash it off immediately.**

1. A/C Compressor Relief Valve
    1. Clean the mating surfaces.
    2. Remove the plug.
    3. Install the relief valve (A) with a new O-ring (B) that is lubricated with clean refrigerant oil.

GETtheMANUALS.org

Fig. 5: Identifying A/C Compressor Relief Valve And O-Ring With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Splash Shield
    1. Install the front splash shield (A), then install the bolts (B) and the clips (C, D). Make sure the clips snap into place securely.

Fig. 6: Identifying Front Splash Shield, Clips And Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

3. R-134a Refrigerant Recovery/Recycling/Charging Station - Connection
    1. Connect an R-134a refrigerant recovery/recycling/charging station (A) to the high-pressure service port (B) and the low-pressure service port (C), as shown, following the equipment manufacturer's instructions.

Fig. 7: Identifying Refrigerant Recovery/Recycling/Charging Station, High And Low Pressure Service Port
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. A/C System Evacuation
    1. Evacuate the system. The vacuum pump should run for a minimum of 30 minutes to eliminate all moisture from the system. When the suction gauge reads -93.3 kPa (-700 mmHg, - 27.55 inHg) for at least 30 minutes, close all valves, and turn off the vacuum pump.
    2. If the suction gauge dose not reach approximately -93.3 kPa (-700 mmHg, -27.55 inHg) in 15 minutes, there is probably a large leak in the system. Partially charge the system, and check for leaks.
5. A/C Refrigerant - Charging
    1. Charge the system with the specified amount of R-134a refrigerant. Do not overcharge the system; the A/C compressor will be damaged.

       Select the appropriate units of measure for your refrigerant charging station.

       Refrigerant Capacity:

GETtheMANUALS.org

385 to 435 g

13.6 to 15.4 oz

0.385 to 0.435 kg

0.849 to 0.959 lbs

6. A/C Refrigerant - Leak Check

Leak Detector Usage Tips (Refer to the Operator's Manual for complete operating instructions)

- Position the vehicle in a wind-free work area. This will aid in detecting small leaks.
- When using the leak detector for the first time, allow it to warm up for 2 minutes with the probe in a clean atmosphere. This lets the temperature sensor in the detector stabilize.
- The calibration check should be done in the "Search 2" mode. Once that is done, the other check modes do not need calibrating.
- When leak checking through the HVAC module drain hose, avoid drawing water into the probe. Water can damage the internal pump and sensor.
- Avoid creasing the flexible probe extension. Creases can restrict air flow and give false readings.
- Because the detector recalibrates itself for ambient gases, it may be necessary to move the detector away from the leak to clear the sensor. Once the sensor has cleared, recheck the suspected leak.
- When removing the clear probe tip, be careful not to lose the flow ball.
- R-134a is heavier than air; always check below and to the sides of all potential leak sources.
- Halogen leak detectors are sensitive to chemicals: windshield washing solutions, solvents/cleaners, and some vehicle adhesives. Keep these chemicals out of the area when doing leak detection.

Fluorescent Dye Usage Tips

- Use only Tracer-Stick single dose fluorescent dye capsules from Tracerline®. Other dyes contain solvents that may contaminate the refrigerant oil, leading to component failure.
- Adding excessive amounts of dye can damage the A/C compressor.
- PAG oil is water soluble, so condensation on the evaporator core or the refrigerant lines may wash the PAG oil and fluorescent dye away from the actual leak. Condensation may also carry dye through the HVAC module drain.
- After checking and repairing leaks, thoroughly clean any residual dye from the areas where leaks were found. Use GLO-AWAY dye cleaner, from Tracerline®, and hot water to remove the dye (follow the instructions on the bottle). Residual dye stains can cause misdiagnosis of any future A/C system leaks.
- If any refrigerant dye contacts an exterior paint surface, remove it by doing this:
    - Carefully wash the affected surfaces to remove any dirt, and to prevent paint scratching.
    - Mix water and isopropyl alcohol in a 50/50 mixture. Soak a soft 100 % cotton towel with the water/alcohol mixture, and place the cloth on the affected areas to remove the dye.
    - After removing the dye with the water/alcohol-soaked cloth, carefully wash the affected

GETtheMANUALS.org

areas, and check that there is no remaining dye.

1. With the engine OFF, use a halogen leak detector first to detect the leak source. Follow a continuous path in order to ensure that you will not miss any possible leaks. Test the following areas of the system for leaks:

Possible Leak Area	Diagnostic Procedure with the Leak Detector	Notes
Service ports	• Check the service ports with caps installed • If the detector "sniffs" a leak, use fluorescent dye to confirm it	When capping the service ports, ensure that the seals on the port caps are in place, and that the caps are tight. The caps are used as the final seals in the system
A/C condenser	If the detector "sniffs" a leak, use fluorescent dye to confirm it	• Check for joints or connections coated with oily dust • Check for damaged and corroded areas • Check all fittings, couplings, brazed/welded areas and areas around attachment points • Move the probe slowly (1 in/second or less), and keep it within 1/4 in of the component being checked. This maximizes the chance of detecting a leak • If you detect a leak, blow compressed air over the area, then recheck for leaks. For large leaks, clearing the area with compressed air may help you pinpoint the leak source
Evaporator	• Check at the evaporator drain hose • Check at the passenger's side vent and turn the blower on at low speed	
A/C lines	• Wiggle the rubber hoses when checking crimped metal ends • If the detector "sniffs" a leak, use fluorescent dye to confirm it	• Check all fittings, couplings, pressure switches, brazed/welded areas, and areas around attachment points on A/C lines and components • Check for damaged and corroded areas • Move the probe slowly (1 in/second or less), and keep it within 1/4 in of the component being checked. This maximizes the chance of detecting a leak

2. Close the quick coupler valves, then disconnect the quick couplers from the vehicle service ports.
3. Attach the universal connect set, from the Optimax Jr. Leak Detection Kit, to the service valve fitting. Close the control valve (the black knob on the connect set).

GETtheMANUALS.org

4. Attach the charging station low pressure hose quick coupler to the service valve fitting, and open the quick coupler valve. Evacuate the connect set using the charging station vacuum pump, then close the quick coupler valve.
5. Detach the universal connect set, and install a Tracer-Stick® dye capsule between the connect set and the service valve fitting (see the manufacturer's instructions for more detail).
6. Attach the quick coupler on the universal connect set to the low pressure service port on the vehicle. Open the charging station low pressure hose quick coupler valve, but do not open the control valve.
7. Start the engine, and set the A/C system to maximum cooling. Open the control valve to let refrigerant and the dye enter the A/C system through the low pressure service port. Close the control valve when the Tracer-Stick® dye capsule is empty.
8. Run the engine and A/C system for 15 minutes to thoroughly circulate the dye. Then shut the engine off, and inspect the following areas of the system for leaks:

NOTE:

- **Check for leaks in a dark work area, and use the UV light and the special glasses from the leak check kit. Other UV lights may not work well with the Tracer-Stick® dye.**
- **Small leaks may take up to 1 week of vehicle operation (with normal A/C use) to become visible.**

Possible Leak Area	Diagnostic Procedure with Fluorescent Dye
Service ports	If a leak is found, replace the cap/o-ring seal or A/C line as needed
A/C lines	• Use a permanent marker pen to circle the leak area • If a leak is found, remove and replace the A/C line
A/C condenser	• If a leak is found, remove the A/C condenser • Determine whether leak is in the A/C condenser or the receiver/dryer • Use a permanent marker pen to circle the leak area • Replace either the receiver/dryer, or the A/C condenser, depending upon which is leaking
A/C compressor	• Check for leaks at all of the A/C compressor joints, the clutch center, the A/C compressor front housing bolts, and the scroll bolts on the back of the A/C compressor • If a leak is found, use a permanent marker pen to circle the leak area • If the A/C compressor relief valve appears to be leaking, determine whether the leak is coming from the relief valve, or the joint between the A/C compressor casing and the valve. If the leak is from the relief valve, check the A/C system pressures, and refer to the pressure test table in the A/C system test. If the leak is from the casing/valve joint, replace the A/C compressor relief valve • If the leak is coming from the suction hose and/or discharge hose fittings on

GETtheMANUALS.org

	the A/C compressor, clean the A/C fittings and replace the suction/discharge fitting O-rings • For all other A/C compressor leaks, remove and replace the A/C compressor
Evaporator	• Start checking for evaporator leaks by illuminating the evaporator drain tube area • If a leak is found, remove the evaporator core • Determine whether leak is from evaporator or expansion valve • Use a permanent marker pen to circle leak area • Replace the expansion valve, or the evaporator core, depending upon which is leaking

7. A/C System - Test
    1. Insert a thermometer (A) in the center vent.
    2. Place a hygro-thermometer (B) near the blower unit's recirculation inlet duct.
    3. Test conditions:
        - Move the vehicle out of direct sunlight and let it cool down to the surrounding (ambient) temperature. If necessary, wash the vehicle to cool it down more quickly.
        - The blower intake temperature must be at least 68°F (20°C).
        - Open the hood.
        - Open the front doors.
        - Start the engine.
        - Set the temperature control dial or temperature control button to MAX COOL, the mode control button to VENT, and the recirculation control button to RECIRCULATE.
        - Turn the A/C button on and the fan control dial or fan control button to Max.
        - Run the engine at 1, 500 rpm.
        - No driver or passengers in vehicle.

GETtheMANUALS.org

Fig. 8: Checking Delivery Temperature From Thermometer In Center Vent
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Inspect the A/C components for the following conditions:
   - A/C compressor clutch not engaged.
   - Abnormal frost areas.
   - Unusual noises.

   If you observe any of these conditions, refer to the Symptom Troubleshooting Index.

5. After running the air conditioning for 10 minutes under the above test conditions, read the delivery temperature from the thermometer in the center vent, the intake temperature near the blower unit, and the discharge (high) and suction (low) pressures on the A/C gauges.
6. To complete the vent (delivery)/intake temperature chart:
   - Mark the vent (delivery) temperature on the vertical line.
   - Mark the intake temperature on the bottom line.
   - Draw a vertical line from the intake temperature mark.
   - Draw a horizontal line from the vent (delivery) temperature mark until it intersects the vertical line.

   NOTE: **The vent temperature and intake temperature should intersect in the shaded area. Any measurements outside the line may indicate the need for further inspection.**

GETtheMANUALS.org

<u>Fig. 9: Intake Temperature Versus Vent (Delivery) Temperature Graph</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. To complete the high side (discharge) pressure/intake temperature chart:
   - Mark the high side (discharge) pressure on the vertical line.
   - Mark the intake temperature on the bottom line.
   - Draw a vertical line from the intake temperature mark.
   - Draw a horizontal line from the high side (discharge) pressure mark until it intersects the vertical line.

NOTE: **The high side pressure and intake temperature should intersect in the shaded area. Any measurements outside the line may indicate the need for further inspection.**

GETtheMANUALS.org

<u>Fig. 10: Intake Temperature Versus High Side (Discharge) Pressure Graph</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. To complete the low side (suction) pressure/intake temperature chart:
   - Mark the low side (suction) pressure along the vertical line.
   - Mark the intake temperature along the bottom line.
   - Draw a vertical line from the intake temperature mark.
   - Draw a horizontal line from the low side (suction) pressure mark until it intersects the vertical line.

NOTE: **The low side pressure and intake temperature should intersect in the shaded area. Any measurements outside the line may indicate the need for further inspection.**

GETtheMANUALS.org

<u>Fig. 11: Intake Temperature Versus Low Side (Suction) Pressure Graph</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Glove Box - Move
    1. Install the glove box (A). Make sure the glove box stops (B) snap into place securely.
    2. Install the glove box damper hook (C).

GETtheMANUALS.org

REMOVAL

CAUTION:

- **Air conditioning refrigerant or lubricant vapor can irritate your eyes, nose, or throat.**
- **Be careful when connecting service equipment.**
- **Do not breathe refrigerant or vapor.**

NOTE:

- **If accidental system discharge occurs, ventilate the work area before resuming service.**
- **Additional health and safety information may be obtained from the refrigerant and lubricant manufacturers.**
- **Do not install an A/C compressor into a system unless you are completely sure that the system is free of contamination. Installing the A/C compressor into a contaminated system can result in premature A/C compressor failure.**

GETtheMANUALS.org

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Glove Box - Move
    1. Detach the glove box damper hook (A), and release both glove box stops (B) by pushing them in, then let glove box (C) hang down.

Fig. 13: Detaching Glove Box Damper Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. R-134a Refrigerant Recovery/Recycling/Charging Station - Connection
    1. Connect an R-134a refrigerant recovery/recycling/charging station (A) to the high-pressure service port (B) and the low-pressure service port (C), as shown, following the equipment manufacturer's instructions.

GETtheMANUALS.org

Fig. 14: Identifying Refrigerant Recovery/Recycling/Charging Station, High And Low Pressure Service Port
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. A/C Refrigerant - Recovery
    1. Recover the refrigerant from the A/C system.
    2. Measure the amount of refrigerant oil removed from the A/C system after the recovery process is completed. Be sure to put the same amount of new refrigerant oil back into the A/C system before charging.
5. Battery Terminal - Disconnection
    1. Make sure the ignition switch is in LOCK (0).
    2. Disconnect and isolate the negative cable (A) from the battery.

    NOTE: Always disconnect the negative side first.

    3. Disconnect the positive cable (B) from the battery.

GETtheMANUALS.org

Fig. 15: Identifying Battery Positive And Negative Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Drive Belt
    1. Move the auto-tensioner (A) using the belt tension release tool in the direction of the arrow to relieve tension from the drive belt, then remove the drive belt.

Fig. 16: Moving Auto-Tensioner Using Belt Tension Release Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Front Splash Shield
    1. Remove the bolts (A), then remove the clips (B) that secure the front inner fender and the front splash shield (C) to the body.
    2. From under the front bumper (D), remove the clips (E).
    3. From under the body, remove the clips (F), then pull out the front splash shield.

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the A/C compressor (A).

Fig. 19: Identifying A/C Compressor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

CAUTION:

- **Air conditioning refrigerant or lubricant vapor can irritate your eyes, nose, or throat.**
- **Be careful when connecting service equipment.**
- **Do not breathe refrigerant or vapor.**
- **Do not operate the leak detector near flammable vapors. Its sensor operates at high temperatures, and could ignite the vapors, resulting in personal injury and/or damage to the equipment.**

GETtheMANUALS.org

NOTE:

- **If an accidental system discharge occurs, ventilate the work area before resuming service.**
- **Additional health and safety information may be obtained from the refrigerant and lubricant manufacturers.**
- **Check the system for leaks using an R-134a refrigerant leak detector with an accuracy of 14 g (0.5 oz) per year or better.**
- **Do not install an A/C compressor into a system unless you are completely sure that the system is free of contamination. Installing the A/C compressor into a contaminated system can result in premature A/C compressor failure.**
- **Inspect the A/C lines for any signs of contamination.**
- **Replace the O-rings with new ones at each fitting, and apply a thin coat of refrigerant oil before installing them. Be sure to use the correct O-rings for HFC-134a (R-134a) to avoid leakage.**
- **Use only PAG refrigerant oil for HFC-134a A/C systems.**
- **To avoid contamination, do not return the oil to the container once dispensed, and never mix it with other refrigerant oils.**
- **Immediately after using the oil, reinstall the cap on the container, and seal it to avoid moisture absorption.**
- **Do not spill the refrigerant oil on the vehicle; it may damage the paint; if the refrigerant oil contacts the paint, wash it off immediately.**

1. A/C Refrigerant Oil - Replacement

   Recommended PAG oil: SP-10

   P/N 38897-P13-A01AH: 120 mL (4 fl oz)

   It is important to have the correct amount of refrigerant oil in the A/C system to ensure proper lubrication of the A/C compressor. Too little oil damages the A/C compressor; too much oil reduces the cooling capacity of the system, and can produce high vent temperatures.

   - To avoid contamination, do not return the oil to the container once dispensed, and never mix it with other refrigerant oils.
   - Immediately after using the oil, reinstall the cap on the container, and seal it to avoid moisture absorption.
   - Do not spill the refrigerant oil on the vehicle; it may damage the paint; if it gets on the paint, wash it off immediately.

   Add the recommended refrigerant oil in the amount listed if you replace any of the following parts.

A/C condenser (including dryer desiccant).....	25 mL (5/6 fl oz)
Evaporator.....	40 mL (1 1/3 fl oz)

GETtheMANUALS.org

Line or hose.....	10 mL (1/3 fl oz)
Dryer desiccant.....	10 mL (1/3 fl oz)
Leakage repair.....	25 mL (5/6 fl oz)
A/C compressor.....	Since the oil separator is equipped inside the A/C compressor for this vehicle, oil drainage is unnecessary at the time of A/C compressor replacement.

2. A/C Compressor Assembly
   1. Install the A/C compressor (A).

Fig. 20: Identifying A/C Compressor With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

   2. Remove the plugs or caps.
   3. Connect the suction hose (A) with a new O-ring (B) that is lubricated with clean refrigerant oil.
   4. Connect the discharge hose (C) with a new O-ring (D) that is lubricated with clean refrigerant oil.
   5. Connect the A/C compressor clutch connector (E).

GETtheMANUALS.org

Fig. 21: Identifying A/C Compressor Clutch Connector, Suction, Discharge Hose And O-Ring With Torque Specifications

4. Drive Belt
    1. Install the drive belt.

Fig. 23: Installing Drive Belt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Battery Terminal - Reconnection

GETtheMANUALS.org

NOTE: If the battery performance is abnormal, test the battery.

1. Clean the battery terminals.
2. Connect the positive cable (A) to the battery.

   NOTE: Always connect the positive side first.

3. Connect the negative cable (B) to the battery.
4. Apply multipurpose grease to the terminals to prevent corrosion.

Fig. 24: Identifying Battery Positive And Negative Cable With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. R-134a Refrigerant Recovery/Recycling/Charging Station - Connection
   1. Connect an R-134a refrigerant recovery/recycling/charging station (A) to the high-pressure service port (B) and the low-pressure service port (C), as shown, following the equipment manufacturer's instructions.

GETtheMANUALS.org

Fig. 25: Identifying Refrigerant Recovery/Recycling/Charging Station, High And Low Pressure Service Port

7. A/C System Evacuation
    1. Evacuate the system. The vacuum pump should run for a minimum of 30 minutes to eliminate all moisture from the system. When the suction gauge reads -93.3 kPa (-700 mmHg, - 27.55 inHg) for at least 30 minutes, close all valves, and turn off the vacuum pump.
    2. If the suction gauge dose not reach approximately -93.3 kPa (-700 mmHg, -27.55 inHg) in 15 minutes, there is probably a large leak in the system. Partially charge the system, and check for leaks.
8. A/C Refrigerant - Charging
    1. Charge the system with the specified amount of R-134a refrigerant. Do not overcharge the system; the A/C compressor will be damaged.

       Select the appropriate units of measure for your refrigerant charging station.

       Refrigerant Capacity:

       385 to 435 g

       13.6 to 15.4 oz

       0.385 to 0.435 kg

GETtheMANUALS.org

0.849 to 0.959 lbs

9. A/C Refrigerant - Leak Check

Leak Detector Usage Tips (Refer to the Operator's Manual for complete operating instructions)

- Position the vehicle in a wind-free work area. This will aid in detecting small leaks.
- When using the leak detector for the first time, allow it to warm up for 2 minutes with the probe in a clean atmosphere. This lets the temperature sensor in the detector stabilize.
- The calibration check should be done in the "Search 2" mode. Once that is done, the other check modes do not need calibrating.
- When leak checking through the HVAC module drain hose, avoid drawing water into the probe. Water can damage the internal pump and sensor.
- Avoid creasing the flexible probe extension. Creases can restrict air flow and give false readings.
- Because the detector recalibrates itself for ambient gases, it may be necessary to move the detector away from the leak to clear the sensor. Once the sensor has cleared, recheck the suspected leak.
- When removing the clear probe tip, be careful not to lose the flow ball.
- R-134a is heavier than air; always check below and to the sides of all potential leak sources.
- Halogen leak detectors are sensitive to chemicals: windshield washing solutions, solvents/cleaners, and some vehicle adhesives. Keep these chemicals out of the area when doing leak detection.

Fluorescent Dye Usage Tips

- Use only Tracer-Stick single dose fluorescent dye capsules from Tracerline®. Other dyes contain solvents that may contaminate the refrigerant oil, leading to component failure.
- Adding excessive amounts of dye can damage the A/C compressor.
- PAG oil is water soluble, so condensation on the evaporator core or the refrigerant lines may wash the PAG oil and fluorescent dye away from the actual leak. Condensation may also carry dye through the HVAC module drain.
- After checking and repairing leaks, thoroughly clean any residual dye from the areas where leaks were found. Use GLO-AWAY dye cleaner, from Tracerline®, and hot water to remove the dye (follow the instructions on the bottle). Residual dye stains can cause misdiagnosis of any future A/C system leaks.
- If any refrigerant dye contacts an exterior paint surface, remove it by doing this:
  - Carefully wash the affected surfaces to remove any dirt, and to prevent paint scratching.
  - Mix water and isopropyl alcohol in a 50/50 mixture. Soak a soft 100 % cotton towel with the water/alcohol mixture, and place the cloth on the affected areas to remove the dye.
  - After removing the dye with the water/alcohol-soaked cloth, carefully wash the affected areas, and check that there is no remaining dye.

1. With the engine OFF, use a halogen leak detector first to detect the leak source. Follow a continuous path in order to ensure that you will not miss any possible leaks. Test the following areas of the system for leaks:

GETtheMANUALS.org

Possible Leak Area	Diagnostic Procedure with the Leak Detector	Notes
Service ports	• Check the service ports with caps installed • If the detector "sniffs" a leak, use fluorescent dye to confirm it	When capping the service ports, ensure that the seals on the port caps are in place, and that the caps are tight. The caps are used as the final seals in the system
A/C condenser	If the detector "sniffs" a leak, use fluorescent dye to confirm it	• Check for joints or connections coated with oily dust • Check for damaged and corroded areas • Check all fittings, couplings, brazed/welded areas and areas around attachment points • Move the probe slowly (1 in/second or less), and keep it within 1/4 in of the component being checked. This maximizes the chance of detecting a leak • If you detect a leak, blow compressed air over the area, then recheck for leaks. For large leaks, clearing the area with compressed air may help you pinpoint the leak source
Evaporator	• Check at the evaporator drain hose • Check at the passenger's side vent and turn the blower on at low speed	
A/C lines	• Wiggle the rubber hoses when checking crimped metal ends • If the detector "sniffs" a leak, use fluorescent dye to confirm it	• Check all fittings, couplings, pressure switches, brazed/welded areas, and areas around attachment points on A/C lines and components • Check for damaged and corroded areas • Move the probe slowly (1 in/second or less), and keep it within 1/4 in of the component being checked. This maximizes the chance of detecting a leak

2. Close the quick coupler valves, then disconnect the quick couplers from the vehicle service ports.
3. Attach the universal connect set, from the Optimax Jr. Leak Detection Kit, to the service valve fitting. Close the control valve (the black knob on the connect set).
4. Attach the charging station low pressure hose quick coupler to the service valve fitting, and open the quick coupler valve. Evacuate the connect set using the charging station vacuum pump, then close the quick coupler valve.
5. Detach the universal connect set, and install a Tracer-Stick® dye capsule between the connect set and the service valve fitting (see the manufacturer's instructions for more detail).

GETtheMANUALS.org

6. Attach the quick coupler on the universal connect set to the low pressure service port on the vehicle. Open the charging station low pressure hose quick coupler valve, but do not open the control valve.
7. Start the engine, and set the A/C system to maximum cooling. Open the control valve to let refrigerant and the dye enter the A/C system through the low pressure service port. Close the control valve when the Tracer-Stick® dye capsule is empty.
8. Run the engine and A/C system for 15 minutes to thoroughly circulate the dye. Then shut the engine off, and inspect the following areas of the system for leaks:

NOTE:

- **Check for leaks in a dark work area, and use the UV light and the special glasses from the leak check kit. Other UV lights may not work well with the Tracer-Stick® dye.**
- **Small leaks may take up to 1 week of vehicle operation (with normal A/C use) to become visible.**

Possible Leak Area	Diagnostic Procedure with Fluorescent Dye
Service ports	If a leak is found, replace the cap/o-ring seal or A/C line as needed
A/C lines	• Use a permanent marker pen to circle the leak area • If a leak is found, remove and replace the A/C line
A/C condenser	• If a leak is found, remove the A/C condenser • Determine whether leak is in the A/C condenser or the receiver/dryer • Use a permanent marker pen to circle the leak area • Replace either the receiver/dryer, or the A/C condenser, depending upon which is leaking
A/C compressor	• Check for leaks at all of the A/C compressor joints, the clutch center, the A/C compressor front housing bolts, and the scroll bolts on the back of the A/C compressor • If a leak is found, use a permanent marker pen to circle the leak area • If the A/C compressor relief valve appears to be leaking, determine whether the leak is coming from the relief valve, or the joint between the A/C compressor casing and the valve. If the leak is from the relief valve, check the A/C system pressures, and refer to the pressure test table in the A/C system test. If the leak is from the casing/valve joint, replace the A/C compressor relief valve • If the leak is coming from the suction hose and/or discharge hose fittings on the A/C compressor, clean the A/C fittings and replace the suction/discharge fitting O-rings • For all other A/C compressor leaks, remove and replace the A/C compressor
	• Start checking for evaporator leaks by illuminating the evaporator drain tube area

GETtheMANUALS.org

Evaporator	• If a leak is found, remove the evaporator core • Determine whether leak is from evaporator or expansion valve • Use a permanent marker pen to circle leak area • Replace the expansion valve, or the evaporator core, depending upon which is leaking

10. A/C System - Test
    1. Insert a thermometer (A) in the center vent.
    2. Place a hygro-thermometer (B) near the blower unit's recirculation inlet duct.
    3. Test conditions:
        - Move the vehicle out of direct sunlight and let it cool down to the surrounding (ambient) temperature. If necessary, wash the vehicle to cool it down more quickly.
        - The blower intake temperature must be at least 68°F (20°C).
        - Open the hood.
        - Open the front doors.
        - Start the engine.
        - Set the temperature control dial or temperature control button to MAX COOL, the mode control button to VENT, and the recirculation control button to RECIRCULATE.
        - Turn the A/C button on and the fan control dial or fan control button to Max.
        - Run the engine at 1, 500 rpm.
        - No driver or passengers in vehicle.

Fig. 26: Checking Delivery Temperature From Thermometer In Center Vent

GETtheMANUALS.org

4. Inspect the A/C components for the following conditions:
   - A/C compressor clutch not engaged.
   - Abnormal frost areas.
   - Unusual noises.

   If you observe any of these conditions, refer to the Symptom Troubleshooting Index.

5. After running the air conditioning for 10 minutes under the above test conditions, read the delivery temperature from the thermometer in the center vent, the intake temperature near the blower unit, and the discharge (high) and suction (low) pressures on the A/C gauges.
6. To complete the vent (delivery)/intake temperature chart:
   - Mark the vent (delivery) temperature on the vertical line.
   - Mark the intake temperature on the bottom line.
   - Draw a vertical line from the intake temperature mark.
   - Draw a horizontal line from the vent (delivery) temperature mark until it intersects the vertical line.

NOTE: **The vent temperature and intake temperature should intersect in the shaded area. Any measurements outside the line may indicate the need for further inspection.**

GETtheMANUALS.org

<u>Fig. 27: Intake Temperature Versus Vent (Delivery) Temperature Graph</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. To complete the high side (discharge) pressure/intake temperature chart:
   - Mark the high side (discharge) pressure on the vertical line.
   - Mark the intake temperature on the bottom line.
   - Draw a vertical line from the intake temperature mark.
   - Draw a horizontal line from the high side (discharge) pressure mark until it intersects the vertical line.

NOTE: **The high side pressure and intake temperature should intersect in the shaded area. Any measurements outside the line may indicate the need for further inspection.**

GETtheMANUALS.org

Fig. 28: Intake Temperature Versus High Side (Discharge) Pressure Graph
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. To complete the low side (suction) pressure/intake temperature chart:
   - Mark the low side (suction) pressure along the vertical line.
   - Mark the intake temperature along the bottom line.
   - Draw a vertical line from the intake temperature mark.
   - Draw a horizontal line from the low side (suction) pressure mark until it intersects the vertical line.

NOTE: **The low side pressure and intake temperature should intersect in the shaded area. Any measurements outside the line may indicate the need for further inspection.**

A/C COMPRESSOR THERMAL PROTECTOR REMOVAL AND INSTALLATION

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Front Splash Shield
    1. Remove the bolts (A), then remove the clips (B) that secure the front inner fender and the front splash shield (C) to the body.
    2. From under the front bumper (D), remove the clips (E).
    3. From under the body, remove the clips (F), then pull out the front splash shield.

GETtheMANUALS.org

Fig. 31: Identifying Front Splash Shield, Front Bumper, Clips And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. A/C Compressor Thermal Protector
    1. Disconnect the A/C compressor clutch connector (A).
    2. Remove the holders (B).
    3. Disconnect the field coil connector (C).
    4. Remove the thermal protector (D).

GETtheMANUALS.org

Fig. 32: Identifying A/C Compressor Clutch Connector, Field Coil Connector, Thermal Protector And Holder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. A/C Compressor Thermal Protector
    1. Replace the thermal protector (A) with a new one, and apply silicone grease (B) to the bottom of the thermal protector.

Fig. 33: Applying Grease At Bottom Of Thermal Protector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the thermal protector (A).
3. Connect the field coil connector (B).
4. Install the holders (C).

GETtheMANUALS.org

5. Connect the A/C compressor clutch connector (D).

Fig. 34: Identifying A/C Compressor Clutch Connector, Field Coil Connector, Thermal Protector And Holder With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Splash Shield
    1. Install the front splash shield (A), then install the bolts (B) and the clips (C, D). Make sure the clips snap into place securely.

4. Radiator Mounting Bracket, Upper Both
    1. Install the radiator mount upper brackets.

Fig. 51: Identifying Radiator Mounting Bracket Assembly With Torque Specifications

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Hood Latch

NOTE: Apply multipurpose grease to the hood latch as indicated by the arrows.

Fig. 52: Identifying Hood Latch Grease Applying Area
Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. Connect the connector (A).
2. Connect the hood opener cable (B).
3. Install the hood latch (C), then install the bolts (D).

GETtheMANUALS.org

Fig. 53: Connecting Hood Opener Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Horn and Bracket Assembly
    1. Install the horn (A) and the bracket (B) as an assembly.
    2. Connect the connector.

Fig. 54: Identifying Horn And Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

7. Front Grille Bracket
    1. Install the front grille bracket (A). Make sure the clips (B) snap into place securely.

Fig. 55: Identifying Front Grille Bracket And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Front Bumper Upper Duct
    1. Install the front bumper upper duct (A). Make sure the clips (B) snap into place securely.

Fig. 56: Identifying Front Bumper Upper Duct And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Front Grille

GETtheMANUALS.org

1. Install the front grille (A) by pushing on the clip areas until the clips snap into place.
2. Install the clips (B).

Fig. 57: Installing Front Grille
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Hood Latch - Adjustment
    1. Slightly loosen the hood latch mounting bolts (A).

Fig. 58: Adjusting Hood Latch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Adjust the hood latch (B) to obtain the proper height at the forward edge, and move the hood latch right or left until the striker (C) is centered in the hood latch.
    3. Tighten the hood latch mounting bolts to the specified torque.

GETtheMANUALS.org

4. Make sure the hood opens properly and locks securely.
5. Apply multipurpose grease to the hood latch as indicated by the arrows.

Fig. 59: Identifying Hood Latch Grease Applying Area

REMOVAL

CAUTION:

- **Air conditioning refrigerant or lubricant vapor can irritate your eyes, nose, or throat.**
- **Be careful when connecting service equipment.**
- **Do not breathe refrigerant or vapor.**

NOTE:

- **If accidental system discharge occurs, ventilate the work area before resuming service.**
- **Additional health and safety information may be obtained from the refrigerant and lubricant manufacturers.**

1. Glove Box - Move
    1. Detach the glove box damper hook (A), and release both glove box stops (B) by pushing them in, then let glove box (C) hang down.

GETtheMANUALS.org

Fig. 60: Detaching Glove Box Damper Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. R-134a Refrigerant Recovery/Recycling/Charging Station - Connection
    1. Connect an R-134a refrigerant recovery/recycling/charging station (A) to the high-pressure service port (B) and the low-pressure service port (C), as shown, following the equipment manufacturer's instructions.

Fig. 61: Identifying Refrigerant Recovery/Recycling/Charging Station, High And Low

GETtheMANUALS.org

Pressure Service Port
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. A/C Refrigerant - Recovery
    1. Recover the refrigerant from the A/C system.
    2. Measure the amount of refrigerant oil removed from the A/C system after the recovery process is completed. Be sure to put the same amount of new refrigerant oil back into the A/C system before charging.
4. Front Grille
    1. Apply protective tape (A) to the front grille lower trim (B).

Fig. 62: Applying Protective Tape To Front Grille Lower Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the clips (C) and detach the hooks (D).
    3. Insert a shop towel (A) between the front grille (B) and the front grille lower trim (C).

GETtheMANUALS.org

Fig. 63: Inserting Shop Towel Between Front Grille And Front Grille Lower Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Insert a flat-tip screwdriver (A) into the opening at the front grille (B), then turn the screwdriver to detach the clip (C).

NOTE: Repeat this procedure on the opposite side.

Fig. 64: Inserting Flat-Tip Screwdriver Into Opening At Front Grille
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the front grille (A).

GETtheMANUALS.org

Fig. 65: Removing Front Grille
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Front Wheel Arch Protector Front Side As Needed - Both Sides

NOTE: Repeat on the opposite side.

1. Remove the screws (A) and the clips (B) securing the front wheel arch protector (C).
2. Carefully pry out the clip portions of the wheel arch protector with the appropriate trim tool to detach the clips (D, E), then detach the wheel arch protector front side as needed.
3. Put a shop towel (F) in the opening between the front wheel arch protector and the front fender.

GETtheMANUALS.org

Fig. 66: Removing Wheel Arch Protector Front Side Using Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 67: Placing Shop Towel In Opening Between Front Wheel Arch Protector And Front Fender
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Front Bumper
    1. Remove the screws (A), the bolts (B), and the clips (C) securing the front bumper (D).

GETtheMANUALS.org

Fig. 68: Identifying Front Bumper, Bolts, Screws And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Pull out the front bumper (A) from the side spacer (B). Repeat this step on the opposite side.

Fig. 69: Removing Front Bumper From Side Spacer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Detach the clip (A). Repeat this step on the opposite side.

GETtheMANUALS.org

Fig. 70: Removing Front Bumper Clip Using Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. With the help of an assistant, pull out both sides of the front bumper (A) from the upper beam (B).

Fig. 71: Removing Front Bumper From Upper Beam
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. With the help of an assistant, disconnect the connectors (A), then remove the front bumper (B).

GETtheMANUALS.org

Fig. 72: Identifying Front Bumper And Connectors

13. A/C Condenser Assembly

GETtheMANUALS.org

1. Remove the A/C condenser (A).

NOTE: **Be careful not to damage the radiator and A/C condenser fins when removing the A/C condenser.**

Fig. 80: Identifying A/C Condenser
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

CAUTION:

- **Air conditioning refrigerant or lubricant vapor can irritate your eyes, nose, or throat.**
- **Be careful when connecting service equipment.**
- **Do not breathe refrigerant or vapor.**
- **Do not operate the leak detector near flammable vapors. Its sensor operates at high temperatures, and could ignite the vapors, resulting in personal injury and/or damage to the equipment.**

NOTE:

- **If an accidental system discharge occurs, ventilate the work area before resuming service.**
- **Additional health and safety information may be obtained from the**

GETtheMANUALS.org

refrigerant and lubricant manufacturers.

- **Check the system for leaks using an R-134a refrigerant leak detector with an accuracy of 14 g (0.5 oz) per year or better.**
- **If you're installing a new A/C condenser, add refrigerant oil.**
- **Replace the O-rings with new ones at each fitting, and apply a thin coat of refrigerant oil before installing them. Be sure to use the correct O-rings for HFC-134a (R-134a) to avoid leakage.**
- **Use only PAG refrigerant oil for HFC-134a A/C systems.**
- **To avoid contamination, do not return the oil to the container once dispensed, and never mix it with other refrigerant oils.**
- **Immediately after using the oil, dispose of any remaining oil in the container, due to moisture absorption and short shelf life.**
- **Do not spill the refrigerant oil on the vehicle; it may damage the paint; if the refrigerant oil contacts the paint, wash it off immediately.**
- **Be careful not to damage the radiator and the A/C condenser fins when installing the A/C condenser.**

1. A/C Refrigerant Oil - Replacement

   Recommended PAG oil: SP-10

   P/N 38897-P13-A01AH: 120 mL (4 fl oz)

   It is important to have the correct amount of refrigerant oil in the A/C system to ensure proper lubrication of the A/C compressor. Too little oil damages the A/C compressor; too much oil reduces the cooling capacity of the system, and can produce high vent temperatures.

   - To avoid contamination, do not return the oil to the container once dispensed, and never mix it with other refrigerant oils.
   - Immediately after using the oil, reinstall the cap on the container, and seal it to avoid moisture absorption.
   - Do not spill the refrigerant oil on the vehicle; it may damage the paint; if it gets on the paint, wash it off immediately.

   Add the recommended refrigerant oil in the amount listed if you replace any of the following parts.

A/C condenser (including dryer desiccant).....	25 mL (5/6 fl oz)
Evaporator.....	40 mL (1 1/3 fl oz)
Line or hose.....	10 mL (1/3 fl oz)
Dryer desiccant.....	10 mL (1/3 fl oz)
Leakage repair.....	25 mL (5/6 fl oz)
A/C compressor.....	Since the oil separator is equipped inside the A/C compressor for this vehicle, oil drainage is unnecessary

GETtheMANUALS.org

at the time of A/C compressor replacement.

2. A/C Condenser Assembly
    1. Install the A/C condenser (A).

NOTE: **Be careful not to damage the radiator and A/C condenser fins when installing the A/C condenser.**

Fig. 81: Identifying A/C Condenser
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Radiator Mounting Bracket, Upper Both
    1. Install the radiator mount upper brackets.

GETtheMANUALS.org

6. Horn and Bracket Assembly
    1. Install the horn (A) and the bracket (B) as an assembly.
    2. Connect the connector.

Fig. 87: Identifying Horn And Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Front Grille Bracket

GETtheMANUALS.org

1. Install the front grille bracket (A). Make sure the clips (B) snap into place securely.

Fig. 88: Identifying Front Grille Bracket And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Front Bumper Upper Duct
    1. Install the front bumper upper duct (A). Make sure the clips (B) snap into place securely.

Fig. 89: Identifying Front Bumper Upper Duct And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Front Bumper
    1. With the help of an assistant, connect the connectors (A), then install the front bumper (B).

GETtheMANUALS.org

Fig. 90: Identifying Front Bumper And Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. With the help of an assistant, install both sides of the front bumper (A) to the upper beam (B).

Fig. 91: Installing Front Bumper To Upper Beam
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Push the front bumper (A) until the clip (B) snaps into place. Repeat this step on the opposite side.

GETtheMANUALS.org

Fig. 92: Pushing Front Bumper
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the front bumper (A) to the side spacer (B). Repeat this step on the opposite side.

Fig. 93: Installing Front Bumper To Side Spacer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the screws (A), the bolts (B), and the clips (C) securing the front bumper (D).

GETtheMANUALS.org

Fig. 94: Identifying Front Bumper, Bolts Screws And Clips With Torque Specifications

Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Front Grille
    1. Install the front grille (A) by pushing on the clip areas until the clips snap into place.
    2. Install the clips (B).

GETtheMANUALS.org

Fig. 96: Installing Front Grille
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Hood Latch - Adjustment
    1. Slightly loosen the hood latch mounting bolts (A).

Fig. 97: Adjusting Hood Latch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Adjust the hood latch (B) to obtain the proper height at the forward edge, and move the hood latch right or left until the striker (C) is centered in the hood latch.
    3. Tighten the hood latch mounting bolts to the specified torque.
    4. Make sure the hood opens properly and locks securely.
    5. Apply multipurpose grease to the hood latch as indicated by the arrows.

GETtheMANUALS.org

Fig. 98: Identifying Hood Latch Grease Applying Area
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. R-134a Refrigerant Recovery/Recycling/Charging Station - Connection
    1. Connect an R-134a refrigerant recovery/recycling/charging station (A) to the high-pressure service port (B) and the low-pressure service port (C), as shown, following the equipment manufacturer's instructions.

Fig. 99: Identifying Refrigerant Recovery/Recycling/Charging Station, High And Low

GETtheMANUALS.org

<u>Pressure Service Port</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. A/C System Evacuation
    1. Evacuate the system. The vacuum pump should run for a minimum of 30 minutes to eliminate all moisture from the system. When the suction gauge reads -93.3 kPa (-700 mmHg, - 27.55 inHg) for at least 30 minutes, close all valves, and turn off the vacuum pump.
    2. If the suction gauge dose not reach approximately -93.3 kPa (-700 mmHg, -27.55 inHg) in 15 minutes, there is probably a large leak in the system. Partially charge the system, and check for leaks.
15. A/C Refrigerant - Charging
    1. Charge the system with the specified amount of R-134a refrigerant. Do not overcharge the system; the A/C compressor will be damaged.

       Select the appropriate units of measure for your refrigerant charging station.

       Refrigerant Capacity:

       385 to 435 g

       13.6 to 15.4 oz

       0.385 to 0.435 kg

       0.849 to 0.959 lbs

16. A/C Refrigerant - Leak Check

Leak Detector Usage Tips (Refer to the Operator's Manual for complete operating instructions)

- Position the vehicle in a wind-free work area. This will aid in detecting small leaks.
- When using the leak detector for the first time, allow it to warm up for 2 minutes with the probe in a clean atmosphere. This lets the temperature sensor in the detector stabilize.
- The calibration check should be done in the "Search 2" mode. Once that is done, the other check modes do not need calibrating.
- When leak checking through the HVAC module drain hose, avoid drawing water into the probe. Water can damage the internal pump and sensor.
- Avoid creasing the flexible probe extension. Creases can restrict air flow and give false readings.
- Because the detector recalibrates itself for ambient gases, it may be necessary to move the detector away from the leak to clear the sensor. Once the sensor has cleared, recheck the suspected leak.
- When removing the clear probe tip, be careful not to lose the flow ball.
- R-134a is heavier than air; always check below and to the sides of all potential leak sources.
- Halogen leak detectors are sensitive to chemicals: windshield washing solutions, solvents/cleaners, and some vehicle adhesives. Keep these chemicals out of the area when doing leak detection.

GETtheMANUALS.org

Fluorescent Dye Usage Tips

- Use only Tracer-Stick single dose fluorescent dye capsules from Tracerline®. Other dyes contain solvents that may contaminate the refrigerant oil, leading to component failure.
- Adding excessive amounts of dye can damage the A/C compressor.
- PAG oil is water soluble, so condensation on the evaporator core or the refrigerant lines may wash the PAG oil and fluorescent dye away from the actual leak. Condensation may also carry dye through the HVAC module drain.
- After checking and repairing leaks, thoroughly clean any residual dye from the areas where leaks were found. Use GLO-AWAY dye cleaner, from Tracerline®, and hot water to remove the dye (follow the instructions on the bottle). Residual dye stains can cause misdiagnosis of any future A/C system leaks.
- If any refrigerant dye contacts an exterior paint surface, remove it by doing this:
  - Carefully wash the affected surfaces to remove any dirt, and to prevent paint scratching.
  - Mix water and isopropyl alcohol in a 50/50 mixture. Soak a soft 100 % cotton towel with the water/alcohol mixture, and place the cloth on the affected areas to remove the dye.
  - After removing the dye with the water/alcohol-soaked cloth, carefully wash the affected areas, and check that there is no remaining dye.

1. With the engine OFF, use a halogen leak detector first to detect the leak source. Follow a continuous path in order to ensure that you will not miss any possible leaks. Test the following areas of the system for leaks:

Possible Leak Area	Diagnostic Procedure with the Leak Detector	Notes
Service ports	• Check the service ports with caps installed • If the detector "sniffs" a leak, use fluorescent dye to confirm it	When capping the service ports, ensure that the seals on the port caps are in place, and that the caps are tight. The caps are used as the final seals in the system
A/C condenser	If the detector "sniffs" a leak, use fluorescent dye to confirm it	• Check for joints or connections coated with oily dust • Check for damaged and corroded areas • Check all fittings, couplings, brazed/welded areas and areas around attachment points • Move the probe slowly (1 in/second or less), and keep it within 1/4 in of the component being checked. This maximizes the chance of detecting a leak • If you detect a leak, blow compressed air over the area, then recheck for leaks. For large leaks, clearing the area with compressed air may help you pinpoint the leak source
	• Check at the evaporator	

GETtheMANUALS.org

Evaporator	drain hose • Check at the passenger's side vent and turn the blower on at low speed	
A/C lines	• Wiggle the rubber hoses when checking crimped metal ends • If the detector "sniffs" a leak, use fluorescent dye to confirm it	• Check all fittings, couplings, pressure switches, brazed/welded areas, and areas around attachment points on A/C lines and components • Check for damaged and corroded areas • Move the probe slowly (1 in/second or less), and keep it within 1/4 in of the component being checked. This maximizes the chance of detecting a leak

2. Close the quick coupler valves, then disconnect the quick couplers from the vehicle service ports.
3. Attach the universal connect set, from the Optimax Jr. Leak Detection Kit, to the service valve fitting. Close the control valve (the black knob on the connect set).
4. Attach the charging station low pressure hose quick coupler to the service valve fitting, and open the quick coupler valve. Evacuate the connect set using the charging station vacuum pump, then close the quick coupler valve.
5. Detach the universal connect set, and install a Tracer-Stick® dye capsule between the connect set and the service valve fitting (see the manufacturer's instructions for more detail).
6. Attach the quick coupler on the universal connect set to the low pressure service port on the vehicle. Open the charging station low pressure hose quick coupler valve, but do not open the control valve.
7. Start the engine, and set the A/C system to maximum cooling. Open the control valve to let refrigerant and the dye enter the A/C system through the low pressure service port. Close the control valve when the Tracer-Stick® dye capsule is empty.
8. Run the engine and A/C system for 15 minutes to thoroughly circulate the dye. Then shut the engine off, and inspect the following areas of the system for leaks:

NOTE:

- **Check for leaks in a dark work area, and use the UV light and the special glasses from the leak check kit. Other UV lights may not work well with the Tracer-Stick® dye.**
- **Small leaks may take up to 1 week of vehicle operation (with normal A/C use) to become visible.**

Possible Leak Area	Diagnostic Procedure with Fluorescent Dye
Service ports	If a leak is found, replace the cap/o-ring seal or A/C line as needed
A/C lines	• Use a permanent marker pen to circle the leak area • If a leak is found, remove and replace the A/C line

GETtheMANUALS.org

A/C condenser	• If a leak is found, remove the A/C condenser • Determine whether leak is in the A/C condenser or the receiver/dryer • Use a permanent marker pen to circle the leak area • Replace either the receiver/dryer, or the A/C condenser, depending upon which is leaking
A/C compressor	• Check for leaks at all of the A/C compressor joints, the clutch center, the A/C compressor front housing bolts, and the scroll bolts on the back of the A/C compressor • If a leak is found, use a permanent marker pen to circle the leak area • If the A/C compressor relief valve appears to be leaking, determine whether the leak is coming from the relief valve, or the joint between the A/C compressor casing and the valve. If the leak is from the relief valve, check the A/C system pressures, and refer to the pressure test table in the A/C system test. If the leak is from the casing/valve joint, replace the A/C compressor relief valve • If the leak is coming from the suction hose and/or discharge hose fittings on the A/C compressor, clean the A/C fittings and replace the suction/discharge fitting O-rings • For all other A/C compressor leaks, remove and replace the A/C compressor
Evaporator	• Start checking for evaporator leaks by illuminating the evaporator drain tube area • If a leak is found, remove the evaporator core • Determine whether leak is from evaporator or expansion valve • Use a permanent marker pen to circle leak area • Replace the expansion valve, or the evaporator core, depending upon which is leaking

17. A/C System - Test
    1. Insert a thermometer (A) in the center vent.
    2. Place a hygro-thermometer (B) near the blower unit's recirculation inlet duct.
    3. Test conditions:
        - Move the vehicle out of direct sunlight and let it cool down to the surrounding (ambient) temperature. If necessary, wash the vehicle to cool it down more quickly.
        - The blower intake temperature must be at least 68°F (20°C).
        - Open the hood.
        - Open the front doors.
        - Start the engine.
        - Set the temperature control dial or temperature control button to MAX COOL, the mode control button to VENT, and the recirculation control button to RECIRCULATE.
        - Turn the A/C button on and the fan control dial or fan control button to Max.

GETtheMANUALS.org

- Run the engine at 1, 500 rpm.
- No driver or passengers in vehicle.

Fig. 100: Checking Delivery Temperature From Thermometer In Center Vent
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Inspect the A/C components for the following conditions:
   - A/C compressor clutch not engaged.
   - Abnormal frost areas.
   - Unusual noises.

   If you observe any of these conditions, refer to the Symptom Troubleshooting Index.

5. After running the air conditioning for 10 minutes under the above test conditions, read the delivery temperature from the thermometer in the center vent, the intake temperature near the blower unit, and the discharge (high) and suction (low) pressures on the A/C gauges.
6. To complete the vent (delivery)/intake temperature chart:
   - Mark the vent (delivery) temperature on the vertical line.
   - Mark the intake temperature on the bottom line.
   - Draw a vertical line from the intake temperature mark.
   - Draw a horizontal line from the vent (delivery) temperature mark until it intersects the vertical line.

   NOTE: The vent temperature and intake temperature should intersect in the shaded area. Any measurements outside the line may

GETtheMANUALS.org

indicate the need for further inspection.

Fig. 101: Intake Temperature Versus Vent (Delivery) Temperature Graph
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. To complete the high side (discharge) pressure/intake temperature chart:
   - Mark the high side (discharge) pressure on the vertical line.
   - Mark the intake temperature on the bottom line.
   - Draw a vertical line from the intake temperature mark.
   - Draw a horizontal line from the high side (discharge) pressure mark until it intersects the vertical line.

NOTE: **The high side pressure and intake temperature should intersect in the shaded area. Any measurements outside the line may indicate the need for further inspection.**

GETtheMANUALS.org

Fig. 102: Intake Temperature Versus High Side (Discharge) Pressure Graph
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. To complete the low side (suction) pressure/intake temperature chart:
   - Mark the low side (suction) pressure along the vertical line.
   - Mark the intake temperature along the bottom line.
   - Draw a vertical line from the intake temperature mark.
   - Draw a horizontal line from the low side (suction) pressure mark until it intersects the vertical line.

NOTE: **The low side pressure and intake temperature should intersect in the shaded area. Any measurements outside the line may indicate the need for further inspection.**

A/C LINE REMOVAL AND INSTALLATION

REPLACEMENT

1. A/C Line - Replacement

GETtheMANUALS.org

① Discharge hose to the A/C compressor: 9.8 N·m (1.00 kgf·m, 7.2 lbf·ft)
② Discharge hose to the A/C condenser: 9.8 N·m (1.00 kgf·m, 7.2 lbf·ft)
③ Receiver line to the A/C condenser: 9.8 N·m (1.00 kgf·m, 7.2 lbf·ft)
④ A/C pressure sensor to receiver line: 11 N·m (1.1 kgf·m, 8 lbf·ft)
⑤ Receiver line to the A/C line: 13 N·m (1.3 kgf·m, 10 lbf·ft)
⑥ A/C lines to the evaporator: 9.8 N·m (1.00 kgf·m, 7.2 lbf·ft)
⑦ A/C line to the suction hose: 32 N·m (3.3 kgf·m, 24 lbf·ft)
⑧ Suction hose to the A/C compressor: 9.8 N·m (1.00 kgf·m, 7.2 lbf·ft)
⑨ A/C compressor to the water passage: 22 N·m (2.2 kgf·m, 16 lbf·ft)
⑩ A/C compressor to the A/C compressor bracket: 22 N·m (2.2 kgf·m, 16 lbf·ft)
⑪ A/C compressor bracket to the engine block: 45 N·m (4.6 kgf·m, 33 lbf·ft)

5. Climate Control Self-Diagnostic Function

How to Use the Self-Diagnostic Function to check for DTCs

1. Turn the ignition switch to LOCK (0) and then back to ON (II).
2. Press and hold the ON/OFF button, then within 10 seconds press and release the REAR WINDOW DEFOGGER button five times. Release the ON/OFF button.
3. All LCD segments come on for 2 seconds, then the self-diagnostic function begins.

NOTE:

- **The self-diagnostic test could take up to about 90 seconds to run.**
- **The blower motor will run at various speeds regardless of what the panel is displaying.**
- **If there is any problem in the system, the system flashes 88. Refer to checking for DTCs.**
- **If there are no problems detected, the segments will not illuminate, and the system will appear to be turned off.**

Fig. 159: Identifying Temperature Indicator, Auto, Recirculation, Rear Window Defogger And On/Off Button
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Canceling the Self-Diagnostic Function

4. Turn the ignition switch to LOCK (0) to cancel the self-diagnostic function. After completing the repair work, run the self-diagnostic function again to make sure that there are no other DTCs.

Checking for DTCs

The temperature indicator display indicates single or multiple DTCs. If no DTCs are present, the indicator remains blank.

GETtheMANUALS.org

NOTE: **If temperature indicator segments 05, 07, 09, 40, 43, 49, 55, and 89 are on at the some time, there may be an open in the sensor common ground wire.**

C0	Climate control unit internal error

Displaying Sensor Inputs at the Climate Control Unit

The climate control unit has a mode that displays the sensor inputs it receives. This mode shows you what the climate control unit is receiving from each of the sensors, one at a time, and it can help you determine if a sensor is faulty.

Checks Before Using the Sensor Input Display Mode

1. Turn the ignition switch to ON (II), and check the recirculation door function; press the RECIRCULATION button to switch from FRESH to RECIRC. The air volume and sound should change slightly.
2. Set the temperature control dial to the desired test temperature:
   - "Lo" temperature setting will default to MAX COOL, VENT, and RECIRC (A/C on) or FRESH (A/C off).
   - "Hi" temperature setting will default to MAX HOT, HEAT or HEAT/DEF, and FRESH.
   - 58 through 86 °F (14 through 30 °C) settings will use the automatic climate control logic.
3. Turn the ignition switch to LOCK (0).

Run the Sensor Input Display Mode

1. Turn the ignition switch to LOCK (0).
2. Press and hold both the AUTO and RECIRCULATION CONTROL buttons, then start the engine.
3. After the engine starts, release both buttons. The climate control unit will flash the sensor number and then the value for that sensor. Record the value displayed.
4. To advance to the next sensor, press the REAR WINDOW DEFOGGER button.

NOTE:

- **The sensor values will be displayed in degrees Celsius (°C) or an alphanumeric code. Use the chart to convert the value to degrees Fahrenheit (°F).**
- **If the sensor value displays "Er", this indicates there is an open or short in the circuit or sensor. Check for DTCs using the HDS, or use the climate control self-diagnostic function.**
- **If necessary, compare the sensor input display to a known-good vehicle under the same test conditions.**
- **If the sensor is out of the normal range, refer to the sensor test or substitute a known-good sensor, and recheck.**

REMOVAL

CAUTION:

- **Air conditioning refrigerant or lubricant vapor can irritate your eyes, nose, or throat.**
- **Be careful when connecting service equipment.**
- **Do not breathe refrigerant or vapor.**

NOTE:

- **If accidental system discharge occurs, ventilate the work area before resuming service.**
- **Additional health and safety information may be obtained from the refrigerant and lubricant manufacturers.**

1. R-134a Refrigerant Recovery/Recycling/Charging Station - Connection
    1. Connect an R-134a refrigerant recovery/recycling/charging station (A) to the high-pressure service port (B) and the low-pressure service port (C), as shown, following the equipment manufacturer's instructions.

GETtheMANUALS.org

Fig. 167: Identifying Refrigerant Recovery/Recycling/Charging Station, High And Low Pressure Service Port
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. A/C Refrigerant - Recovery
    1. Recover the refrigerant from the A/C system.
    2. Measure the amount of refrigerant oil removed from the A/C system after the recovery process is completed. Be sure to put the same amount of new refrigerant oil back into the A/C system before charging.
3. A/C Line - Evaporator Side
    1. Remove the bolt.

GETtheMANUALS.org

14. Evaporator Core
    1. Carefully pull out the evaporator core (A) without bending the lines.
    2. Remove the plate (B).

Fig. 186: Identifying Evaporator Core And Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

15. Evaporator Temperature Sensor
    1. Remove the evaporator temperature sensor (A).

Fig. 187: Identifying Evaporator Temperature Sensor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

CAUTION:

- **Air conditioning refrigerant or lubricant vapor can irritate your eyes, nose, or throat.**
- **Be careful when connecting service equipment.**
- **Do not breathe refrigerant or vapor.**
- **Do not operate the leak detector near flammable vapors. Its sensor operates at high temperatures, and could ignite the vapors, resulting in personal injury and/or damage to the equipment.**

NOTE:

- **If an accidental system discharge occurs, ventilate the work area before resuming service.**
- **Additional health and safety information may be obtained from the refrigerant and lubricant manufacturers.**
- **Check the system for leaks using an R-134a refrigerant leak detector with an accuracy of 14 g (0.5 oz) per year or better.**
- **If you are installing a new evaporator core, add refrigerant oil.**
- **Replace the O-rings with new ones at each fitting, and apply a thin coat of refrigerant oil before installing them. Be sure to use the correct O-rings for HFC-134a (R-134a) to avoid leakage.**
- **Use only PAG refrigerant oil for HFC-134a A/C systems.**
- **To avoid contamination, do not return the oil to the container once dispensed, and never mix it with other refrigerant oils.**
- **Immediately after using the oil, reinstall the cap on the container, and seal**

GETtheMANUALS.org

it to avoid moisture absorption.

- **Do not spill the refrigerant oil on the vehicle; it may damage the paint; if the refrigerant oil contacts the paint, wash it off immediately.**
- **Make sure that there is no air leakage.**

1. A/C Refrigerant Oil - Replacement

   Recommended PAG oil: SP-10

   P/N 38897-P13-A01AH: 120 mL (4 fl oz)

   It is important to have the correct amount of refrigerant oil in the A/C system to ensure proper lubrication of the A/C compressor. Too little oil damages the A/C compressor; too much oil reduces the cooling capacity of the system, and can produce high vent temperatures.

   - To avoid contamination, do not return the oil to the container once dispensed, and never mix it with other refrigerant oils.
   - Immediately after using the oil, reinstall the cap on the container, and seal it to avoid moisture absorption.
   - Do not spill the refrigerant oil on the vehicle; it may damage the paint; if it gets on the paint, wash it off immediately.

   Add the recommended refrigerant oil in the amount listed if you replace any of the following parts.

A/C condenser (including dryer desiccant).....	25 mL (5/6 fl oz)
Evaporator.....	40 mL (1 1/3 fl oz)
Line or hose.....	10 mL (1/3 fl oz)
Dryer desiccant.....	10 mL (1/3 fl oz)
Leakage repair.....	25 mL (5/6 fl oz)
A/C compressor.....	Since the oil separator is equipped inside the A/C compressor for this vehicle, oil drainage is unnecessary at the time of A/C compressor replacement.

2. Evaporator Temperature Sensor
   1. Install the evaporator temperature sensor (A) in the evaporator core (B), and note these items:
      - When the evaporator temperature sensor is installed into the new evaporator core, set the sensor into the factory-preset position (C, D).
      - When the evaporator temperature sensor is reinstalled into the original evaporator core, set the sensor into the new position (E, F) because the fin may be deforming by the previous installation.

      Installing into the factory-preset position

12. R-134a Refrigerant Recovery/Recycling/Charging Station - Connection
    1. Connect an R-134a refrigerant recovery/recycling/charging station (A) to the high-pressure service port (B) and the low-pressure service port (C), as shown, following the equipment manufacturer's instructions.

Fig. 205: Identifying Refrigerant Recovery/Recycling/Charging Station, High And Low

GETtheMANUALS.org

<u>Pressure Service Port</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. A/C System Evacuation
    1. Evacuate the system. The vacuum pump should run for a minimum of 30 minutes to eliminate all moisture from the system. When the suction gauge reads -93.3 kPa (-700 mmHg, - 27.55 inHg) for at least 30 minutes, close all valves, and turn off the vacuum pump.
    2. If the suction gauge dose not reach approximately -93.3 kPa (-700 mmHg, -27.55 inHg) in 15 minutes, there is probably a large leak in the system. Partially charge the system, and check for leaks.
14. A/C Refrigerant - Charging
    1. Charge the system with the specified amount of R-134a refrigerant. Do not overcharge the system; the A/C compressor will be damaged.

       Select the appropriate units of measure for your refrigerant charging station.

       Refrigerant Capacity:

       385 to 435 g

       13.6 to 15.4 oz

       0.385 to 0.435 kg

       0.849 to 0.959 lbs

15. A/C Refrigerant - Leak Check

Leak Detector Usage Tips (Refer to the Operator's Manual for complete operating instructions)

- Position the vehicle in a wind-free work area. This will aid in detecting small leaks.
- When using the leak detector for the first time, allow it to warm up for 2 minutes with the probe in a clean atmosphere. This lets the temperature sensor in the detector stabilize.
- The calibration check should be done in the "Search 2" mode. Once that is done, the other check modes do not need calibrating.
- When leak checking through the HVAC module drain hose, avoid drawing water into the probe. Water can damage the internal pump and sensor.
- Avoid creasing the flexible probe extension. Creases can restrict air flow and give false readings.
- Because the detector recalibrates itself for ambient gases, it may be necessary to move the detector away from the leak to clear the sensor. Once the sensor has cleared, recheck the suspected leak.
- When removing the clear probe tip, be careful not to lose the flow ball.
- R-134a is heavier than air; always check below and to the sides of all potential leak sources.
- Halogen leak detectors are sensitive to chemicals: windshield washing solutions, solvents/cleaners, and some vehicle adhesives. Keep these chemicals out of the area when doing leak detection.

GETtheMANUALS.org

Fluorescent Dye Usage Tips

- Use only Tracer-Stick single dose fluorescent dye capsules from Tracerline®. Other dyes contain solvents that may contaminate the refrigerant oil, leading to component failure.
- Adding excessive amounts of dye can damage the A/C compressor.
- PAG oil is water soluble, so condensation on the evaporator core or the refrigerant lines may wash the PAG oil and fluorescent dye away from the actual leak. Condensation may also carry dye through the HVAC module drain.
- After checking and repairing leaks, thoroughly clean any residual dye from the areas where leaks were found. Use GLO-AWAY dye cleaner, from Tracerline®, and hot water to remove the dye (follow the instructions on the bottle). Residual dye stains can cause misdiagnosis of any future A/C system leaks.
- If any refrigerant dye contacts an exterior paint surface, remove it by doing this:
  - Carefully wash the affected surfaces to remove any dirt, and to prevent paint scratching.
  - Mix water and isopropyl alcohol in a 50/50 mixture. Soak a soft 100 % cotton towel with the water/alcohol mixture, and place the cloth on the affected areas to remove the dye.
  - After removing the dye with the water/alcohol-soaked cloth, carefully wash the affected areas, and check that there is no remaining dye.

1. With the engine OFF, use a halogen leak detector first to detect the leak source. Follow a continuous path in order to ensure that you will not miss any possible leaks. Test the following areas of the system for leaks:

Possible Leak Area	Diagnostic Procedure with the Leak Detector	Notes
Service ports	• Check the service ports with caps installed • If the detector "sniffs" a leak, use fluorescent dye to confirm it	When capping the service ports, ensure that the seals on the port caps are in place, and that the caps are tight. The caps are used as the final seals in the system
A/C condenser	If the detector "sniffs" a leak, use fluorescent dye to confirm it	• Check for joints or connections coated with oily dust • Check for damaged and corroded areas • Check all fittings, couplings, brazed/welded areas and areas around attachment points • Move the probe slowly (1 in/second or less), and keep it within 1/4 in of the component being checked. This maximizes the chance of detecting a leak • If you detect a leak, blow compressed air over the area, then recheck for leaks. For large leaks, clearing the area with compressed air may help you pinpoint the leak source
	• Check at the evaporator	

GETtheMANUALS.org

Evaporator	drain hose • Check at the passenger's side vent and turn the blower on at low speed	
A/C lines	• Wiggle the rubber hoses when checking crimped metal ends • If the detector "sniffs" a leak, use fluorescent dye to confirm it	• Check all fittings, couplings, pressure switches, brazed/welded areas, and areas around attachment points on A/C lines and components • Check for damaged and corroded areas • Move the probe slowly (1 in/second or less), and keep it within 1/4 in of the component being checked. This maximizes the chance of detecting a leak

2. Close the quick coupler valves, then disconnect the quick couplers from the vehicle service ports.
3. Attach the universal connect set, from the Optimax Jr. Leak Detection Kit, to the service valve fitting. Close the control valve (the black knob on the connect set).
4. Attach the charging station low pressure hose quick coupler to the service valve fitting, and open the quick coupler valve. Evacuate the connect set using the charging station vacuum pump, then close the quick coupler valve.
5. Detach the universal connect set, and install a Tracer-Stick® dye capsule between the connect set and the service valve fitting (see the manufacturer's instructions for more detail).
6. Attach the quick coupler on the universal connect set to the low pressure service port on the vehicle. Open the charging station low pressure hose quick coupler valve, but do not open the control valve.
7. Start the engine, and set the A/C system to maximum cooling. Open the control valve to let refrigerant and the dye enter the A/C system through the low pressure service port. Close the control valve when the Tracer-Stick® dye capsule is empty.
8. Run the engine and A/C system for 15 minutes to thoroughly circulate the dye. Then shut the engine off, and inspect the following areas of the system for leaks:

NOTE:

- **Check for leaks in a dark work area, and use the UV light and the special glasses from the leak check kit. Other UV lights may not work well with the Tracer-Stick® dye.**
- **Small leaks may take up to 1 week of vehicle operation (with normal A/C use) to become visible.**

Possible Leak Area	Diagnostic Procedure with Fluorescent Dye
Service ports	If a leak is found, replace the cap/o-ring seal or A/C line as needed
A/C lines	• Use a permanent marker pen to circle the leak area • If a leak is found, remove and replace the A/C line

GETtheMANUALS.org

A/C condenser	• If a leak is found, remove the A/C condenser • Determine whether leak is in the A/C condenser or the receiver/dryer • Use a permanent marker pen to circle the leak area • Replace either the receiver/dryer, or the A/C condenser, depending upon which is leaking
A/C compressor	• Check for leaks at all of the A/C compressor joints, the clutch center, the A/C compressor front housing bolts, and the scroll bolts on the back of the A/C compressor • If a leak is found, use a permanent marker pen to circle the leak area • If the A/C compressor relief valve appears to be leaking, determine whether the leak is coming from the relief valve, or the joint between the A/C compressor casing and the valve. If the leak is from the relief valve, check the A/C system pressures, and refer to the pressure test table in the A/C system test. If the leak is from the casing/valve joint, replace the A/C compressor relief valve • If the leak is coming from the suction hose and/or discharge hose fittings on the A/C compressor, clean the A/C fittings and replace the suction/discharge fitting O-rings • For all other A/C compressor leaks, remove and replace the A/C compressor
Evaporator	• Start checking for evaporator leaks by illuminating the evaporator drain tube area • If a leak is found, remove the evaporator core • Determine whether leak is from evaporator or expansion valve • Use a permanent marker pen to circle leak area • Replace the expansion valve, or the evaporator core, depending upon which is leaking

16. A/C System - Test
    1. Insert a thermometer (A) in the center vent.
    2. Place a hygro-thermometer (B) near the blower unit's recirculation inlet duct.
    3. Test conditions:
        - Move the vehicle out of direct sunlight and let it cool down to the surrounding (ambient) temperature. If necessary, wash the vehicle to cool it down more quickly.
        - The blower intake temperature must be at least 68°F (20°C).
        - Open the hood.
        - Open the front doors.
        - Start the engine.
        - Set the temperature control dial or temperature control button to MAX COOL, the mode control button to VENT, and the recirculation control button to RECIRCULATE.
        - Turn the A/C button on and the fan control dial or fan control button to Max.

GETtheMANUALS.org

- Run the engine at 1, 500 rpm.
- No driver or passengers in vehicle.

Fig. 206: Checking Delivery Temperature From Thermometer In Center Vent
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Inspect the A/C components for the following conditions:
   - A/C compressor clutch not engaged.
   - Abnormal frost areas.
   - Unusual noises.

   If you observe any of these conditions, refer to the Symptom Troubleshooting Index.

5. After running the air conditioning for 10 minutes under the above test conditions, read the delivery temperature from the thermometer in the center vent, the intake temperature near the blower unit, and the discharge (high) and suction (low) pressures on the A/C gauges.
6. To complete the vent (delivery)/intake temperature chart:
   - Mark the vent (delivery) temperature on the vertical line.
   - Mark the intake temperature on the bottom line.
   - Draw a vertical line from the intake temperature mark.
   - Draw a horizontal line from the vent (delivery) temperature mark until it intersects the vertical line.

   NOTE: The vent temperature and intake temperature should intersect in the shaded area. Any measurements outside the line may

GETtheMANUALS.org

indicate the need for further inspection.

Fig. 207: Intake Temperature Versus Vent (Delivery) Temperature Graph
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. To complete the high side (discharge) pressure/intake temperature chart:
   - Mark the high side (discharge) pressure on the vertical line.
   - Mark the intake temperature on the bottom line.
   - Draw a vertical line from the intake temperature mark.
   - Draw a horizontal line from the high side (discharge) pressure mark until it intersects the vertical line.

NOTE: **The high side pressure and intake temperature should intersect in the shaded area. Any measurements outside the line may indicate the need for further inspection.**

GETtheMANUALS.org

Fig. 208: Intake Temperature Versus High Side (Discharge) Pressure Graph
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. To complete the low side (suction) pressure/intake temperature chart:
   - Mark the low side (suction) pressure along the vertical line.
   - Mark the intake temperature along the bottom line.
   - Draw a vertical line from the intake temperature mark.
   - Draw a horizontal line from the low side (suction) pressure mark until it intersects the vertical line.

NOTE: **The low side pressure and intake temperature should intersect in the shaded area. Any measurements outside the line may indicate the need for further inspection.**

REMOVAL

CAUTION:

- **Air conditioning refrigerant or lubricant vapor can irritate your eyes, nose, or throat.**
- **Be careful when connecting service equipment.**
- **Do not breathe refrigerant or vapor.**

NOTE:

- **If accidental system discharge occurs, ventilate the work area before resuming service.**
- **Additional health and safety information may be obtained from the refrigerant and lubricant manufacturers.**

1. R-134a Refrigerant Recovery/Recycling/Charging Station - Connection
    1. Connect an R-134a refrigerant recovery/recycling/charging station (A) to the high-pressure service port (B) and the low-pressure service port (C), as shown, following the equipment manufacturer's instructions.

GETtheMANUALS.org

Fig. 214: Identifying Refrigerant Recovery/Recycling/Charging Station, High And Low Pressure Service Port
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. A/C Refrigerant - Recovery
    1. Recover the refrigerant from the A/C system.
    2. Measure the amount of refrigerant oil removed from the A/C system after the recovery process is completed. Be sure to put the same amount of new refrigerant oil back into the A/C system before charging.
3. A/C Line - Evaporator Side
    1. Remove the bolt.

GETtheMANUALS.org

Fig. 215: Identifying A/C Line Mounting Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Disconnect the A/C line (A) with O-rings (B).

Fig. 216: Identifying A/C Line And O-Rings
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the stud bolt (A).

GETtheMANUALS.org

Fig. 217: Identifying A/C Line Stud Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Passenger's Dashboard Undercover
    1. Gently pull down the passenger's dashboard undercover (A) to detach the clips (B), then pull away the undercover to release the pins (C) from the holder (D).

Fig. 218: Identifying Passenger Dashboard Undercover, Holder, Pins And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Glove Box
    1. Remove the bolts (A).

GETtheMANUALS.org

Fig. 219: Identifying Glove Box Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Release both glove box stops (A) by pushing them in, then let the glove box (B) hang down.

Fig. 220: Releasing Glove Box Stops
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Detach the glove box damper hook (A), then remove the glove box (B).

GETtheMANUALS.org

Fig. 221: Removing Glove Box

6. Glove Box Frame
    1. Remove the glove box frame (A).

Fig. 222: Identifying Glove Box Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Passenger's Heater Duct
    1. Remove the passenger's heater duct (A).

GETtheMANUALS.org

Fig. 223: Identifying Passenger Heater Duct
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Cross Brace
    1. Cut the cross brace (A) in the glove box opening with diagonal cutters in the area shown, and remove it.

NOTE: Retain the cross brace to be reinstalled later.

Fig. 224: Identifying Cross Brace Cutting Position
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Blower Unit
    1. Disconnect the blower motor connector (A).

GETtheMANUALS.org

2. Detach the harness clip (B).

Fig. 225: Identifying Blower Motor Connector And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Disconnect the recirculation control motor connector (A).
4. Detach the harness clips (B).

Fig. 226: Identifying Recirculation Control Motor Connectors And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the blower unit (A).

GETtheMANUALS.org

Fig. 227: Identifying Blower Unit
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Heater Core Cover
    1. Remove the heater core cover (A).

Fig. 228: Identifying Heater Core Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

11. Passenger's Air Mix Control Motor (Climate Control)
    1. Disconnect the passenger's air mix control motor connector (A).
    2. Remove the passenger's air mix control motor (B).

Fig. 229: Identifying Passenger Air Mix Control Motor And Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Expansion Valve Cover
    1. Disconnect the evaporator temperature sensor connector (A).
    2. Detach the connector clip (B).
    3. Disconnect the power transistor connector (C).
    4. Remove the expansion valve cover (D), and the seal (E).

GETtheMANUALS.org

Fig. 230: Identifying Evaporator Temperature Sensor Connector, Power Transistor Connector, Expansion Valve Cover, Seal And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Expansion Valve
    1. Remove the bolts.

Fig. 231: Identifying Expansion Valve Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the expansion valve (A) with O-rings (B) and the insulator (C).

GETtheMANUALS.org

Fig. 232: Removing Expansion Valve
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Installation

CAUTION:

- **Air conditioning refrigerant or lubricant vapor can irritate your eyes, nose, or throat.**
- **Be careful when connecting service equipment.**
- **Do not breathe refrigerant or vapor.**
- **Do not operate the leak detector near flammable vapors. Its sensor operates at high temperatures, and could ignite the vapors, resulting in personal injury and/or damage to the equipment.**

NOTE:

- **If an accidental system discharge occurs, ventilate the work area before resuming service.**
- **Additional health and safety information may be obtained from the refrigerant and lubricant manufacturers.**
- **Check the system for leaks using an R-134a refrigerant leak detector with an accuracy of 14 g (0.5 oz) per year or better.**
- **Replace the O-rings with new ones at each fitting, and apply a thin coat of refrigerant oil before installing them. Be sure to use the correct O-rings for HFC-134a (R-134a) to avoid leakage.**
- **Use only PAG refrigerant oil for HFC-134a A/C systems.**
- **To avoid contamination, do not return the oil to the container once dispensed, and never mix it with other refrigerant oils.**
- **Immediately after using the oil, reinstall the cap on the container, and seal it to avoid moisture absorption.**

GETtheMANUALS.org

- **Do not spill the refrigerant oil on the vehicle; it may damage the paint; if the refrigerant oil contacts the paint, wash it off immediately.**
- **Make sure that there is no air leakage.**

1. Expansion Valve
    1. Install the expansion valve (A) with new O-rings (B) that are lubricated with clean refrigerant oil and the insulator (C).

Fig. 233: Installing Expansion Valve
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the bolts.

Fig. 234: Identifying Expansion Valve Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

2. Expansion Valve Cover
    1. Install the expansion valve cover (A), and the new seal (B).
    2. Connect the power transistor connector (C).
    3. Install the connector clip (D).
    4. Connect the evaporator temperature sensor connector (E).

Fig. 235: Identifying Evaporator Temperature Sensor Connector, Power Transistor Connector, Expansion Valve Cover, Seal And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Passenger's Air Mix Control Motor (Climate Control)
    1. Align the passenger's air mix control motor (A) with the gear, then install the motor.
    2. Connect the passenger's air mix control motor connector (B).
    3. After installation, make sure the motor runs smoothly.

GETtheMANUALS.org

9. R-134a Refrigerant Recovery/Recycling/Charging Station - Connection
    1. Connect an R-134a refrigerant recovery/recycling/charging station (A) to the high-pressure service port (B) and the low-pressure service port (C), as shown, following the equipment manufacturer's instructions.

Fig. 246: Identifying Refrigerant Recovery/Recycling/Charging Station, High And Low

GETtheMANUALS.org

<u>Pressure Service Port</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. A/C System Evacuation
    1. Evacuate the system. The vacuum pump should run for a minimum of 30 minutes to eliminate all moisture from the system. When the suction gauge reads -93.3 kPa (-700 mmHg, - 27.55 inHg) for at least 30 minutes, close all valves, and turn off the vacuum pump.
    2. If the suction gauge dose not reach approximately -93.3 kPa (-700 mmHg, -27.55 inHg) in 15 minutes, there is probably a large leak in the system. Partially charge the system, and check for leaks.
11. A/C Refrigerant - Charging
    1. Charge the system with the specified amount of R-134a refrigerant. Do not overcharge the system; the A/C compressor will be damaged.

       Select the appropriate units of measure for your refrigerant charging station.

       Refrigerant Capacity:

       385 to 435 g

       13.6 to 15.4 oz

       0.385 to 0.435 kg

       0.849 to 0.959 lbs

12. A/C Refrigerant - Leak Check

Leak Detector Usage Tips (Refer to the Operator's Manual for complete operating instructions)

- Position the vehicle in a wind-free work area. This will aid in detecting small leaks.
- When using the leak detector for the first time, allow it to warm up for 2 minutes with the probe in a clean atmosphere. This lets the temperature sensor in the detector stabilize.
- The calibration check should be done in the "Search 2" mode. Once that is done, the other check modes do not need calibrating.
- When leak checking through the HVAC module drain hose, avoid drawing water into the probe. Water can damage the internal pump and sensor.
- Avoid creasing the flexible probe extension. Creases can restrict air flow and give false readings.
- Because the detector recalibrates itself for ambient gases, it may be necessary to move the detector away from the leak to clear the sensor. Once the sensor has cleared, recheck the suspected leak.
- When removing the clear probe tip, be careful not to lose the flow ball.
- R-134a is heavier than air; always check below and to the sides of all potential leak sources.
- Halogen leak detectors are sensitive to chemicals: windshield washing solutions, solvents/cleaners, and some vehicle adhesives. Keep these chemicals out of the area when doing leak detection.

GETtheMANUALS.org

Fluorescent Dye Usage Tips

- Use only Tracer-Stick single dose fluorescent dye capsules from Tracerline®. Other dyes contain solvents that may contaminate the refrigerant oil, leading to component failure.
- Adding excessive amounts of dye can damage the A/C compressor.
- PAG oil is water soluble, so condensation on the evaporator core or the refrigerant lines may wash the PAG oil and fluorescent dye away from the actual leak. Condensation may also carry dye through the HVAC module drain.
- After checking and repairing leaks, thoroughly clean any residual dye from the areas where leaks were found. Use GLO-AWAY dye cleaner, from Tracerline®, and hot water to remove the dye (follow the instructions on the bottle). Residual dye stains can cause misdiagnosis of any future A/C system leaks.
- If any refrigerant dye contacts an exterior paint surface, remove it by doing this:
  - Carefully wash the affected surfaces to remove any dirt, and to prevent paint scratching.
  - Mix water and isopropyl alcohol in a 50/50 mixture. Soak a soft 100 % cotton towel with the water/alcohol mixture, and place the cloth on the affected areas to remove the dye.
  - After removing the dye with the water/alcohol-soaked cloth, carefully wash the affected areas, and check that there is no remaining dye.

1. With the engine OFF, use a halogen leak detector first to detect the leak source. Follow a continuous path in order to ensure that you will not miss any possible leaks. Test the following areas of the system for leaks:

Possible Leak Area	Diagnostic Procedure with the Leak Detector	Notes
Service ports	• Check the service ports with caps installed • If the detector "sniffs" a leak, use fluorescent dye to confirm it	When capping the service ports, ensure that the seals on the port caps are in place, and that the caps are tight. The caps are used as the final seals in the system
A/C condenser	If the detector "sniffs" a leak, use fluorescent dye to confirm it	• Check for joints or connections coated with oily dust • Check for damaged and corroded areas • Check all fittings, couplings, brazed/welded areas and areas around attachment points • Move the probe slowly (1 in/second or less), and keep it within 1/4 in of the component being checked. This maximizes the chance of detecting a leak • If you detect a leak, blow compressed air over the area, then recheck for leaks. For large leaks, clearing the area with compressed air may help you pinpoint the leak source
	• Check at the evaporator	

GETtheMANUALS.org

Evaporator	drain hose • Check at the passenger's side vent and turn the blower on at low speed	
A/C lines	• Wiggle the rubber hoses when checking crimped metal ends • If the detector "sniffs" a leak, use fluorescent dye to confirm it	• Check all fittings, couplings, pressure switches, brazed/welded areas, and areas around attachment points on A/C lines and components • Check for damaged and corroded areas • Move the probe slowly (1 in/second or less), and keep it within 1/4 in of the component being checked. This maximizes the chance of detecting a leak

2. Close the quick coupler valves, then disconnect the quick couplers from the vehicle service ports.
3. Attach the universal connect set, from the Optimax Jr. Leak Detection Kit, to the service valve fitting. Close the control valve (the black knob on the connect set).
4. Attach the charging station low pressure hose quick coupler to the service valve fitting, and open the quick coupler valve. Evacuate the connect set using the charging station vacuum pump, then close the quick coupler valve.
5. Detach the universal connect set, and install a Tracer-Stick® dye capsule between the connect set and the service valve fitting (see the manufacturer's instructions for more detail).
6. Attach the quick coupler on the universal connect set to the low pressure service port on the vehicle. Open the charging station low pressure hose quick coupler valve, but do not open the control valve.
7. Start the engine, and set the A/C system to maximum cooling. Open the control valve to let refrigerant and the dye enter the A/C system through the low pressure service port. Close the control valve when the Tracer-Stick® dye capsule is empty.
8. Run the engine and A/C system for 15 minutes to thoroughly circulate the dye. Then shut the engine off, and inspect the following areas of the system for leaks:

NOTE:

- **Check for leaks in a dark work area, and use the UV light and the special glasses from the leak check kit. Other UV lights may not work well with the Tracer-Stick® dye.**
- **Small leaks may take up to 1 week of vehicle operation (with normal A/C use) to become visible.**

Possible Leak Area	Diagnostic Procedure with Fluorescent Dye
Service ports	If a leak is found, replace the cap/o-ring seal or A/C line as needed
A/C lines	• Use a permanent marker pen to circle the leak area • If a leak is found, remove and replace the A/C line

GETtheMANUALS.org

A/C condenser	• If a leak is found, remove the A/C condenser • Determine whether leak is in the A/C condenser or the receiver/dryer • Use a permanent marker pen to circle the leak area • Replace either the receiver/dryer, or the A/C condenser, depending upon which is leaking

   - Draw a horizontal line from the vent (delivery) temperature mark until it intersects the vertical line.

   NOTE: The vent temperature and intake temperature should intersect in the shaded area. Any measurements outside the line may

GETtheMANUALS.org

indicate the need for further inspection.

Fig. 248: Intake Temperature Versus Vent (Delivery) Temperature Graph
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. To complete the high side (discharge) pressure/intake temperature chart:
   - Mark the high side (discharge) pressure on the vertical line.
   - Mark the intake temperature on the bottom line.
   - Draw a vertical line from the intake temperature mark.
   - Draw a horizontal line from the high side (discharge) pressure mark until it intersects the vertical line.

NOTE: **The high side pressure and intake temperature should intersect in the shaded area. Any measurements outside the line may indicate the need for further inspection.**

GETtheMANUALS.org

Fig. 249: Intake Temperature Versus High Side (Discharge) Pressure Graph
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. To complete the low side (suction) pressure/intake temperature chart:
   - Mark the low side (suction) pressure along the vertical line.
   - Mark the intake temperature along the bottom line.
   - Draw a vertical line from the intake temperature mark.
   - Draw a horizontal line from the low side (suction) pressure mark until it intersects the vertical line.

NOTE: **The low side pressure and intake temperature should intersect in the shaded area. Any measurements outside the line may indicate the need for further inspection.**

GETtheMANUALS.org

Fig. 250: Intake Temperature Versus Low Side (Suction) Pressure Graph

	Big Digit Hygro-Thermometer PYR445703, commercially available
	Throttle Pedal Depressor Tool B240B, commercially available
(1) These tools are available through the Honda Tool and Equipment Program; call 888-424-6857	

REMOVAL

CAUTION:

- **Air conditioning refrigerant or lubricant vapor can irritate your eyes, nose, or throat.**
- **Be careful when connecting service equipment.**
- **Do not breathe refrigerant or vapor.**

NOTE:

- **If accidental system discharge occurs, ventilate the work area before resuming service.**
- **Additional health and safety information may be obtained from the refrigerant and lubricant manufacturers.**

1. R-134a Refrigerant Recovery/Recycling/Charging Station - Connection
    1. Connect an R-134a refrigerant recovery/recycling/charging station (A) to the high-pressure service port (B) and the low-pressure service port (C), as shown, following the equipment manufacturer's instructions.

GETtheMANUALS.org

Fig. 255: Identifying Refrigerant Recovery/Recycling/Charging Station, High And Low Pressure Service Port
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. A/C Refrigerant - Recovery
    1. Recover the refrigerant from the A/C system.
    2. Measure the amount of refrigerant oil removed from the A/C system after the recovery process is completed. Be sure to put the same amount of new refrigerant oil back into the A/C system before charging.
3. A/C Line - Evaporator Side
    1. Remove the bolt.

GETtheMANUALS.org

Fig. 256: Identifying A/C Line Mounting Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Disconnect the A/C line (A) with O-rings (B).

Fig. 257: Identifying A/C Line And O-Rings
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the stud bolt (A).

GETtheMANUALS.org

Fig. 258: Identifying A/C Line Stud Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Passenger's Dashboard Undercover
    1. Gently pull down the passenger's dashboard undercover (A) to detach the clips (B), then pull away the undercover to release the pins (C) from the holder (D).

Fig. 259: Identifying Passenger Dashboard Undercover, Holder, Pins And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Glove Box
    1. Remove the bolts (A).

GETtheMANUALS.org

Fig. 260: Identifying Glove Box Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Release both glove box stops (A) by pushing them in, then let the glove box (B) hang down.

Fig. 261: Releasing Glove Box Stops
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Detach the glove box damper hook (A), then remove the glove box (B).

GETtheMANUALS.org

Fig. 262: Removing Glove Box
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Glove Box Frame
    1. Remove the glove box frame (A).

Fig. 263: Identifying Glove Box Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Passenger's Heater Duct
    1. Remove the passenger's heater duct (A).

GETtheMANUALS.org

Fig. 264: Identifying Passenger Heater Duct
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Cross Brace
    1. Cut the cross brace (A) in the glove box opening with diagonal cutters in the area shown, and remove it.

NOTE: Retain the cross brace to be reinstalled later.

Fig. 265: Identifying Cross Brace Cutting Position
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Blower Unit
    1. Disconnect the blower motor connector (A).

GETtheMANUALS.org

2. Detach the harness clip (B).

Fig. 266: Identifying Blower Motor Connector And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Disconnect the recirculation control motor connector (A).
4. Detach the harness clips (B).

Fig. 267: Identifying Recirculation Control Motor Connectors And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the blower unit (A).

GETtheMANUALS.org

Fig. 268: Identifying Blower Unit
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Heater Core Cover
    1. Remove the heater core cover (A).

Fig. 269: Identifying Heater Core Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

11. Passenger's Air Mix Control Motor (Climate Control)
    1. Disconnect the passenger's air mix control motor connector (A).
    2. Remove the passenger's air mix control motor (B).

Fig. 270: Identifying Passenger Air Mix Control Motor And Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Expansion Valve Cover
    1. Disconnect the evaporator temperature sensor connector (A).
    2. Detach the connector clip (B).
    3. Disconnect the power transistor connector (C).
    4. Remove the expansion valve cover (D), and the seal (E).

GETtheMANUALS.org

Fig. 271: Identifying Evaporator Temperature Sensor Connector, Power Transistor Connector, Expansion Valve Cover, Seal And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Expansion Valve
    1. Remove the bolts.

Fig. 272: Identifying Expansion Valve Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the expansion valve (A) with O-rings (B) and the insulator (C).

GETtheMANUALS.org

Fig. 273: Removing Expansion Valve
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Evaporator Core
    1. Carefully pull out the evaporator core (A) without bending the lines.
    2. Remove the plate (B).

Fig. 274: Identifying Evaporator Core And Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

15. Evaporator Temperature Sensor
    1. Remove the evaporator temperature sensor (A).

Fig. 275: Identifying Evaporator Temperature Sensor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TEST

1. Evaporator Temperature Sensor - Test
    1. Dip the sensor in ice water, and measure the resistance between terminals No. 1 and No. 2.
    2. Then pour warm water on the sensor, and check for a change in resistance.

Fig. 276: Checking Evaporator Temperature Sensor For Resistance Change
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. Compare the resistance readings with the specifications shown in the graph; the resistance should be within the specifications.

GETtheMANUALS.org

Fig. 277: Evaporator Temperature Sensor Resistance Graph
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. If the resistance is not as specified, replace the evaporator temperature sensor.

INSTALLATION

CAUTION:

- **Air conditioning refrigerant or lubricant vapor can irritate your eyes, nose, or throat.**
- **Be careful when connecting service equipment.**
- **Do not breathe refrigerant or vapor.**
- **Do not operate the leak detector near flammable vapors. Its sensor operates at high temperatures, and could ignite the vapors, resulting in personal injury and/or damage to the equipment.**

NOTE:

- **If an accidental system discharge occurs, ventilate the work area before resuming service.**
- **Additional health and safety information may be obtained from the refrigerant and lubricant manufacturers.**
- **Check the system for leaks using an R-134a refrigerant leak detector with an accuracy of 14 g (0.5 oz) per year or better.**
- **Replace the O-rings with new ones at each fitting, and apply a thin coat of refrigerant oil before installing them. Be sure to use the correct O-rings for HFC-134a (R-134a) to avoid leakage.**
- **Use only PAG refrigerant oil for HFC-134a A/C systems.**
- **To avoid contamination, do not return the oil to the container once dispensed, and never mix it with other refrigerant oils.**
- **Immediately after using the oil, reinstall the cap on the container, and seal it to avoid moisture absorption.**
- **Do not spill the refrigerant oil on the vehicle; it may damage the paint; if**

GETtheMANUALS.org

the refrigerant oil contacts the paint, wash it off immediately.

- **Make sure that there is no air leakage.**

1. Evaporator Temperature Sensor
    1. Install the evaporator temperature sensor (A) in the evaporator core (B), and note these items:
        - When the evaporator temperature sensor is installed into the new evaporator core, set the sensor into the factory-preset position (C, D).
        - When the evaporator temperature sensor is reinstalled into the original evaporator core, set the sensor into the new position (E, F) because the fin may be deforming by the previous installation.

Installing into the factory-presset position

Fig. 278: Identifying Evaporator Temperature Sensor In Evaporator Core Installation Position (30th Row)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Installing into the new position

Fig. 279: Identifying Evaporator Temperature Sensor In Evaporator Core Installation Position (29th Row)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the evaporator temperature sensor (A).

GETtheMANUALS.org

Fig. 280: Identifying Evaporator Temperature Sensor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Evaporator Core
    1. Install the plate (A).
    2. Carefully install the evaporator core (B) without bending the lines.

Fig. 281: Identifying Evaporator Core And Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Expansion Valve
    1. Install the expansion valve (A) with new O-rings (B) that are lubricated with clean refrigerant oil and the insulator (C).

GETtheMANUALS.org

Fig. 282: Installing Expansion Valve
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the bolts.

Fig. 283: Identifying Expansion Valve Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Expansion Valve Cover
    1. Install the expansion valve cover (A), and the new seal (B).
    2. Connect the power transistor connector (C).
    3. Install the connector clip (D).
    4. Connect the evaporator temperature sensor connector (E).

GETtheMANUALS.org

Fig. 284: Identifying Evaporator Temperature Sensor Connector, Power Transistor Connector, Expansion Valve Cover, Seal And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Passenger's Air Mix Control Motor (Climate Control)
    1. Align the passenger's air mix control motor (A) with the gear, then install the motor.
    2. Connect the passenger's air mix control motor connector (B).
    3. After installation, make sure the motor runs smoothly.

GETtheMANUALS.org

Fig. 285: Identifying Passenger Air Mix Control Motor And Gear Align Mark
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Heater Core Cover
    1. Install the heater core cover (A).

GETtheMANUALS.org

Fig. 286: Identifying Heater Core Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Blower Unit
    1. Install the blower unit (A).

GETtheMANUALS.org

Fig. 287: Identifying Blower Unit With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Connect the recirculation control motor connector (A).
3. Install the harness clips (B).

Fig. 288: Identifying Recirculation Control Motor Connectors And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Connect the blower motor connector (A).
5. Install the harness clip (B).

Fig. 289: Identifying Blower Motor Connector And Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Passenger's Heater Duct

GETtheMANUALS.org

1. Install the passenger's heater duct (A).

Fig. 290: Identifying Passenger Heater Duct
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Glove Box Frame
    1. Install the glove box frame (A).

Fig. 291: Identifying Glove Box Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. A/C Line - Evaporator Side
    1. Install the stud bolt (A).

GETtheMANUALS.org

Fig. 292: Identifying A/C Line Stud Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Connect the A/C line (A) with new O-rings (B) that are lubricated with clean refrigerant oil.

Fig. 293: Identifying A/C Line And O-Rings With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the bolt.

GETtheMANUALS.org

Fig. 294: Identifying A/C Line Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. R-134a Refrigerant Recovery/Recycling/Charging Station - Connection
    1. Connect an R-134a refrigerant recovery/recycling/charging station (A) to the high-pressure service port (B) and the low-pressure service port (C), as shown, following the equipment manufacturer's instructions.

Fig. 295: Identifying Refrigerant Recovery/Recycling/Charging Station, High And Low

GETtheMANUALS.org

<u>Pressure Service Port</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. A/C System Evacuation
    1. Evacuate the system. The vacuum pump should run for a minimum of 30 minutes to eliminate all moisture from the system. When the suction gauge reads -93.3 kPa (-700 mmHg, - 27.55 inHg) for at least 30 minutes, close all valves, and turn off the vacuum pump.
    2. If the suction gauge dose not reach approximately -93.3 kPa (-700 mmHg, -27.55 inHg) in 15 minutes, there is probably a large leak in the system. Partially charge the system, and check for leaks.
13. A/C Refrigerant - Charging
    1. Charge the system with the specified amount of R-134a refrigerant. Do not overcharge the system; the A/C compressor will be damaged.

       Select the appropriate units of measure for your refrigerant charging station.

       Refrigerant Capacity:

       385 to 435 g

       13.6 to 15.4 oz

       0.385 to 0.435 kg

       0.849 to 0.959 lbs

14. A/C Refrigerant - Leak Check

Leak Detector Usage Tips (Refer to the Operator's Manual for complete operating instructions)

- Position the vehicle in a wind-free work area. This will aid in detecting small leaks.
- When using the leak detector for the first time, allow it to warm up for 2 minutes with the probe in a clean atmosphere. This lets the temperature sensor in the detector stabilize.
- The calibration check should be done in the "Search 2" mode. Once that is done, the other check modes do not need calibrating.
- When leak checking through the HVAC module drain hose, avoid drawing water into the probe. Water can damage the internal pump and sensor.
- Avoid creasing the flexible probe extension. Creases can restrict air flow and give false readings.
- Because the detector recalibrates itself for ambient gases, it may be necessary to move the detector away from the leak to clear the sensor. Once the sensor has cleared, recheck the suspected leak.
- When removing the clear probe tip, be careful not to lose the flow ball.
- R-134a is heavier than air; always check below and to the sides of all potential leak sources.
- Halogen leak detectors are sensitive to chemicals: windshield washing solutions, solvents/cleaners, and some vehicle adhesives. Keep these chemicals out of the area when doing leak detection.

GETtheMANUALS.org

Fluorescent Dye Usage Tips

- Use only Tracer-Stick single dose fluorescent dye capsules from Tracerline®. Other dyes contain solvents that may contaminate the refrigerant oil, leading to component failure.
- Adding excessive amounts of dye can damage the A/C compressor.
- PAG oil is water soluble, so condensation on the evaporator core or the refrigerant lines may wash the PAG oil and fluorescent dye away from the actual leak. Condensation may also carry dye through the HVAC module drain.
- After checking and repairing leaks, thoroughly clean any residual dye from the areas where leaks were found. Use GLO-AWAY dye cleaner, from Tracerline®, and hot water to remove the dye (follow the instructions on the bottle). Residual dye stains can cause misdiagnosis of any future A/C system leaks.
- If any refrigerant dye contacts an exterior paint surface, remove it by doing this:
  - Carefully wash the affected surfaces to remove any dirt, and to prevent paint scratching.
  - Mix water and isopropyl alcohol in a 50/50 mixture. Soak a soft 100 % cotton towel with the water/alcohol mixture, and place the cloth on the affected areas to remove the dye.
  - After removing the dye with the water/alcohol-soaked cloth, carefully wash the affected areas, and check that there is no remaining dye.

1. With the engine OFF, use a halogen leak detector first to detect the leak source. Follow a continuous path in order to ensure that you will not miss any possible leaks. Test the following areas of the system for leaks:

Possible Leak Area	Diagnostic Procedure with the Leak Detector	Notes
Service ports	• Check the service ports with caps installed • If the detector "sniffs" a leak, use fluorescent dye to confirm it	When capping the service ports, ensure that the seals on the port caps are in place, and that the caps are tight. The caps are used as the final seals in the system
A/C condenser	If the detector "sniffs" a leak, use fluorescent dye to confirm it	• Check for joints or connections coated with oily dust • Check for damaged and corroded areas • Check all fittings, couplings, brazed/welded areas and areas around attachment points • Move the probe slowly (1 in/second or less), and keep it within 1/4 in of the component being checked. This maximizes the chance of detecting a leak • If you detect a leak, blow compressed air over the area, then recheck for leaks. For large leaks, clearing the area with compressed air may help you pinpoint the leak source
	• Check at the evaporator	

GETtheMANUALS.org

Evaporator	drain hose • Check at the passenger's side vent and turn the blower on at low speed	
A/C lines	• Wiggle the rubber hoses when checking crimped metal ends • If the detector "sniffs" a leak, use fluorescent dye to confirm it	• Check all fittings, couplings, pressure switches, brazed/welded areas, and areas around attachment points on A/C lines and components • Check for damaged and corroded areas • Move the probe slowly (1 in/second or less), and keep it within 1/4 in of the component being checked. This maximizes the chance of detecting a leak

2. Close the quick coupler valves, then disconnect the quick couplers from the vehicle service ports.
3. Attach the universal connect set, from the Optimax Jr. Leak Detection Kit, to the service valve fitting. Close the control valve (the black knob on the connect set).
4. Attach the charging station low pressure hose quick coupler to the service valve fitting, and open the quick coupler valve. Evacuate the connect set using the charging station vacuum pump, then close the quick coupler valve.
5. Detach the universal connect set, and install a Tracer-Stick® dye capsule between the connect set and the service valve fitting (see the manufacturer's instructions for more detail).
6. Attach the quick coupler on the universal connect set to the low pressure service port on the vehicle. Open the charging station low pressure hose quick coupler valve, but do not open the control valve.
7. Start the engine, and set the A/C system to maximum cooling. Open the control valve to let refrigerant and the dye enter the A/C system through the low pressure service port. Close the control valve when the Tracer-Stick® dye capsule is empty.
8. Run the engine and A/C system for 15 minutes to thoroughly circulate the dye. Then shut the engine off, and inspect the following areas of the system for leaks:

NOTE:

- **Check for leaks in a dark work area, and use the UV light and the special glasses from the leak check kit. Other UV lights may not work well with the Tracer-Stick® dye.**
- **Small leaks may take up to 1 week of vehicle operation (with normal A/C use) to become visible.**

Possible Leak Area	Diagnostic Procedure with Fluorescent Dye
Service ports	If a leak is found, replace the cap/o-ring seal or A/C line as needed
A/C lines	• Use a permanent marker pen to circle the leak area • If a leak is found, remove and replace the A/C line

GETtheMANUALS.org

A/C condenser	• If a leak is found, remove the A/C condenser • Determine whether leak is in the A/C condenser or the receiver/dryer • Use a permanent marker pen to circle the leak area • Replace either the receiver/dryer, or the A/C condenser, depending upon which is leaking
A/C compressor	• Check for leaks at all of the A/C compressor joints, the clutch center, the A/C compressor front housing bolts, and the scroll bolts on the back of the A/C compressor • If a leak is found, use a permanent marker pen to circle the leak area • If the A/C compressor relief valve appears to be leaking, determine whether the leak is coming from the relief valve, or the joint between the A/C compressor casing and the valve. If the leak is from the relief valve, check the A/C system pressures, and refer to the pressure test table in the A/C system test. If the leak is from the casing/valve joint, replace the A/C compressor relief valve • If the leak is coming from the suction hose and/or discharge hose fittings on the A/C compressor, clean the A/C fittings and replace the suction/discharge fitting O-rings • For all other A/C compressor leaks, remove and replace the A/C compressor
Evaporator	• Start checking for evaporator leaks by illuminating the evaporator drain tube area • If a leak is found, remove the evaporator core • Determine whether leak is from evaporator or expansion valve • Use a permanent marker pen to circle leak area • Replace the expansion valve, or the evaporator core, depending upon which is leaking

15. A/C System - Test
    1. Insert a thermometer (A) in the center vent.
    2. Place a hygro-thermometer (B) near the blower unit's recirculation inlet duct.
    3. Test conditions:
        - Move the vehicle out of direct sunlight and let it cool down to the surrounding (ambient) temperature. If necessary, wash the vehicle to cool it down more quickly.
        - The blower intake temperature must be at least 68°F (20°C).
        - Open the hood.
        - Open the front doors.
        - Start the engine.
        - Set the temperature control dial or temperature control button to MAX COOL, the mode control button to VENT, and the recirculation control button to RECIRCULATE.
        - Turn the A/C button on and the fan control dial or fan control button to Max.

GETtheMANUALS.org

- Run the engine at 1, 500 rpm.
- No driver or passengers in vehicle.

Fig. 296: Checking Delivery Temperature From Thermometer In Center Vent
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Inspect the A/C components for the following conditions:
   - A/C compressor clutch not engaged.
   - Abnormal frost areas.
   - Unusual noises.

   If you observe any of these conditions, refer to the Symptom Troubleshooting Index.

5. After running the air conditioning for 10 minutes under the above test conditions, read the delivery temperature from the thermometer in the center vent, the intake temperature near the blower unit, and the discharge (high) and suction (low) pressures on the A/C gauges.
6. To complete the vent (delivery)/intake temperature chart:
   - Mark the vent (delivery) temperature on the vertical line.
   - Mark the intake temperature on the bottom line.
   - Draw a vertical line from the intake temperature mark.
   - Draw a horizontal line from the vent (delivery) temperature mark until it intersects the vertical line.

   NOTE: The vent temperature and intake temperature should intersect in the shaded area. Any measurements outside the line may

GETtheMANUALS.org

indicate the need for further inspection.

Fig. 297: Intake Temperature Versus Vent (Delivery) Temperature Graph
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. To complete the high side (discharge) pressure/intake temperature chart:
   - Mark the high side (discharge) pressure on the vertical line.
   - Mark the intake temperature on the bottom line.
   - Draw a vertical line from the intake temperature mark.
   - Draw a horizontal line from the high side (discharge) pressure mark until it intersects the vertical line.

NOTE: **The high side pressure and intake temperature should intersect in the shaded area. Any measurements outside the line may indicate the need for further inspection.**

GETtheMANUALS.org

Fig. 298: Intake Temperature Versus High Side (Discharge) Pressure Graph
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. To complete the low side (suction) pressure/intake temperature chart:
   - Mark the low side (suction) pressure along the vertical line.
   - Mark the intake temperature along the bottom line.
   - Draw a vertical line from the intake temperature mark.
   - Draw a horizontal line from the low side (suction) pressure mark until it intersects the vertical line.

NOTE: **The low side pressure and intake temperature should intersect in the shaded area. Any measurements outside the line may indicate the need for further inspection.**

REMOVAL

CAUTION:

- **Air conditioning refrigerant or lubricant vapor can irritate your eyes, nose, or throat.**
- **Be careful when connecting service equipment.**
- **Do not breathe refrigerant or vapor.**

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** and the **PRECAUTIONS AND PROCEDURES** before doing repair or servicing.

NOTE:

- **If accidental system discharge occurs, ventilate the work area before resuming service.**
- **Additional health and safety information may be obtained from the refrigerant and lubricant manufacturers.**

1. Vehicle Lift

GETtheMANUALS.org

1. Raise the vehicle on a lift, and make sure it is securely supported.

2. Battery Terminal (SRS) - Disconnection
    1. Make sure the ignition switch is in LOCK (0).
    2. Disconnect and isolate the negative cable (A) from the battery.

    NOTE: Always disconnect the negative side first.

    3. Disconnect the positive cable (B) from the battery.
    4. Wait at least 3 minutes before starting work.

Fig. 304: Identifying Battery Positive And Negative Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. R-134a Refrigerant Recovery/Recycling/Charging Station - Connection
    1. Connect an R-134a refrigerant recovery/recycling/charging station (A) to the high-pressure service port (B) and the low-pressure service port (C), as shown, following the equipment manufacturer's instructions.

GETtheMANUALS.org

Fig. 305: Identifying Refrigerant Recovery/Recycling/Charging Station, High And Low Pressure Service Port
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. A/C Refrigerant - Recovery
    1. Recover the refrigerant from the A/C system.
    2. Measure the amount of refrigerant oil removed from the A/C system after the recovery process is completed. Be sure to put the same amount of new refrigerant oil back into the A/C system before charging.
5. A/C Line - Evaporator Side
    1. Remove the bolt.

Fig. 306: Identifying A/C Line Mounting Bolt

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Disconnect the A/C line (A) with O-rings (B).

Fig. 307: Identifying A/C Line And O-Rings
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the stud bolt (A).

Fig. 308: Identifying A/C Line Stud Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Radiator Cap
    1. Wait until the engine is cool, then carefully remove the radiator cap.
7. Radiator Coolant - Replacement
    1. Loosen the drain plug (A), and drain the coolant.
    2. After the coolant has drained, tighten the drain plug securely.

GETtheMANUALS.org

Fig. 309: Loosening Radiator Coolant Drain Plug
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Heater Hose - Body Side

NOTE:

- **Engine coolant will run out when the hoses are disconnected; drain it into a clean drip pan. Be sure not to let coolant spill on the electrical parts or the painted surfaces. If any coolant spills, rinse it off immediately.**
- **Note the layout of the hose.**

1. Disconnect the inlet heater hose (A).
2. Disconnect the outlet heater hose (B).

Fig. 310: Identifying Inlet And Outlet Heater Hose
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the nut.

NOTE: **Take care not to damage or bend the fuel lines or brake lines, etc.**

GETtheMANUALS.org

Fig. 311: Identifying Heater Hose Nut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Front Door Opening Seal As Needed - Both Sides

NOTE: Repeat on the opposite side.

1. Pull out the front door opening seal (A) from the trim hooks (B) around the front door opening flange, then detach the seal as needed.

Fig. 312: Removing Front Door Opening Seal From Trim Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. A-Pillar Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Pull out the A-pillar trim (A) by hand to release the clips (B, C).

GETtheMANUALS.org

Fig. 313: Removing A-Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Put a shop towel (A) in the opening between the A-pillar trim (B) and the dashboard to prevent dropping the A-pillar clips.

Fig. 314: Placing Shop Towel In Opening Between A-Pillar Trim And Dashboard
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Pull out and up on the A-pillar trim (A) to release it from the dashboard.

NOTE: The upper clip will stay in the body.

GETtheMANUALS.org

Fig. 315: Removing A-Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the upper clip (A) from the body.

Fig. 316: Removing A-Pillar Trim Upper Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Driver's Dashboard Undercover
    1. Turn the lock knob (A) 90 °, then gently pull down the front edge of the driver's dashboard undercover (B) to detach the clip (C).
    2. Pull away the undercover to release the pin (D) from the holder (E), then remove the driver's dashboard undercover.

GETtheMANUALS.org

Fig. 317: Identifying Driver Dashboard Undercover, Holder, Lock Knob, Pin And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Passenger's Dashboard Undercover
    1. Gently pull down the passenger's dashboard undercover (A) to detach the clips (B), then pull away the undercover to release the pins (C) from the holder (D).

Fig. 318: Identifying Passenger Dashboard Undercover, Holder, Pins And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Driver's Dashboard Panel Assembly

GETtheMANUALS.org

1. Carefully pry out the driver's dashboard panel assembly (A) with the appropriate trim tool to detach the clips (B).
2. Disconnect the connector (C), then remove the driver's dashboard panel assembly.

Fig. 319: Identifying Driver Dashboard Panel Assembly, Connector And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Driver's Dashboard Lower Cover
    1. Carefully pry out the driver's dashboard lower cover (A) with the appropriate trim tool to detach the clips (B).
    2. Disconnect the connector (C), then remove the driver's dashboard lower cover.

GETtheMANUALS.org

Fig. 320: Identifying Driver Dashboard Lower Cover, Connector And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Kick Panel - Both Sides
    1. Pull out the front door opening seal (A) as needed from the kick panel hooks and the door opening flange.
    2. Pull back the kick panel by hand to detach the clips (B), then remove the driver's side kick panel (C) and the passenger's side kick panel (D).

    Driver's side

Fig. 321: Removing Front Door Opening Seal (Driver Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Passenger's side

GETtheMANUALS.org

Fig. 322: Removing Front Door Opening Seal (Passenger Side)

Right side

Fig. 325: Identifying Front Console Cover And Clips (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Center Console Rear Trim
    1. Carefully pry out the center console rear trim (A) with the appropriate trim tool to detach the clips (B) and the hooks (C), then remove the center console rear trim.

Fig. 326: Identifying Center Console Rear Trim, Hooks And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Center Console
    1. Carefully pry out the center lower cover (A) with the appropriate trim tool to detach the clips (B),

GETtheMANUALS.org

then remove the center lower cover.

2. Remove the bolt (C).

Fig. 327: Identifying Center Lower Cover, Clips And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the bolts (A).

Fig. 328: Identifying Center Console Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the console box mat (A), then remove the bolts (B).

GETtheMANUALS.org

Fig. 329: Identifying Console Box Mat And Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Disconnect the connectors (A), and remove the clips (B).

Fig. 330: Identifying Center Console Connector And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Slide both front seats fully rearward, and recline the seat-backs around two thirds to the rear.
7. Remove the center console (A).

GETtheMANUALS.org

Fig. 331: Removing Center Console
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Driver's Airbag
    1. Remove the access panel (A).
    2. Disconnect the driver's airbag inflator connector (B) on the cable reel harness.
    3. Disconnect the horn switch connector (C).

Fig. 332: Identifying Driver Airbag Inflator Connector, Horn Switch Connector And Access Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    4. Remove the TORX bolts using a TORX T30 bit.
    5. Remove the driver's airbag (A).

GETtheMANUALS.org

Fig. 333: Identifying Driver Airbag
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Steering Wheel Assembly
    1. Set the front wheels in the straight ahead position.
    2. Disconnect the connector (A).
    3. Loosen the steering wheel bolt (B) three turns.

Fig. 334: Identifying Steering Wheel Connector And Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    4. Install a commercially available steering wheel puller (A) on the steering wheel (B).
    5. Free the steering wheel from the steering column shaft by turning the pressure bolt (C) of the puller.

    Note these items when removing the steering wheel:

    - Do not tap on the steering wheel or the steering column shaft when removing the steering wheel.

GETtheMANUALS.org

- If you thread the puller bolts (D) into the wheel hub more than five threads, the bolts will hit the cable reel and damage it. To prevent this, install a pair of jam nuts five threads up on each puller bolt.

Fig. 335: Removing Steering Wheel From Steering Column Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the steering wheel puller.
7. Remove the steering wheel (A) from the steering column.

Fig. 336: Identifying Steering Wheel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Upper Column Cover
    1. Carefully pry out the dashboard meter visor blind cover (A) with the appropriate trim tool to detach the clips (B) and the hook (C), then tuck up the dashboard meter visor blind cover.

GETtheMANUALS.org

Fig. 337: Identifying Dashboard Meter Visor Blind Cover, Clips And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the upper column cover (A).

Fig. 338: Identifying Upper Column Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. Lower Column Cover
    1. Remove the screws (A) securing the lower column cover (B) from the front side.

GETtheMANUALS.org

Fig. 339: Identifying Lower Column Cover And Screws (Front Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the screw (A), then remove the lower column cover (B).

Fig. 340: Identifying Lower Column Cover And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

24. Combination Switch Body Assembly
    1. Disconnect the connectors (A).
    2. Remove the clip (B).

GETtheMANUALS.org

Fig. 341: Identifying Combination Switch Connector And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Disconnect the connectors (A).

Fig. 342: Identifying Combination Switch Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the combination switch body assembly (A) from the steering column shaft.

GETtheMANUALS.org

Fig. 343: Identifying Combination Switch Body Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

25. Steering Joint Cover
    1. Remove the steering joint cover (A).

Fig. 344: Identifying Steering Joint Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

26. Steering Column Lower Slide Shaft - Hold
    1. Set the steering column to the center tilt position, and to the center telescopic position.
    2. Hold the lower slide shaft (A) on the column with a piece of wire (B) between the joint yoke (C) of the lower slide shaft and the joint yoke (D) of the upper shaft to prevent the lower slider shaft from pulling out.

GETtheMANUALS.org

Fig. 345: Identifying Lower Slide Shaft, Yoke And Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

27. Steering Joint - Disconnection
    1. Remove the steering joint bolt (A).
    2. Disconnect the steering joint (B) from the pinion shaft.

NOTE:

- **If the center guide (C) is in place and has not moved, leave it in place.**
- **If the center guide has come off, discard it.**

Fig. 346: Identifying Steering Joint, Center Guide And Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

28. Steering Column
    1. Disconnect the connectors (A) from the ignition switch (B).

GETtheMANUALS.org

Fig. 347: Identifying Steering Column, Ignition Switch, Connector And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Detach the wire harness clips (C) from the steering column.
3. Remove the steering column (D).

NOTE: **Do not release the lock lever until the steering column is installed. If the lock lever is released before installation, adjust the steering column after installation.**

29. Center Maintenance Cover
    1. Remove the maintenance cover (A).

GETtheMANUALS.org

Fig. 348: Identifying Maintenance Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

30. Shift Lever Panel (AT)
    1. Carefully pry out the shift lever panel (A) with the appropriate trim tool to detach the clips (B, C) and the hooks (D), then remove the shift lever panel.

Fig. 349: Identifying Shift Lever Panel, Hooks And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

31. Shift Cable - Disconnection Lever Side
    1. Shift the shift lever to R.
    2. Insert a 6.0 mm (0.236 in) pin (A) into the positioning holes (B).

NOTE: Use only a 6.0 mm (0.236 in) pin with no burrs.

GETtheMANUALS.org

3. Remove the nut (C) securing the shift cable end (D).

Fig. 350: Shifting Lever To R Position
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Unlock the retainer lock (A).

Fig. 351: Unlocking Retainer Lock
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rotate the socket holder retainer (A) counterclockwise (B) until it stops, and push the retainer lock (C) into the socket holder retainer to lock the retainer.

GETtheMANUALS.org

Fig. 352: Rotating Socket Holder Retainer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Slide the socket holder (A) away from the bracket as shown to remove the shift cable (B) from the shift cable bracket (C).

NOTE: Do not remove the shift cable by pulling the shift cable guide (D).

Fig. 353: Sliding Socket Holder Away From Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

32. Dashboard/Steering Hanger Beam
    1. At the A-pillar, disconnect the connector(s) (A).

       Driver's side

GETtheMANUALS.org

Fig. 354: Identifying Dashboard/Steering Hanger Beam Connector (Driver Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Passenger's side

Fig. 355: Identifying Dashboard/Steering Hanger Beam Connectors (Passenger Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. From under the dash, disconnect the connectors (A).

GETtheMANUALS.org

Fig. 356: Identifying Dashboard/Steering Hanger Beam Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. From under the dash, remove the nut (A) and the bolt (B).

Fig. 357: Identifying Dashboard/Steering Hanger Beam Nut And Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. With climate control: Disconnect the aspirator hose (A).
5. Disconnect the connector (B).

GETtheMANUALS.org

Fig. 358: Identifying Aspirator Hose And Connector (With Climate Control)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. From under the dash, disconnect the connectors (A).
7. Remove the bolts (B, C), and remove the ground bolt (D) with a TORX T30 bit.

Fig. 359: Identifying Dashboard/Steering Hanger Beam Connector, Bolt And Ground Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. From under the dash, disconnect the connectors (A), and detach the harness clips (B).

GETtheMANUALS.org

Fig. 360: Identifying Dashboard/Steering Hanger Beam Connectors And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Loosen the special bolts (A) until they disengage from the threads on the hanger beam side bracket (B), and engage the inside threads of the collar bolts (C). The thread lock on the special bolts makes the special bolts and the collar bolts turn together.
10. Continue loosening the special bolts to turn the collar bolts into the fixed space adjusters (D) until the collar bolts engage the stops (E). This creates a gap (F) between the collar bolts and the body.
11. Loosen the special bolts to disengage them from the collar bolts, then remove them.

GETtheMANUALS.org

Fig. 361: Loosening Dashboard/Steering Hanger Beam Special Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Check that the collar bolts (A) are seated in the fixed space adjusters (B).

NOTE: **If either collar bolt was not seated, replace the special bolts.**

GETtheMANUALS.org

Fig. 362: Identifying Dashboard/Steering Hanger Beam Collar Bolts And Space Adjuster
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Remove the bolts (A, B).

Fig. 363: Identifying Dashboard/Steering Hanger Beam Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Remove the dashboard/steering hanger beam (A).

GETtheMANUALS.org

Fig. 364: Removing Dashboard/Steering Hanger Beam
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. If necessary, detach the hooks (A), then remove the dashboard upper side cover (B).

Fig. 365: Identifying Dashboard Upper Side Cover And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

33. Blower-Heater Unit
    1. Disconnect the engine compartment wire harness connector (A).

GETtheMANUALS.org

Fig. 366: Identifying Engine Compartment Wire Harness Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Disconnect the drain hose (A).
3. Remove the blower-heater unit (B).

Fig. 367: Identifying Blower-Heater Unit And Drain Hose
Courtesy of AMERICAN HONDA MOTOR CO., INC.

34. Passenger's Heater Duct
    1. Remove the passenger's heater duct (A).

GETtheMANUALS.org

Fig. 368: Identifying Passenger Heater Duct
Courtesy of AMERICAN HONDA MOTOR CO., INC.

35. A/C Wire Harness
    1. Disconnect the blower motor connector (A).
    2. Detach the harness clip (B).
    3. Disconnect the power transistor connector (C).
    4. With climate control: Disconnect the passenger's air mix control motor connector (D).

Fig. 369: Identifying Evaporator Temperature Sensor Connector, Power Transistor Connector, Expansion Valve Cover, Seal And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

5. Disconnect the mode control motor connector (A).
6. Disconnect the recirculation control motor connector (B).
7. Disconnect the evaporator temperature sensor connector (C).
8. Detach the harness clips (D).

Fig. 370: Identifying Mode Control, Recirculation Control, Evaporator Temperature Sensor Motor Connector And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Disconnect the air mix control motor connector (A).
10. Detach the harness clips (B).

Fig. 371: Identifying Air Mix Control Motor And Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

36. Blower Unit
    1. Remove the blower unit (A).

GETtheMANUALS.org

Fig. 372: Identifying Blower Unit
Courtesy of AMERICAN HONDA MOTOR CO., INC.

37. Heater Core Cover
    1. Remove the heater core cover (A).

Fig. 373: Identifying Heater Core Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

38. Passenger's Air Mix Control Motor (Climate Control)
    1. Remove the passenger's air mix control motor (A).

GETtheMANUALS.org

Fig. 374: Identifying Passenger Air Mix Control Motor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

39. Expansion Valve Cover
    1. Detach the connector clip (A).
    2. Remove the expansion valve cover (B) and the seal (C).

Fig. 375: Identifying Expansion Valve Cover, Seal And Connector Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

40. Evaporator Core
    1. Carefully pull out the evaporator core (A) without bending the lines.
    2. Remove the plate (B).

GETtheMANUALS.org

Fig. 376: Identifying Evaporator Core And Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

41. Expansion Valve Bracket
    1. Remove the expansion valve bracket (A).

Fig. 377: Identifying Expansion Valve Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

42. Heater Core
    1. Remove the grommet (A).
    2. Remove the heater pipe bracket (B).
    3. Carefully pull out the heater core (C) without bending the lines.

GETtheMANUALS.org

Fig. 378: Identifying Heater Core, Bracket And Grommet

INSTALLATION

CAUTION:

- **Air conditioning refrigerant or lubricant vapor can irritate your eyes, nose, or throat.**
- **Be careful when connecting service equipment.**
- **Do not breathe refrigerant or vapor.**
- **Do not operate the leak detector near flammable vapors. Its sensor operates at high temperatures, and could ignite the vapors, resulting in personal injury and/or damage to the equipment.**

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** and the **PRECAUTIONS AND PROCEDURES** before doing repair or servicing.

NOTE:

- **If an accidental system discharge occurs, ventilate the work area before resuming service.**
- **Additional health and safety information may be obtained from the refrigerant and lubricant manufacturers.**
- **Check the system for leaks using an R-134a refrigerant leak detector with an accuracy of 14 g (0.5 oz) per year or better.**
- **Replace the O-rings with new ones at each fitting, and apply a thin coat of refrigerant oil before installing them. Be sure to use the correct O-rings for HFC-134a (R-134a) to avoid leakage.**
- **Use only PAG refrigerant oil for HFC-134a A/C systems.**
- **To avoid contamination, do not return the oil to the container once dispensed, and never mix it with other refrigerant oils.**

GETtheMANUALS.org

- **Immediately after using the oil, reinstall the cap on the container, and seal it to avoid moisture absorption.**
- **Do not spill the refrigerant oil on the vehicle; it may damage the paint; if the refrigerant oil contacts the paint, wash it off immediately.**
- **Do not interchange the inlet and outlet heater hoses, and install the hose clamps securely.**
- **Make sure that there is no coolant leakage.**
- **Make sure that there is no air leakage.**

1. Heater Core
    1. Carefully install the heater core (A) without bending the lines.
    2. Install the heater pipe bracket (B).
    3. Install the grommet (C).

Fig. 379: Identifying Heater Core, Bracket And Grommet
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Expansion Valve Bracket
    1. Install the expansion valve bracket (A).

GETtheMANUALS.org

Fig. 380: Identifying Expansion Valve Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Evaporator Core
    1. Install the plate (A).
    2. Carefully install the evaporator core (B) without bending the lines.

Fig. 381: Identifying Evaporator Core And Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Expansion Valve Cover
    1. Install the new seal (A) and the expansion valve cover (B).
    2. Install the connector clip (C).

GETtheMANUALS.org

Fig. 382: Identifying Expansion Valve Cover, Seal And Connector Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Passenger's Air Mix Control Motor (Climate Control)
    1. Align the passenger's air mix control motor (A) with the gear, then install the motor.
    2. After installation, make sure the motor runs smoothly.

GETtheMANUALS.org

Fig. 383: Identifying Passenger Air Mix Control Motor And Gear Align Marks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Heater Core Cover
    1. Install the heater core cover (A).

Fig. 384: Identifying Heater Core Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Blower Unit
    1. Install the blower unit (A).

Fig. 385: Identifying Blower Unit With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. A/C Wire Harness
    1. Connect the air mix control motor connector (A).
    2. Install the harness clips (B).

GETtheMANUALS.org

Fig. 386: Identifying Air Mix Control Motor Connector And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Connect the evaporator temperature sensor connector (A).
4. Connect the recirculation control motor connector (B).
5. Connect the mode control motor connector (C).
6. Install the harness clips (D).

Fig. 387: Identifying Mode Control, Recirculation Control, Evaporator Temperature Sensor Motor Connector And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. With climate control: Connect the passenger's air mix control motor connector (A).
8. Connect the power transistor connector (B).
9. Connect the blower motor connector (C).
10. Install the harness clip (D).

GETtheMANUALS.org

Fig. 388: Identifying Passenger Air Mix Control Motor Connector, Power Transistor Connector, Blower Motor Connector And Clips

9. Passenger's Heater Duct
    1. Install the passenger's heater duct (A).

Fig. 389: Identifying Passenger Heater Duct
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Blower-Heater Unit
    1. Install the blower-heater unit (A).
    2. Connect the drain hose (B).

GETtheMANUALS.org

Fig. 390: Identifying Blower-Heater Unit And Drain Hose With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Connect the engine compartment wire harness connector (A).

Fig. 391: Identifying Engine Compartment Wire Harness Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Dashboard/Steering Hanger Beam

GETtheMANUALS.org

Fig. 392: Tightening Dashboard/Steering Hanger Beam Special Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Make sure the collar bolts (A) turn easily by hand in the fixed space adjusters (B). Tighten the collar bolts by hand until they engage the fixed space adjusters before reinstalling the dashboard.**
- **Before reinstalling the dashboard, screw the special bolts (C) into the collar bolts, and check that they turn together. If they do not turn together, replace the special bolts.**
- **After setting the dashboard/steering hanger beam in the body, install all of the mounting bolts but do not tighten them. First tighten the driver's side bracket bolts to the specified torque. Next, tighten the special bolts to turn the collar bolts. As you tighten the bolts, the collar bolts screw out of the fixed space adjuster until they contact the body. Continue tightening the special bolts to the specified torque.**

1. Install the dashboard upper side cover (A). Make sure the hooks (B) snap into place securely.

GETtheMANUALS.org

Fig. 393: Identifying Dashboard Upper Side Cover And Clips

12. Steering Column
    1. Install the steering column (A).

NOTE: **Do not release the lock lever until the steering column is installed. If the lock lever is released before installation, adjust the steering column after installation.**

Fig. 404: Identifying Steering Column, Ignition Switch, Connector And Clips With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

2. Loosely tighten the attaching nuts and bolts.
3. Tighten the attaching nuts and bolts to the specified torque in the sequence shown.
4. Install the wire harness clips (B) to the steering column.
5. Connect the connectors (C) to the ignition switch (D).

13. Steering Column Lower Slide Shaft - Release
    1. Cut the wire (A).

Fig. 405: Identifying Steering Column Lower Slide Shaft Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Steering Joint - Reconnection
    1. Place the rack in the straight ahead driving position.
    2. Slip the lower end of the steering joint (A) onto the pinion shaft (B).

NOTE:

- **Pinion shaft with center guide: Install the steering joint by aligning the center guide (C).**
- **Pinion shaft without center guide: Position the steering column by aligning the gap (D) within the angle.**

Fig. 406: Identifying Steering Joint, Center Guide And Align Gap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

3. Align the bolt hole (A) on the steering joint with the groove (B) around the pinion shaft.
4. Loosely install the steering joint bolt (C).
5. Be sure that the joint bolt is securely in the groove in the pinion shaft.
6. Pull on the steering joint to make sure that the steering joint is fully seated.
7. Tighten the steering joint bolt to the specified torque.

Fig. 407: Identifying Steering Joint Groove, Bolt And Hole With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Steering Joint Cover
    1. Install the steering joint cover (A).

Fig. 408: Identifying Steering Joint Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Combination Switch Body Assembly
    1. Install the combination switch body assembly (A).
    2. Tighten three screws (B) in the sequence shown.

GETtheMANUALS.org

Fig. 409: Identifying Combination Switch Body Assembly And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Connect the connectors (A).

Fig. 410: Identifying Combination Switch Body Assembly Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Connect the connectors (A).
5. Install the clip (B).

GETtheMANUALS.org

Fig. 411: Identifying Combination Switch Connectors And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Lower Column Cover
    1. Push in on the lower column cover just above ignition switch opening (A) to engage the column cover with the locking tab (B).

Fig. 412: Engaging Column Cover With Locking Tab
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Install the lower column cover (A), then install the screw (B).

GETtheMANUALS.org

Fig. 413: Identifying Lower Column Cover And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the screws (A) securing the lower column cover (B) from the front side.

Fig. 414: Identifying Lower Column Cover And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Upper Column Cover
    1. Install the upper column cover (A).

GETtheMANUALS.org

Fig. 415: Identifying Upper Column Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the dashboard meter visor blind cover (A). Make sure the clips (B) and the hook (C) snap into place securely.

Fig. 416: Identifying Dashboard Meter Visor Blind Cover, Hooks And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Steering Wheel Assembly
    1. Make sure the front wheels are pointing straight ahead.
    2. Center the cable reel (A). Do this by first rotating the cable reel clockwise until it stops.
    3. Rotate the cable reel counterclockwise about three full turns. The arrow mark (B) on the cable reel label should point straight up.

GETtheMANUALS.org

Fig. 417: Identifying Cable Reel And Label Mark
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Position the steering wheel hub (A) so that it engages the pin (B) of the cable reel.
5. Install the steering wheel (C) on to the steering column shaft.

NOTE: **Do not tap on the steering wheel or the steering column shaft when installing the steering wheel.**

Fig. 418: Identifying Steering Wheel, Hub And Cable Reel Pin
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the steering wheel bolt (A), and tighten it to the specified torque.
7. Connect the connector (B).
8. Make sure the wire harness is routed and fastened properly.

GETtheMANUALS.org

Fig. 419: Identifying Steering Wheel Connector And Bolt With Torque Specifications

20. Driver's Airbag

NOTE: **If you are replacing a deployed driver's airbag, inspect the cable reel for heat damage. If there is any damage, replace the cable reel.**

1. Place the driver's airbag (A) in the steering wheel.
2. Tighten the new TORX bolts using a TORX T30 bit.

NOTE: **Make sure the clearance (B) between the steering wheel and the horn pad is the specified value.**

Fig. 420: Identifying Driver Airbag With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

Fig. 421: Identifying Clearance Between Steering Wheel And Horn Pad
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Connect the driver's airbag inflator connector (A) on the cable reel harness.
4. Connect the horn switch connector (B).

NOTE: **After reconnecting the negative cable to the battery, make sure the horn works properly.**

5. Install the access panel (C).

Fig. 422: Identifying Driver Airbag Inflator Connector, Horn Switch Connector And Access Panel

26. A-Pillar Trim - Check
    1. If the side curtain airbag has deployed, replace the A-pillar trim (A), along with the other parts listed for side curtain airbag deployment.
    2. If the side curtain airbag has not deployed, check the A-pillar trim and note the following items:
        - To prevent the side curtain airbags from deploying improperly and possibly causing injury, inspect the A-pillar trim and replace it with a new one if it has any of the following damage:
            - Any cracks, deformations, or stress-whitened areas in the A-pillar trim
            - Any cracks or stress-whitening in the clip seating surfaces (B)
        - After checking and adjusting the overlap between the headliner and the A-pillar trim, replace the upper clip (C) with a new one.
        - If the clips (D) are damaged or stress-whitened, replace them with new ones.

GETtheMANUALS.org

Fig. 429: Installing Upper Clip To A-Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

27. Headliner/Pillar Trim Overlap - Check

Checking and Adjusting the Headliner/Pillar Trim Overlap

To prevent the side curtain airbag from deploying and damaging the pillar trim (A-pillar trim, B-pillar trim, quarter pillar trim), the overlap between the headliner and pillar trim must be 8.0+0/-2.0 mm (0.31+0/-0.08 in). To check the overlap, do this:

1. Install the headliner (A) and the pillar trim (B).

Fig. 430: Identifying Headliner And Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

This illustration shows the A-pillar.

2. Apply masking tape (A) to the headliner (B) to mark the upper edge of the pillar trim (C).

GETtheMANUALS.org

Fig. 431: Applying Masking Tape To Headliner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

This illustration shows the A-pillar.

3. Remove the pillar trim, and measure the headliner overlap.
   - If the overlap is 8.0+0/-2.0 mm (0.31+0/-0.08 in), remove the tape, and install the pillar trim.
   - If the overlap is more than 8.0 mm (0.31 in), go to step 4.

Fig. 432: Measuring Headliner Overlap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

This illustration shows the A-pillar.

4. Carefully trim the headliner with a utility knife, reducing the overlap to 8.0+0/-2.0 mm (0.31+0/-0.08 in).
5. Remove the tape, and install the pillar trim.

GETtheMANUALS.org

Fig. 433: Timing Headliner Using Utility Knife
Courtesy of AMERICAN HONDA MOTOR CO., INC.

This illustration shows the A-pillar.

28. A-Pillar Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Carefully install a new upper clip (A) to the A-pillar trim (B).

Fig. 434: Installing Upper Clip To A-Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Insert the bottom portion of the A-pillar trim (A) into the dashboard (B). Place the trim over the A-pillar (C), and fit its upper clip (D) and the other clips (E) into the holes (F) in the A-pillar, then lightly push the trim into place.

NOTE:

- **Make sure the side curtain airbag is not tucked under the clips**

GETtheMANUALS.org

or the trim ribs.

- **Do not push too hard on the A-pillar trim. If you push too hard, the clip will be damaged, and it will not hold the trim properly.**
- **Gently tug on the A-pillar trim to verify that all clips are securely fastened.**

Fig. 435: Inserting Bottom Portion Of A-Pillar Trim Into Dashboard
Courtesy of AMERICAN HONDA MOTOR CO., INC.

29. Front Door Opening Seal As Needed - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Install the front door opening seal (A). Make sure the seal is installed securely into the hooks (B).

Fig. 436: Installing Front Door Opening Seal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

30. Shift Cable - Adjustment
    1. Push the shift cable (A) until it stops, then release it. Pull the shift cable back one step so that the shift position is in R.

NOTE: Do not hold the shift cable guide (B) to adjust the shift cable.

Fig. 437: Identifying Shift Lever Position
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Turn the ignition switch to ON (II).
    3. Check that the R position indicator comes on.
    4. Turn the ignition switch to LOCK (0).

Fig. 438: Identifying R Position Indicator
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    5. Unlock the retainer lock (A).

GETtheMANUALS.org

Fig. 439: Unlocking Retainer Lock
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Rotate the socket holder retainer (A) in arrow direction (B) until it stops to create clearance (C) between the socket holder (D) and holder retainer, and push the retainer lock (E) into the socket holder retainer to lock the retainer.

Fig. 440: Rotating Socket Holder Retainer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Align the shift cable slot (A) between the socket holder (B) and the socket holder retainer (C) with the opening (D) in the shift cable bracket (E), then slide the holder into the bracket while installing the shift cable end (F) over the mounting stud (G) by aligning its square hole (H) with the square fitting (I) at the bottom of the stud.

NOTE:

- **Do not install the shift cable by holding the shift cable guide (J).**

GETtheMANUALS.org

- **When the socket holder is installed in the shift cable bracket, the retainer lock is unhinged and releases the holder retainer lock, then the holder retainer returns under spring force to secure the shift cable.**

Fig. 441: Installing Socket Holder In Shift Cable Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Push the retainer lock (A) fully to lock the socket holder retainer (B), and make sure that the retainer lock fits into the hinged-joint (C). If the retainer lock does not fit with the edge of the hinged-joint, rotate the holder retainer counterclockwise while pushing the retainer lock until it locks.

Fig. 442: Locking Socket Holder Retainer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

9. Make sure that the shift cable end (A) is properly installed on the mounting stud (B).
    - If the shift cable end is out of position with the mounting stud, remove the shift cable from the shift cable bracket, then reinstall the cable end over the mounting stud before reinstalling the shift cable to the shift cable bracket. Do not install the shift cable end on the mounting stud with the shift cable install on the shift cable bracket.
    - If the shift cable end does not ride at the bottom of the mounting stud, rotate the stud to align the square fitting with the hole.

Fig. 443: Identifying Shift Cable End And Mounting Stud Installation Position (Proper/Improper)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Install the shift cable end nut (A).
11. Remove the 6.0 mm (0.236 in) pin (B) that was installed to hold the shift lever.
12. Turn the ignition switch to ON (II).
13. Move the shift lever to each position, and check that the A/T gear position indicator follows the transmission range switch.
14. Shift the shift lever to P.
15. Check that the shift lock works properly.
16. Push the shift lock release, and check that the shift lever releases. Also check that the shift lever locks when it is shifted back to P.

GETtheMANUALS.org

Fig. 444: Identifying Shift Cable End Nut And Pin With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

31. Shift Lever Panel (AT)
    1. Install the shift lever panel (A). Make sure the clips (B, C) and the hooks (D) snap into place securely.

Fig. 445: Identifying Shift Lever Panel, Hooks And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

32. Center Maintenance Cover
    1. Install the maintenance cover (A).

GETtheMANUALS.org

Fig. 446: Identifying Maintenance Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

33. Center Console
    1. Install the center console (A).

Fig. 447: Installing Center Console
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Connect the connectors (A), and install the clips (B).

GETtheMANUALS.org

Fig. 448: Identifying Center Console Connectors And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the bolts (A), then install the console box mat (B).

Fig. 449: Identifying Console Box Mat And Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the bolts (A).

GETtheMANUALS.org

Fig. 450: Identifying Center Console Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the bolt (A), then install the center lower cover (B). Make sure the clips (C) snap into place securely.

Fig. 451: Identifying Center Lower Cover, Bolt And Clips With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

34. Center Console Rear Trim
    1. Install the center console rear trim (A). Make sure the clips (B) and the hooks (C) snap into place securely.

GETtheMANUALS.org

Fig. 452: Identifying Center Console Rear Trim, Clips And Hooks With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

35. Front Console Cover - Both Sides
    1. Install the front console covers (A). Make sure the clips (B, C) snap into place securely.

       Left side

Fig. 453: Identifying Front Console Cover And Clips (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

GETtheMANUALS.org

Fig. 454: Identifying Front Console Cover And Clips (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

36. Heater Hose - Body Side
    1. Install the nut.

NOTE: **Take care not to damage or bend the fuel lines or brake lines, etc.**

Fig. 455: Identifying Heater Hose Nut With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Connect the inlet heater hose (A).
    3. Connect the outlet heater hose (B).

GETtheMANUALS.org

Fig. 456: Identifying Inlet And Outlet Heater Hose
Courtesy of AMERICAN HONDA MOTOR CO., INC.

37. A/C Line - Evaporator Side
    1. Install the stud bolt (A).

Fig. 457: Identifying A/C Line Stud Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Connect the A/C line (A) with new O-rings (B) that are lubricated with clean refrigerant oil.

GETtheMANUALS.org

Fig. 458: Identifying A/C Line And O-Rings With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the bolt.

Fig. 459: Identifying A/C Line Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

38. Battery Terminal (SRS) - Reconnection

NOTE: If the battery performance is abnormal, test the battery.

1. Clean the battery terminals.
2. Connect the positive cable (A) to the battery.

NOTE: Always connect the positive side first.

GETtheMANUALS.org

3. Connect the negative cable (B) to the battery.
4. Apply multipurpose grease to the terminals to prevent corrosion.

Fig. 460: Identifying Battery Positive And Negative Cable With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

39. Radiator Coolant - Replacement
    1. Follow the chart and pour coolant into the radiator up to the base of the filler neck.

NOTE:

- **Always use Honda Long Life Antifreeze/Coolant Type 2 or Honda Extreme Cold Weather Antifreeze/Coolant Type 2. Using a non-Honda coolant can result in corrosion, causing the cooling system to malfunction or fail.**
- **Honda Long Life Antifreeze/Coolant Type 2 is a mixture of 50 % antifreeze and 50 % water. Honda Extreme Cold Weather Antifreeze/Coolant Type 2 is a 100% concentration coolant. Do not add water to either coolant.**
- **If the vehicle is regularly used in very low temperatures (under -22 °F (-30 °C)) a 60% concentration of coolant should be used.**

Operation	Vehicle Usage (Desired Mixture)	Current Mixture	Coolant Drain	Add Amount of Honda Extreme Cold Weather Antifreeze/Coolant Type 2 (100% concentrate)	Then add Honda Long Life Antifreeze/Coolant Type 2 (50/50)
Coolant Change	Normal Area (50/50)	50/50 60/40 unknown	Drain radiator and reservoir	None	
	Very Cold Area (60/40)	50/50 unknown		About 1.5 L (51 fl oz)	
		60/40		About 1.3L (44 fl oz)	

GETtheMANUALS.org

Engine Overhaul	Normal Area (50/50)	-	-	None	Top off the cooling system
	Very Cold Area (60/40)	-	-	About 1.5 L (51 fl oz)	
Coolant Winterizing	Very Cold Area (60/40)	50/50	Drain about 2.0 L (68 fl oz) from radiator	About 1.5 L (51 fl oz)	
		unknown (1)	Drain radiator and reservoir		
(1) When you want to winterize the coolant with the minimum amount of coolant change but the current coolant concentration in the vehicle is unknown, you must drain all coolant from the cooling system.					

Engine Coolant Capacities (Including the coolant reservoir capacity of 0.62 L (0.164 US gal))	
At Coolant Change:	6.23 L (1.646 US gal)
After Engine Overhaul:	7.44 L (1.966 US gal)

Fig. 461: Adding Engine Coolant To Radiator
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Loosely install the radiator cap.
3. Start the engine and let it run until the radiator fan comes on at least twice. Do not operate the air conditioning system.
4. Turn off the engine. Check the level in the radiator and add Honda Long Life Antifreeze/Coolant Type 2 if needed.
5. Put the radiator cap securely, then start the engine again, and check for leaks.
6. Clean up any spilled engine coolant.
7. Fill the coolant reservoir to the MAX mark (A) with Honda Long Life Antifreeze/Coolant Type 2.

GETtheMANUALS.org

Fig. 462: Identifying Coolant Reservoir MAX Mark
Courtesy of AMERICAN HONDA MOTOR CO., INC.

40. R-134a Refrigerant Recovery/Recycling/Charging Station - Connection
    1. Connect an R-134a refrigerant recovery/recycling/charging station (A) to the high-pressure service port (B) and the low-pressure service port (C), as shown, following the equipment manufacturer's instructions.

Fig. 463: Identifying Refrigerant Recovery/Recycling/Charging Station, High And Low Pressure Service Port
Courtesy of AMERICAN HONDA MOTOR CO., INC.

41. A/C System Evacuation
    1. Evacuate the system. The vacuum pump should run for a minimum of 30 minutes to eliminate all

GETtheMANUALS.org

moisture from the system. When the suction gauge reads -93.3 kPa (-700 mmHg, - 27.55 inHg) for at least 30 minutes, close all valves, and turn off the vacuum pump.

2. If the suction gauge dose not reach approximately -93.3 kPa (-700 mmHg, -27.55 inHg) in 15 minutes, there is probably a large leak in the system. Partially charge the system, and check for leaks.

42. A/C Refrigerant - Charging
    1. Charge the system with the specified amount of R-134a refrigerant. Do not overcharge the system; the A/C compressor will be damaged.

       Select the appropriate units of measure for your refrigerant charging station.

       Refrigerant Capacity:

       385 to 435 g

       13.6 to 15.4 oz

       0.385 to 0.435 kg

       0.849 to 0.959 lbs

43. A/C Refrigerant - Leak Check

Leak Detector Usage Tips (Refer to the Operator's Manual for complete operating instructions)

- Position the vehicle in a wind-free work area. This will aid in detecting small leaks.
- When using the leak detector for the first time, allow it to warm up for 2 minutes with the probe in a clean atmosphere. This lets the temperature sensor in the detector stabilize.
- The calibration check should be done in the "Search 2" mode. Once that is done, the other check modes do not need calibrating.
- When leak checking through the HVAC module drain hose, avoid drawing water into the probe. Water can damage the internal pump and sensor.
- Avoid creasing the flexible probe extension. Creases can restrict air flow and give false readings.
- Because the detector recalibrates itself for ambient gases, it may be necessary to move the detector away from the leak to clear the sensor. Once the sensor has cleared, recheck the suspected leak.
- When removing the clear probe tip, be careful not to lose the flow ball.
- R-134a is heavier than air; always check below and to the sides of all potential leak sources.
- Halogen leak detectors are sensitive to chemicals: windshield washing solutions, solvents/cleaners, and some vehicle adhesives. Keep these chemicals out of the area when doing leak detection.

Fluorescent Dye Usage Tips

- Use only Tracer-Stick single dose fluorescent dye capsules from Tracerline®. Other dyes contain solvents that may contaminate the refrigerant oil, leading to component failure.

GETtheMANUALS.org

- Adding excessive amounts of dye can damage the A/C compressor.
- PAG oil is water soluble, so condensation on the evaporator core or the refrigerant lines may wash the PAG oil and fluorescent dye away from the actual leak. Condensation may also carry dye through the HVAC module drain.
- After checking and repairing leaks, thoroughly clean any residual dye from the areas where leaks were found. Use GLO-AWAY dye cleaner, from Tracerline®, and hot water to remove the dye (follow the instructions on the bottle). Residual dye stains can cause misdiagnosis of any future A/C system leaks.
- If any refrigerant dye contacts an exterior paint surface, remove it by doing this:
  - Carefully wash the affected surfaces to remove any dirt, and to prevent paint scratching.
  - Mix water and isopropyl alcohol in a 50/50 mixture. Soak a soft 100 % cotton towel with the water/alcohol mixture, and place the cloth on the affected areas to remove the dye.
  - After removing the dye with the water/alcohol-soaked cloth, carefully wash the affected areas, and check that there is no remaining dye.

1. With the engine OFF, use a halogen leak detector first to detect the leak source. Follow a continuous path in order to ensure that you will not miss any possible leaks. Test the following areas of the system for leaks:

Possible Leak Area	Diagnostic Procedure with the Leak Detector	Notes
Service ports	• Check the service ports with caps installed • If the detector "sniffs" a leak, use fluorescent dye to confirm it	When capping the service ports, ensure that the seals on the port caps are in place, and that the caps are tight. The caps are used as the final seals in the system
A/C condenser	If the detector "sniffs" a leak, use fluorescent dye to confirm it	• Check for joints or connections coated with oily dust • Check for damaged and corroded areas • Check all fittings, couplings, brazed/welded areas and areas around attachment points • Move the probe slowly (1 in/second or less), and keep it within 1/4 in of the component being checked. This maximizes the chance of detecting a leak • If you detect a leak, blow compressed air over the area, then recheck for leaks. For large leaks, clearing the area with compressed air may help you pinpoint the leak source
Evaporator	• Check at the evaporator drain hose • Check at the passenger's side vent and turn the blower on	

GETtheMANUALS.org

	at low speed	
A/C lines	• Wiggle the rubber hoses when checking crimped metal ends • If the detector "sniffs" a leak, use fluorescent dye to confirm it	• Check all fittings, couplings, pressure switches, brazed/welded areas, and areas around attachment points on A/C lines and components • Check for damaged and corroded areas • Move the probe slowly (1 in/second or less), and keep it within 1/4 in of the component being checked. This maximizes the chance of detecting a leak

2. Close the quick coupler valves, then disconnect the quick couplers from the vehicle service ports.
3. Attach the universal connect set, from the Optimax Jr. Leak Detection Kit, to the service valve fitting. Close the control valve (the black knob on the connect set).
4. Attach the charging station low pressure hose quick coupler to the service valve fitting, and open the quick coupler valve. Evacuate the connect set using the charging station vacuum pump, then close the quick coupler valve.
5. Detach the universal connect set, and install a Tracer-Stick® dye capsule between the connect set and the service valve fitting (see the manufacturer's instructions for more detail).
6. Attach the quick coupler on the universal connect set to the low pressure service port on the vehicle. Open the charging station low pressure hose quick coupler valve, but do not open the control valve.
7. Start the engine, and set the A/C system to maximum cooling. Open the control valve to let refrigerant and the dye enter the A/C system through the low pressure service port. Close the control valve when the Tracer-Stick® dye capsule is empty.
8. Run the engine and A/C system for 15 minutes to thoroughly circulate the dye. Then shut the engine off, and inspect the following areas of the system for leaks:

NOTE:

- **Check for leaks in a dark work area, and use the UV light and the special glasses from the leak check kit. Other UV lights may not work well with the Tracer-Stick® dye.**
- **Small leaks may take up to 1 week of vehicle operation (with normal A/C use) to become visible.**

Possible Leak Area	Diagnostic Procedure with Fluorescent Dye
Service ports	If a leak is found, replace the cap/o-ring seal or A/C line as needed
A/C lines	• Use a permanent marker pen to circle the leak area • If a leak is found, remove and replace the A/C line
A/C condenser	• If a leak is found, remove the A/C condenser • Determine whether leak is in the A/C condenser or the receiver/dryer • Use a permanent marker pen to circle the leak area

GETtheMANUALS.org

	• Replace either the receiver/dryer, or the A/C condenser, depending upon which is leaking
A/C compressor	• Check for leaks at all of the A/C compressor joints, the clutch center, the A/C compressor front housing bolts, and the scroll bolts on the back of the A/C compressor • If a leak is found, use a permanent marker pen to circle the leak area • If the A/C compressor relief valve appears to be leaking, determine whether the leak is coming from the relief valve, or the joint between the A/C compressor casing and the valve. If the leak is from the relief valve, check the A/C system pressures, and refer to the pressure test table in the A/C system test. If the leak is from the casing/valve joint, replace the A/C compressor relief valve • If the leak is coming from the suction hose and/or discharge hose fittings on the A/C compressor, clean the A/C fittings and replace the suction/discharge fitting O-rings • For all other A/C compressor leaks, remove and replace the A/C compressor
Evaporator	• Start checking for evaporator leaks by illuminating the evaporator drain tube area • If a leak is found, remove the evaporator core • Determine whether leak is from evaporator or expansion valve • Use a permanent marker pen to circle leak area • Replace the expansion valve, or the evaporator core, depending upon which is leaking

44. Steering After Install - Check
    1. After installation, check these items:
        - Start the engine, allow it to idle, and turn the steering wheel from lock to lock several times.
        - Check that the EPS indicator does not come on.
        - Check the steering wheel spoke angle. If steering spoke angles to the right and left are not equal (steering wheel and rack are not centered), correct the engagement of the joint/pinion shaft splines.
45. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

GETtheMANUALS.org

Fig. 464: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

46. DTC - Clear
    1. Clear the DTC(s) by following the screen prompts on the HDS.
    2. Turn the ignition switch to LOCK (0), then wait for 10 seconds.
47. Confirm Proper SRS Operation
    1. Turn the ignition switch to ON (II), and check that the SRS indicator comes on for about 6 seconds and then goes off.
48. A/C System - Test
    1. Insert a thermometer (A) in the center vent.
    2. Place a hygro-thermometer (B) near the blower unit's recirculation inlet duct.
    3. Test conditions:
        - Move the vehicle out of direct sunlight and let it cool down to the surrounding (ambient) temperature. If necessary, wash the vehicle to cool it down more quickly.
        - The blower intake temperature must be at least 68°F (20°C).
        - Open the hood.
        - Open the front doors.
        - Start the engine.
        - Set the temperature control dial or temperature control button to MAX COOL, the mode control button to VENT, and the recirculation control button to RECIRCULATE.
        - Turn the A/C button on and the fan control dial or fan control button to Max.
        - Run the engine at 1, 500 rpm.
        - No driver or passengers in vehicle.

GETtheMANUALS.org

Fig. 465: Checking Delivery Temperature From Thermometer In Center Vent
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Inspect the A/C components for the following conditions:
   - A/C compressor clutch not engaged.
   - Abnormal frost areas.
   - Unusual noises.

   If you observe any of these conditions, refer to the Symptom Troubleshooting Index.

5. After running the air conditioning for 10 minutes under the above test conditions, read the delivery temperature from the thermometer in the center vent, the intake temperature near the blower unit, and the discharge (high) and suction (low) pressures on the A/C gauges.
6. To complete the vent (delivery)/intake temperature chart:
   - Mark the vent (delivery) temperature on the vertical line.
   - Mark the intake temperature on the bottom line.
   - Draw a vertical line from the intake temperature mark.
   - Draw a horizontal line from the vent (delivery) temperature mark until it intersects the vertical line.

   NOTE: **The vent temperature and intake temperature should intersect in the shaded area. Any measurements outside the line may indicate the need for further inspection.**

GETtheMANUALS.org

Fig. 466: Intake Temperature Versus Vent (Delivery) Temperature Graph
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. To complete the high side (discharge) pressure/intake temperature chart:
   - Mark the high side (discharge) pressure on the vertical line.
   - Mark the intake temperature on the bottom line.
   - Draw a vertical line from the intake temperature mark.
   - Draw a horizontal line from the high side (discharge) pressure mark until it intersects the vertical line.

NOTE: **The high side pressure and intake temperature should intersect in the shaded area. Any measurements outside the line may indicate the need for further inspection.**

GETtheMANUALS.org

Fig. 467: Intake Temperature Versus High Side (Discharge) Pressure Graph
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. To complete the low side (suction) pressure/intake temperature chart:
   - Mark the low side (suction) pressure along the vertical line.
   - Mark the intake temperature along the bottom line.
   - Draw a vertical line from the intake temperature mark.
   - Draw a horizontal line from the low side (suction) pressure mark until it intersects the vertical line.

NOTE: **The low side pressure and intake temperature should intersect in the shaded area. Any measurements outside the line may indicate the need for further inspection.**

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

49. Glove Box - Move
    1. Install the glove box (A). Make sure the glove box stops (B) snap into place securely.
    2. Install the glove box damper hook (C).

GETtheMANUALS.org

Fig. 469: Installing Glove Box Damper Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

50. VSA Sensor Neutral Position - Memorization
    1. Park the vehicle on a flat and level surface, with the steering wheel in the straight ahead position.
    2. Select VSA ADJUSTMENT, then select ALL SENSORS with the HDS, and follow the screen prompts.

    NOTE: See the HDS Help menu for specific instructions.

51. Steering Angle Sensor Neutral Position - Clear
    1. Select EPS ADJUSTMENT, then select EPS STEERING ANGLE SENSOR VALUE CLEAR and follow the screen prompts on the HDS.

    NOTE: See the HDS Help menu for specific instructions.

52. Maintenance Minder Reset
    1. **RESET THE MAINTENANCE MINDER** .

HUMIDITY/IN-CAR TEMPERATURE SENSOR REMOVAL AND INSTALLATION

REMOVAL

1. Center Maintenance Cover
    1. Remove the maintenance cover (A).

GETtheMANUALS.org

Fig. 470: Identifying Maintenance Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Shift Lever Panel (AT)
    1. Carefully pry out the shift lever panel (A) with the appropriate trim tool to detach the clips (B, C) and the hooks (D), then remove the shift lever panel.

Fig. 471: Identifying Shift Lever Panel, Hooks And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. TPMS Control Unit - Move

GETtheMANUALS.org

1. Press the tab (A), and remove the TPMS control unit (B) with connector connected.

Fig. 472: Removing TPMS Control Unit
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Humidity/In-Car Temperature Sensor
    1. Push out the humidity/in-car temperature sensor (A) by press the tab (B) from back.
    2. Disconnect the aspirator hose (C) and the connector (D).

Fig. 473: Removing Humidity/In-Car Temperature Sensor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Humidity/In-Car Temperature Sensor
    1. Connect the aspirator hose (A) and the connector (B).
    2. Install the humidity/in-car temperature sensor (C).

GETtheMANUALS.org

Fig. 474: Identifying Humidity/In-Car Temperature Sensor, Connector And Aspirator Hose
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. TPMS Control Unit - Move
    1. Install the TPMS control unit (A) with connector connected.

Fig. 475: Installing TPMS Control Unit
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Shift Lever Panel (AT)
    1. Install the shift lever panel (A). Make sure the clips (B, C) and the hooks (D) snap into place securely.

GETtheMANUALS.org

Fig. 476: Identifying Shift Lever Panel, Hooks And Clips

HVAC CONTROL UNIT REMOVAL AND INSTALLATION

GETtheMANUALS.org

REMOVAL

1. Shift Lever Panel (AT)
    1. Carefully pry out the shift lever panel (A) with the appropriate trim tool to detach the clips (B, C) and the hooks (D), then remove the shift lever panel.

Fig. 478: Identifying Shift Lever Panel, Hooks And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Driver's Inner Dashboard Trim Panel
    1. Carefully pry out the driver's inner dashboard trim panel (A) with the appropriate trim tool to detach the clips (B), then remove the driver's inner dashboard trim panel.

GETtheMANUALS.org

Fig. 479: Identifying Driver Inner Dashboard Trim Panel And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. HVAC Control Unit Assembly
    1. Remove the HVAC control unit assembly (A), then disconnect the connector (B).

Fig. 480: Identifying HVAC Control Unit Assembly And Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. HVAC Control Unit
    1. Remove the dials (A).
    2. Remove the HVAC control unit (B).

GETtheMANUALS.org

Fig. 481: Identifying HVAC Control Unit And Dials
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. HVAC Control Unit
    1. Install the HVAC control unit (A).
    2. Install the dials (B).

GETtheMANUALS.org

Fig. 482: Identifying HVAC Control Unit And Dials
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. HVAC Control Unit Assembly
    1. Connect the connector (A), then install the HVAC control unit assembly (B).

Fig. 483: Identifying HVAC Control Unit Assembly And Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Driver's Inner Dashboard Trim Panel
    1. Install the driver's inner dashboard trim panel (A). Make sure the clips (B) snap into place securely.

GETtheMANUALS.org

Fig. 484: Identifying Driver Inner Dashboard Trim Panel And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Shift Lever Panel (AT)
    1. Install the shift lever panel (A). Make sure the clips (B, C) and the hooks (D) snap into place securely.

Fig. 485: Identifying Shift Lever Panel, Hooks And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. HVAC Self-Diagnostic Function

GETtheMANUALS.org

How to Use the Self-Diagnostic Function to Check for DTCs

1. Turn the ignition switch to LOCK (0) and then back to ON (II).
2. Set the FAN CONTROL dial to OFF, the TEMPERATURE CONTROL dial to Max Cool, and select the VENT mode.
3. Press and hold the RECIRCULATION button, then within 10 seconds press and release the REAR WINDOW DEFOGGER button five times. Release the RECIRCULATION button.
4. The RECIRCULATION indicator blinks two times, then the self-diagnostic function begins.

NOTE:

- **The self-diagnostic test could take up to about 90 seconds to run.**
- **The blower motor will run at various speeds when in the self-diagnostic mode.**
- **If there is any problem in the system after the self-diagnostic function is finished, the recirculation indicator blinks Diagnostic Trouble Code (DTC) number 1 through 13. In the case of multiple problems, the recirculation indicator blinks in sequence from the lowest DTC number to the highest.**
- **If no DTCs are found, the indicator will not blink.**

Fig. 486: Identifying Rear Window Defogger Button, Recirculation Indicator And Button
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Example of DTC Indication Pattern (DTC 3)

GETtheMANUALS.org

Fig. 487: Example Of DTC Indication Pattern (DTC 3)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Example of DTCs Indication Pattern (DTC 2 and 4)

Fig. 488: Example Of DTC Indication Pattern (DTC 2 And 4)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DTC (Recirculation Indicator Blinks)	Detection Item
1	An open in the air mix control motor circuit
2	A short in the air mix control motor circuit
3	A problem in the air mix control motor circuit, linkage, door, or motor
4	An open in the mode control motor circuit
5	A short in the mode control motor circuit
6	A problem in the mode control motor circuit, linage, doors, or, motor
7	An open in the recirculation control motor
8	A short in the recirculation control motor
9	A problem in the recirculation control motor circuit, linkage, door, or, motor
10	A problem in the blower motor circuit
11	HVAC control unit internal error
12	An open in the evaporator temperature sensor circuit
13	A short in the evaporator temperature sensor circuit

GETtheMANUALS.org

Canceling the Self-Diagnostic Function

5. Turn the ignition switch to LOCK (0) to cancel the self-diagnostic function. After completing the repair work, run the self-diagnostic function again to make sure that there are no other DTCs.

MODE CONTROL MOTOR REMOVAL AND INSTALLATION

REMOVAL

NOTE: Set the VENT position before removing the motor.

1. Glove Box - Move
    1. Detach the glove box damper hook (A), and release both glove box stops (B) by pushing them in, then let glove box (C) hang down.

Fig. 489: Detaching Glove Box Damper Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Mode Control Motor
    1. Disconnect the mode control motor connector (A).
    2. Remove the mode control motor (B).

GETtheMANUALS.org

Fig. 490: Identifying Mode Control Motor And Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Mode Control Motor
    1. Install the mode control motor (A).
    2. Connect the mode control motor connector (B).
    3. After installation, make sure the motor runs smoothly.

Fig. 491: Identifying Mode Control Motor And Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Glove Box - Move
    1. Install the glove box (A). Make sure the glove box stops (B) snap into place securely.
    2. Install the glove box damper hook (C).

GETtheMANUALS.org

Fig. 492: Installing Glove Box Damper Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

OUTSIDE AIR TEMPERATURE SENSOR REMOVAL, INSTALLATION, AND TEST

REMOVAL

1. Outside Air Temperature Sensor
    1. Disconnect the outside air temperature sensor connector (A).
    2. Lift the tab (B) to release the lock, and remove the outside air temperature sensor (C).

Fig. 493: Identifying Outside Air Temperature Sensor, Connector And Tab
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

TEST

NOTE: Before testing the sensor, check for climate control DTCs.

1. Outside Air Temperature Sensor - Test
    1. Dip the sensor in ice water, and measure the resistance. Then pour warm water on the sensor, and check for a change in resistance.
    2. Compare the resistance reading between terminals No. 1 and No. 2 of the outside air temperature sensor with the specifications shown in the graph; the resistance should be within the specifications.
    3. If the resistance is not as specified, replace the outside air temperature sensor.

Fig. 494: Outside Air Temperature Sensor Resistance Graph
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Outside Air Temperature Sensor
    1. Install the outside air temperature sensor (A).
    2. Connect the outside air temperature sensor connector (B).

GETtheMANUALS.org

PASSENGER'S AIR MIX CONTROL MOTOR REMOVAL AND INSTALLATION

REMOVAL

NOTE: Set the MAX COOL position before removing the motor.

1. Passenger's Dashboard Undercover
    1. Gently pull down the passenger's dashboard undercover (A) to detach the clips (B), then pull away the undercover to release the pins (C) from the holder (D).

GETtheMANUALS.org

Fig. 496: Identifying Passenger Dashboard Undercover, Holder, Pins And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Glove Box
    1. Remove the bolts (A).

Fig. 497: Identifying Glove Box Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Release both glove box stops (A) by pushing them in, then let the glove box (B) hang down.

Fig. 498: Releasing Glove Box Stops
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

3. Detach the glove box damper hook (A), then remove the glove box (B).

Fig. 499: Removing Glove Box
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Glove Box Frame
    1. Remove the glove box frame (A).

Fig. 500: Identifying Glove Box Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Passenger's Heater Duct
    1. Remove the passenger's heater duct (A).

GETtheMANUALS.org

Fig. 501: Identifying Passenger Heater Duct
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Heater Core Cover
    1. Remove the heater core cover (A).

Fig. 502: Identifying Heater Core Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Passenger's Air Mix Control Motor
    1. Disconnect the passenger's air mix control motor connector (A).
    2. Remove the Passenger's air mix control motor (B).

GETtheMANUALS.org

Fig. 503: Identifying Passenger Air Mix Control Motor And Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Passenger's Air Mix Control Motor
    1. Align the passenger's air mix control motor (A) with the gear, then install the motor.
    2. Connect the passenger's air mix control motor connector (B).
    3. After installation, make sure the motor runs smoothly.

GETtheMANUALS.org

	Throttle Pedal Depressor Tool B240B, commercially available
(1) These tools are available through the Honda Tool and Equipment Program; call 888-424-6857	

REMOVAL

CAUTION:

- **Air conditioning refrigerant or lubricant vapor can irritate your eyes, nose, or throat.**
- **Be careful when connecting service equipment.**
- **Do not breathe refrigerant or vapor.**

NOTE:

- **If accidental system discharge occurs, ventilate the work area before resuming service.**
- **Additional health and safety information may be obtained from the refrigerant and lubricant manufacturers.**
- **Install the desiccant as quickly as possible to prevent the system from absorbing moisture from the air.**

1. Glove Box - Move
    1. Detach the glove box damper hook (A), and release both glove box stops (B) by pushing them in,

GETtheMANUALS.org

then let glove box (C) hang down.

Fig. 532: Detaching Glove Box Damper Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. R-134a Refrigerant Recovery/Recycling/Charging Station - Connection
    1. Connect an R-134a refrigerant recovery/recycling/charging station (A) to the high-pressure service port (B) and the low-pressure service port (C), as shown, following the equipment manufacturer's instructions.

GETtheMANUALS.org

Fig. 533: Identifying Refrigerant Recovery/Recycling/Charging Station, High And Low Pressure Service Port
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. A/C Refrigerant - Recovery
    1. Recover the refrigerant from the A/C system.
    2. Measure the amount of refrigerant oil removed from the A/C system after the recovery process is completed. Be sure to put the same amount of new refrigerant oil back into the A/C system before charging.
4. Front Grille
    1. Apply protective tape (A) to the front grille lower trim (B).

GETtheMANUALS.org

Fig. 534: Applying Protective Tape To Front Grille Lower Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the clips (C) and detach the hooks (D).
3. Insert a shop towel (A) between the front grille (B) and the front grille lower trim (C).

GETtheMANUALS.org

Fig. 535: Inserting Shop Towel Between Front Grille And Front Grille Lower Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Insert a flat-tip screwdriver (A) into the opening at the front grille (B), then turn the screwdriver to detach the clip (C).

NOTE: Repeat this procedure on the opposite side.

Fig. 536: Inserting Flat-Tip Screwdriver Into Opening At Front Grille
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the front grille (A).

GETtheMANUALS.org

Fig. 537: Removing Front Grille
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Front Wheel Arch Protector Front Side As Needed - Both Sides

NOTE: Repeat on the opposite side.

1. Remove the screws (A) and the clips (B) securing the front wheel arch protector (C).
2. Carefully pry out the clip portions of the wheel arch protector with the appropriate trim tool to detach the clips (D, E), then detach the wheel arch protector front side as needed.
3. Put a shop towel (F) in the opening between the front wheel arch protector and the front fender.

INSTALLATION

CAUTION:

- **Air conditioning refrigerant or lubricant vapor can irritate your eyes, nose, or throat.**
- **Be careful when connecting service equipment.**
- **Do not breathe refrigerant or vapor.**
- **Do not operate the leak detector near flammable vapors. Its sensor operates at high temperatures, and could ignite the vapors, resulting in personal injury and/or damage to the equipment.**

NOTE:

- **If an accidental system discharge occurs, ventilate the work area before resuming service.**
- **Additional health and safety information may be obtained from the refrigerant and lubricant manufacturers.**
- **Check the system for leaks using an R-134a refrigerant leak detector with an accuracy of 14 g (0.5 oz) per year or better.**
- **If you're installing a new desiccant, add refrigerant oil.**
- **Replace the O-rings with new ones at each fitting, and apply a thin coat of refrigerant oil before installing them. Be sure to use the correct O-rings for HFC-134a (R-134a) to avoid leakage.**
- **Use only PAG refrigerant oil for HFC-134a A/C systems.**
- **To avoid contamination, do not return the oil to the container once dispensed, and never mix it with other refrigerant oils.**
- **Immediately after using the oil, dispose of any remaining oil in the container, due to moisture absorption and short shelf life.**

GETtheMANUALS.org

- **Do not spill the refrigerant oil on the vehicle; it may damage the paint; if the refrigerant oil contacts the paint, wash it off immediately.**
- **Be careful not to damage the radiator and the A/C condenser fins when installing the A/C condenser.**

1. A/C Refrigerant Oil - Replacement

   Recommended PAG oil: SP-10

   P/N 38897-P13-A01AH: 120 mL (4 fl oz)

   It is important to have the correct amount of refrigerant oil in the A/C system to ensure proper lubrication of the A/C compressor. Too little oil damages the A/C compressor; too much oil reduces the cooling capacity of the system, and can produce high vent temperatures.

   - To avoid contamination, do not return the oil to the container once dispensed, and never mix it with other refrigerant oils.
   - Immediately after using the oil, reinstall the cap on the container, and seal it to avoid moisture absorption.
   - Do not spill the refrigerant oil on the vehicle; it may damage the paint; if it gets on the paint, wash it off immediately.

   Add the recommended refrigerant oil in the amount listed if you replace any of the following parts.

   A/C condenser

(including dryer desiccant).....	25 mL (5/6 fl oz)
Evaporator.....	40 mL (1 1/3 fl oz)
Line or hose.....	10 mL (1/3 fl oz)
Dryer desiccant.....	10 mL (1/3 fl oz)
Leakage repair.....	25 mL (5/6 fl oz)
A/C compressor.....	Since the oil separator is equipped inside the A/C compressor for this vehicle, oil drainage is unnecessary at the time of A/C compressor replacement.

2. Receiver/Dryer Desiccant
   1. Install the desiccant (A).
   2. Install the cap (B) with a new O-ring (C) that is lubricated with clean refrigerant oil.

GETtheMANUALS.org

Fig. 554: Identifying Receiver/Dryer Desiccant, Cap And O-Ring With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. A/C Condenser Assembly
    1. Install the A/C condenser (A).

NOTE: **Be careful not to damage the radiator and A/C condenser fins when installing the A/C condenser.**

GETtheMANUALS.org

Fig. 555: Identifying A/C Condenser
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Radiator Mounting Bracket, Upper Both
    1. Install the radiator mount upper brackets.

Fig. 556: Identifying Radiator Mount Upper Brackets With Torque Specifications

GETtheMANUALS.org

6. Hood Latch

NOTE: Apply multipurpose grease to the hood latch as indicated by the arrows.

Fig. 559: Identifying Hood Latch Grease Applying Area
Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. Connect the connector (A).
2. Connect the hood opener cable (B).
3. Install the hood latch (C), then install the bolts (D).

GETtheMANUALS.org

Fig. 560: Installing Hood Latch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Horn and Bracket Assembly
    1. Install the horn (A) and the bracket (B) as an assembly.
    2. Connect the connector.

Fig. 561: Identifying Horn And Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Front Grille Bracket
    1. Install the front grille bracket (A). Make sure the clips (B) snap into place securely.

GETtheMANUALS.org

Fig. 562: Identifying Front Grille Bracket And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Front Bumper Upper Duct
    1. Install the front bumper upper duct (A). Make sure the clips (B) snap into place securely.

Fig. 563: Identifying Front Bumper Upper Duct And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Front Bumper
    1. With the help of an assistant, connect the connectors (A), then install the front bumper (B).

GETtheMANUALS.org

Fig. 564: Identifying Front Bumper And Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. With the help of an assistant, install both sides of the front bumper (A) to the upper beam (B).

Fig. 565: Installing Front Bumper To Upper Beam
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Push the front bumper (A) until the clip (B) snaps into place. Repeat this step on the opposite side.

GETtheMANUALS.org

Fig. 566: Pushing Front Bumper
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the front bumper (A) to the side spacer (B). Repeat this step on the opposite side.

Fig. 567: Installing Front Bumper To Side Spacer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the screws (A), the bolts (B), and the clips (C) securing the front bumper (D).

GETtheMANUALS.org

Fig. 568: Identifying Front Bumper, Bolts, Screws And Clips With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Front Wheel Arch Protector Front Side As Needed - Both Sides
    1. Install the front wheel arch protector (A), then install the screws (B) and the clips (C). Make sure the clips (D, E) snap into place securely. Repeat this step on the opposite side.

GETtheMANUALS.org

Fig. 569: Identifying Front Wheel Arch Protector, Clips And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Front Grille
    1. Install the front grille (A) by pushing on the clip areas until the clips snap into place.
    2. Install the clips (B).

GETtheMANUALS.org

Fig. 570: Installing Front Grille
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Hood Latch - Adjustment
    1. Slightly loosen the hood latch mounting bolts (A).

Fig. 571: Adjusting Hood Latch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Adjust the hood latch (B) to obtain the proper height at the forward edge, and move the hood latch right or left until the striker (C) is centered in the hood latch.
    3. Tighten the hood latch mounting bolts to the specified torque.
    4. Make sure the hood opens properly and locks securely.
    5. Apply multipurpose grease to the hood latch as indicated by the arrows.

GETtheMANUALS.org

Fig. 572: Identifying Hood Latch Grease Applying Area
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. R-134a Refrigerant Recovery/Recycling/Charging Station - Connection
    1. Connect an R-134a refrigerant recovery/recycling/charging station (A) to the high-pressure service port (B) and the low-pressure service port (C), as shown, following the equipment manufacturer's instructions.

Fig. 573: Identifying Refrigerant Recovery/Recycling/Charging Station, High And Low

GETtheMANUALS.org

<u>Pressure Service Port</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. A/C System Evacuation
    1. Evacuate the system. The vacuum pump should run for a minimum of 30 minutes to eliminate all moisture from the system. When the suction gauge reads -93.3 kPa (-700 mmHg, - 27.55 inHg) for at least 30 minutes, close all valves, and turn off the vacuum pump.
    2. If the suction gauge dose not reach approximately -93.3 kPa (-700 mmHg, -27.55 inHg) in 15 minutes, there is probably a large leak in the system. Partially charge the system, and check for leaks.
16. A/C Refrigerant - Charging
    1. Charge the system with the specified amount of R-134a refrigerant. Do not overcharge the system; the A/C compressor will be damaged.

       Select the appropriate units of measure for your refrigerant charging station.

       Refrigerant Capacity:

       385 to 435 g

       13.6 to 15.4 oz

       0.385 to 0.435 kg

       0.849 to 0.959 lbs

17. A/C Refrigerant - Leak Check

Leak Detector Usage Tips (Refer to the Operator's Manual for complete operating instructions)

- Position the vehicle in a wind-free work area. This will aid in detecting small leaks.
- When using the leak detector for the first time, allow it to warm up for 2 minutes with the probe in a clean atmosphere. This lets the temperature sensor in the detector stabilize.
- The calibration check should be done in the "Search 2" mode. Once that is done, the other check modes do not need calibrating.
- When leak checking through the HVAC module drain hose, avoid drawing water into the probe. Water can damage the internal pump and sensor.
- Avoid creasing the flexible probe extension. Creases can restrict air flow and give false readings.
- Because the detector recalibrates itself for ambient gases, it may be necessary to move the detector away from the leak to clear the sensor. Once the sensor has cleared, recheck the suspected leak.
- When removing the clear probe tip, be careful not to lose the flow ball.
- R-134a is heavier than air; always check below and to the sides of all potential leak sources.
- Halogen leak detectors are sensitive to chemicals: windshield washing solutions, solvents/cleaners, and some vehicle adhesives. Keep these chemicals out of the area when doing leak detection.

GETtheMANUALS.org

Fluorescent Dye Usage Tips

- Use only Tracer-Stick single dose fluorescent dye capsules from Tracerline®. Other dyes contain solvents that may contaminate the refrigerant oil, leading to component failure.
- Adding excessive amounts of dye can damage the A/C compressor.
- PAG oil is water soluble, so condensation on the evaporator core or the refrigerant lines may wash the PAG oil and fluorescent dye away from the actual leak. Condensation may also carry dye through the HVAC module drain.
- After checking and repairing leaks, thoroughly clean any residual dye from the areas where leaks were found. Use GLO-AWAY dye cleaner, from Tracerline®, and hot water to remove the dye (follow the instructions on the bottle). Residual dye stains can cause misdiagnosis of any future A/C system leaks.
- If any refrigerant dye contacts an exterior paint surface, remove it by doing this:
  - Carefully wash the affected surfaces to remove any dirt, and to prevent paint scratching.
  - Mix water and isopropyl alcohol in a 50/50 mixture. Soak a soft 100 % cotton towel with the water/alcohol mixture, and place the cloth on the affected areas to remove the dye.
  - After removing the dye with the water/alcohol-soaked cloth, carefully wash the affected areas, and check that there is no remaining dye.

1. With the engine OFF, use a halogen leak detector first to detect the leak source. Follow a continuous path in order to ensure that you will not miss any possible leaks. Test the following areas of the system for leaks:

Possible Leak Area	Diagnostic Procedure with the Leak Detector	Notes
Service ports	• Check the service ports with caps installed • If the detector "sniffs" a leak, use fluorescent dye to confirm it	When capping the service ports, ensure that the seals on the port caps are in place, and that the caps are tight. The caps are used as the final seals in the system
A/C condenser	If the detector "sniffs" a leak, use fluorescent dye to confirm it	• Check for joints or connections coated with oily dust • Check for damaged and corroded areas • Check all fittings, couplings, brazed/welded areas and areas around attachment points • Move the probe slowly (1 in/second or less), and keep it within 1/4 in of the component being checked. This maximizes the chance of detecting a leak • If you detect a leak, blow compressed air over the area, then recheck for leaks. For large leaks, clearing the area with compressed air may help you pinpoint the leak source
	• Check at the evaporator	

GETtheMANUALS.org

Evaporator	drain hose • Check at the passenger's side vent and turn the blower on at low speed	
A/C lines	• Wiggle the rubber hoses when checking crimped metal ends • If the detector "sniffs" a leak, use fluorescent dye to confirm it	• Check all fittings, couplings, pressure switches, brazed/welded areas, and areas around attachment points on A/C lines and components • Check for damaged and corroded areas • Move the probe slowly (1 in/second or less), and keep it within 1/4 in of the component being checked. This maximizes the chance of detecting a leak

2. Close the quick coupler valves, then disconnect the quick couplers from the vehicle service ports.
3. Attach the universal connect set, from the Optimax Jr. Leak Detection Kit, to the service valve fitting. Close the control valve (the black knob on the connect set).
4. Attach the charging station low pressure hose quick coupler to the service valve fitting, and open the quick coupler valve. Evacuate the connect set using the charging station vacuum pump, then close the quick coupler valve.
5. Detach the universal connect set, and install a Tracer-Stick® dye capsule between the connect set and the service valve fitting (see the manufacturer's instructions for more detail).
6. Attach the quick coupler on the universal connect set to the low pressure service port on the vehicle. Open the charging station low pressure hose quick coupler valve, but do not open the control valve.
7. Start the engine, and set the A/C system to maximum cooling. Open the control valve to let refrigerant and the dye enter the A/C system through the low pressure service port. Close the control valve when the Tracer-Stick® dye capsule is empty.
8. Run the engine and A/C system for 15 minutes to thoroughly circulate the dye. Then shut the engine off, and inspect the following areas of the system for leaks:

NOTE:

- **Check for leaks in a dark work area, and use the UV light and the special glasses from the leak check kit. Other UV lights may not work well with the Tracer-Stick® dye.**
- **Small leaks may take up to 1 week of vehicle operation (with normal A/C use) to become visible.**

Possible Leak Area	Diagnostic Procedure with Fluorescent Dye
Service ports	If a leak is found, replace the cap/o-ring seal or A/C line as needed
A/C lines	• Use a permanent marker pen to circle the leak area • If a leak is found, remove and replace the A/C line

GETtheMANUALS.org

A/C condenser	• If a leak is found, remove the A/C condenser • Determine whether leak is in the A/C condenser or the receiver/dryer • Use a permanent marker pen to circle the leak area • Replace either the receiver/dryer, or the A/C condenser, depending upon which is leaking
A/C compressor	• Check for leaks at all of the A/C compressor joints, the clutch center, the A/C compressor front housing bolts, and the scroll bolts on the back of the A/C compressor • If a leak is found, use a permanent marker pen to circle the leak area • If the A/C compressor relief valve appears to be leaking, determine whether the leak is coming from the relief valve, or the joint between the A/C compressor casing and the valve. If the leak is from the relief valve, check the A/C system pressures, and refer to the pressure test table in the A/C system test. If the leak is from the casing/valve joint, replace the A/C compressor relief valve • If the leak is coming from the suction hose and/or discharge hose fittings on the A/C compressor, clean the A/C fittings and replace the suction/discharge fitting O-rings • For all other A/C compressor leaks, remove and replace the A/C compressor
Evaporator	• Start checking for evaporator leaks by illuminating the evaporator drain tube area • If a leak is found, remove the evaporator core • Determine whether leak is from evaporator or expansion valve • Use a permanent marker pen to circle leak area • Replace the expansion valve, or the evaporator core, depending upon which is leaking

18. A/C System - Test
    1. Insert a thermometer (A) in the center vent.
    2. Place a hygro-thermometer (B) near the blower unit's recirculation inlet duct.
    3. Test conditions:
        - Move the vehicle out of direct sunlight and let it cool down to the surrounding (ambient) temperature. If necessary, wash the vehicle to cool it down more quickly.
        - The blower intake temperature must be at least 68°F (20°C).
        - Open the hood.
        - Open the front doors.
        - Start the engine.
        - Set the temperature control dial or temperature control button to MAX COOL, the mode control button to VENT, and the recirculation control button to RECIRCULATE.
        - Turn the A/C button on and the fan control dial or fan control button to Max.

GETtheMANUALS.org

- Run the engine at 1, 500 rpm.
- No driver or passengers in vehicle.

Fig. 574: Checking Delivery Temperature From Thermometer In Center Vent
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Inspect the A/C components for the following conditions:
   - A/C compressor clutch not engaged.
   - Abnormal frost areas.
   - Unusual noises.

   If you observe any of these conditions, refer to the Symptom Troubleshooting Index.

5. After running the air conditioning for 10 minutes under the above test conditions, read the delivery temperature from the thermometer in the center vent, the intake temperature near the blower unit, and the discharge (high) and suction (low) pressures on the A/C gauges.
6. To complete the vent (delivery)/intake temperature chart:
   - Mark the vent (delivery) temperature on the vertical line.
   - Mark the intake temperature on the bottom line.
   - Draw a vertical line from the intake temperature mark.
   - Draw a horizontal line from the vent (delivery) temperature mark until it intersects the vertical line.

   NOTE: The vent temperature and intake temperature should intersect in the shaded area. Any measurements outside the line may

GETtheMANUALS.org

indicate the need for further inspection.

Fig. 575: Intake Temperature Versus Vent (Delivery) Temperature Graph
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. To complete the high side (discharge) pressure/intake temperature chart:
   - Mark the high side (discharge) pressure on the vertical line.
   - Mark the intake temperature on the bottom line.
   - Draw a vertical line from the intake temperature mark.
   - Draw a horizontal line from the high side (discharge) pressure mark until it intersects the vertical line.

NOTE: **The high side pressure and intake temperature should intersect in the shaded area. Any measurements outside the line may indicate the need for further inspection.**

GETtheMANUALS.org

Fig. 576: Intake Temperature Versus High Side (Discharge) Pressure Graph
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. To complete the low side (suction) pressure/intake temperature chart:
   - Mark the low side (suction) pressure along the vertical line.
   - Mark the intake temperature along the bottom line.
   - Draw a vertical line from the intake temperature mark.
   - Draw a horizontal line from the low side (suction) pressure mark until it intersects the vertical line.

NOTE: **The low side pressure and intake temperature should intersect in the shaded area. Any measurements outside the line may indicate the need for further inspection.**

HOW TO TROUBLESHOOT THE CLIMATE CONTROL SYSTEM

HOW TO CHECK FOR DTCS WITH THE HDS

NOTE:

- **There are three methods used to check for DTCs. The recommended method is to use the Honda Diagnostic System (HDS) with the appropriate software, plugged into the data link connector (DLC).**
- **The second method is to run the self-diagnostic function built into the climate control unit.**
- **The third method is to use the B-CAN SYSTEM DIAGNOSIS TEST MODE A .**

1. Make sure the ignition switch is in LOCK (0).
2. Connect the HDS to the DLC (A) located under the driver's side of the dashboard.

Fig. 1: Identifying Data Link Connector (DLC)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Turn the ignition switch to ON (II).
4. Make sure the HDS communicates with the vehicle and the climate control unit. If it does not, go to the **DLC CIRCUIT TROUBLESHOOTING** .
5. Select HVAC/Climate Control in the BODY ELECTRICAL menu.
6. Select DTCs in the HVAC/Climate Control Mode Menu.
7. Check for DTCs. If any DTCs are indicated, write down the DTCs, then go to the indicated DTC troubleshooting. If no DTCs are indicated, do all system scan, then refer to symptom troubleshooting.

GETtheMANUALS.org

NOTE:

- **After troubleshooting, clear the DTCs with the HDS.**
- **For specific operations, refer to the user's manual that came with the HDS.**

HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITH THE HDS

NOTE: **This method is only available if the HDS can communicate with the climate control unit.**

1. Make sure the ignition switch is in LOCK (0).
2. Connect the HDS to the DLC.
3. Turn the ignition switch to ON (II).
4. Make sure the HDS communicates with the vehicle and the climate control unit. If it does not, go to the **DLC CIRCUIT TROUBLESHOOTING** .
5. Select HVAC/Climate Control in the BODY ELECTRICAL menu.
6. Select Inspection in the HVAC/Climate Control Mode Menu.
7. Select Climate Control Unit Self Test in the Inspection Menu.
8. Check for DTCs. If any DTCs are indicated, write down the DTCs, then go to the indicated DTC troubleshooting.

NOTE:

- **After troubleshooting, clear the DTCs with the HDS.**
- **For specific operations, refer to the user's manual that came with the HDS.**

HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITHOUT THE HDS

The climate control unit has a self-diagnostic function. To run the self-diagnostic function, do the following:

1. Turn the ignition switch to LOCK (0), and then back to ON (II).
2. Press and hold the ON/OFF button, then within 10 seconds press and release the REAR WINDOW DEFOGGER/MIRROR DEFOGGER* button five times. Release the ON/OFF button.

   *: With mirror defogger

3. ALL LCD segments come on for 2 seconds, then the self-diagnostic function begins.

NOTE:

- **The blower motor will run at various speeds regardless of what the panel is displaying.**
- **If there is any problem in the system, the system flashes 88 or alternately flashes 88. Refer to CHECKING FOR DTCS.**
- **If there is more than one DTC, they are displayed one at a time in sequence followed by a pause (all the display indicator segment**

GETtheMANUALS.org

illuminate) between the DTCs.

- **If there are no problems detected, the system will flashes no.**

Fig. 2: Identifying Fan Control And ON/OFF Buttons And Driver's Temperature Indicator
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Canceling the Self-Diagnostic Function

4. Turn the ignition switch to LOCK (0) to cancel the self-diagnostic function. After completing repair work, run the self-diagnostic function again to make sure that there are no other DTCs.

HOW TO CHECK THE PAST DTC'S

The climate control unit can record DTCs of the past trouble. How to read the past DTC is as follows.

1. Turn the ignition switch to LOCK (0), and then back to ON (II).
2. Press and hold both the AUTO and ON/OFF buttons.
3. During press and hold both the AUTO and ON/OFF buttons, the past trouble is indicate.

NOTE:

- **If there is any problem in the system, the system flashes 88 or alternately flashes 88. Refer to CHECKING FOR DTCS.**
- **If there is more than one DTC, they are displayed one at a time in sequence followed by a pause (all the display indicator segment illuminate) between the DTCs.**
- **If there are no problems detected, the system will flashes no.**

GETtheMANUALS.org

Fig. 3: Identifying ON/OFF, Auto And Windshield Defroster Buttons And Windshield Defroster Indicator
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Canceling the read past DTC's

4. Turn the ignition switch to LOCK (0), to cancel the read past DTC's. After completing the repair work, clear the DTCs.

HOW TO CLEAR THE PAST DTC'S

1. Turn the ignition switch to LOCK (0).
2. Press and hold both the AUTO and WINDSHIELD DEFROSTER buttons, then turn the ignition switch to ON (II).
3. After about 5 seconds the windshield defroster indicator starts to blink, release the buttons. The indicator will blink 5 times then stop.
4. Do the How to check the past DTC's to verify DTC's have been cleared.

CHECKING FOR DTCS

The driver's temperature indicator indicates single or multiple DTCs. If no DTCs are present, the indicator will flashes no.

NOTE: **If the driver's temperature indicator segments 05, 07, 09, 40, 43, 49, 55, and 89 indicator are on at the same time, there may be an open in the sensor common ground wire.**

DISPLAYING SENSOR INPUTS AT THE CLIMATE CONTROL UNIT

The climate control unit has a mode that displays the sensor inputs it receives. This mode shows you what the climate control unit is receiving from each of the sensors, one at a time, and it can help you determine if a sensor is faulty.

CHECKS BEFORE USING THE SENSOR INPUT DISPLAY MODE

1. Turn the ignition switch to ON (II), and check the recirculation door function; press the

GETtheMANUALS.org

RECIRCULATION button to switch from FRESH to RECIRC. The air volume and sound should change slightly.

2. Set the temperature control dial to the desired test temperature:
   - "Lo" temperature setting will default to MAX COOL, VENT, and RECIRC (A/C on) or FRESH (A/C off).
   - "Hi" temperature setting will default to MAX HOT, HEAT or HEAT/DEF, and FRESH.
   - 58 through 86 °F (14 through 30 °C) settings will use the automatic climate control logic.
3. Turn the ignition switch to LOCK (0).

RUN THE SENSOR INPUT DISPLAY MODE

1. Turn the ignition switch to LOCK (0), and then back to ON (II).
2. Press and hold both the AUTO and RECIRCULATION buttons, then start the engine.

Fig. 5: Identifying Recirculation And Auto Buttons
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. After the engine starts, release both buttons. The climate control unit will flash the sensor number and then the value for that sensor. Record the value displayed.
4. To advance to the next sensor, press the REAR WINDOW DEFOGGER/MIRROR DEFOGGER* button.

   *: With mirror defogger

NOTE:

- **The sensor values will be displayed in degrees Celsius (°C) or an alphanumeric code. Use the chart to convert the value to degree Fahrenheit (°F).**
- **If the sensor value displays "Er", this indicates there is an open or short in the circuit or sensor. Check for DTCs using the HDS, o use the climate control self-diagnostic function.**
- **If necessary, compare the sensor input display to a known-good vehicle under the same test conditions.**
- **If the sensor displayed value is out of the normal range, refer to the sensor test or substitute a known-good sensor, and recheck.**

HOW TO TROUBLESHOOT THE HEATING AND A/C SYSTEMS

HOW TO USE THE SELF-DIAGNOSTIC FUNCTION

The HVAC control unit has a self-diagnostic function for the heating, ventilation, and air conditioning system. To run the self-diagnostic function, do the following:

1. Turn the ignition switch to LOCK (0), and then back to ON (II).
2. Set the fan control dial to OFF, temperature control dial to Max Cool, the VENTILATION button to ON.
3. Press and hold the RECIRCULATION button, then within 10 seconds press and release the REAR WINDOW DEFOGGER/MIRROR DEFOGGER* button five times. Release the RECIRCULATION button.

   *: With mirror defogger

4. The recirculation indicator turns on for 2 seconds, then the self-diagnostic function begins.

NOTE:

- **The blower motor will run at various speeds when in the self-diagnostic mode.**
- **Once the self-diagnostic function is finished, the recirculation indicator blinks, and the number of blinks indicates the Diagnostic Trouble Code (DTC) number. If there are multiple DTCs, the indicator blinks each DTC in sequence from the lowest DTC number to the highest.**

GETtheMANUALS.org

- **The indicator pauses 3 seconds, then repeats the DTC blink sequence.**
- **If no DTCs are found, the indicator will not blink.**
- **When the problem is repaired, DTCs will automatically clear.**

9	A problem in the recirculation control motor circuit, linkage, door, or, motor
10	A problem in the blower motor circuit
11	HVAC control unit internal error
12	An open in the evaporator temperature sensor circuit
13	A short in the evaporator temperature sensor circuit

Canceling the Self-Diagnostic Function

5. Turn the ignition switch to LOCK (0), to cancel the self-diagnostic function. After completing the repair work, run the self-diagnostic function again to make sure that there are no other DTCs.

HOW TO CHECK THE PAST DTC'S

The HVAC control unit can record DTCs of the past trouble. How to read the past DTC is as follows.

1. Turn the ignition switch to LOCK (0).
2. Set the fan control dial to OFF, temperature control dial to Max Cool, the VENTILATION button to ON.
3. Press and hold both the RECIRCULATION and the VENTILATION buttons, and turn the ignition switch ON (II).
4. The ventilation indicator turns on for 2 seconds, then the past trouble is indicated.

NOTE:

- **In the case of multiple problems, the ventilation indicator will blink the lowest number DTC first.**
- **If no DTCs are found, the indicator will only blink two times.**

Canceling the read past DTC's

5. Turn the ignition switch to LOCK (0), to cancel the read past DTC's. After completing the repair work, clear the DTCs.

HOW TO CLEAR THE PAST DTC'S

1. Turn the ignition switch to LOCK (0).
2. Set the fan control dial to OFF, temperature control dial to Max Cool, the VENTILATION button to ON.
3. Press and hold both the RECIRCULATION and WINDSHIELD DEFROSTER buttons, then turn the ignition switch to ON (II).
4. After about 5 seconds the windshield defroster indicator starts to blink, release the buttons. The indicator will blink 5 times then stop.
5. Do the display DTC function to verify DTC's have been cleared.

NOTE:

- **It is normal for the A/C compressor to turn off under certain conditions,**

GETtheMANUALS.org

such as low idle, high engine coolant temperature, or hard acceleration.

- **Do not use this troubleshooting procedure if the fans are also inoperative with the A/C on. Refer to the symptom troubleshooting index.**
- **Before doing symptom troubleshooting, check for PGM-FI DTCs See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

1. Fuse check:
   - 1. Check the following fuse.

     Fuse No. A27 (7.5 A)

     Location Under-hood fuse/relay box

   Is the fuse OK?

   YES : Go to step 2.

   NO : Replace the fuse, and recheck. If the fuse blows again, check for a short in the No. A27 (7.5 A) fuse circuit.

2. A/C pressure threshold check:
   - 1. Connect the HDS to the DLC.
   - 2. Start the engine.
   - 3. Set the A/C button and the fan control button to ON.
   - 4. Using the HDS, check the under following conditions:

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
ENGINE SPEED	710 - 810	rpm		
ECT SENSOR 2	176 - 212	°F		
	80 - 100	°C		
TP SENSOR	About 0.5	V		

   - 5. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
A/C PRESSURE	196 - 3, 38	kPa		
	2.00 - 32.00	kgf/cm^2		
	28.4 - 455.1	psi		

   Do the current condition(s) match the threshold?

GETtheMANUALS.org

YES : Go to step 3.

NO : Go to the **A/C SYSTEM TEST RESULT**.

3. Climate control system check:
   - 1. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
A/C SWITCH	ON			
A/C CLUTCH	ON			

Do the current condition(s) match the threshold?

YES : Go to step 4.

NO : A/C SWITCH is OFF, go to the **A/C SIGNAL CIRCUIT TROUBLESHOOTING**.

NO : A/C SWITCH is ON and A/C CLUTCH is OFF, **update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , and recheck.

4. A/C compressor clutch relay check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Remove the A/C compressor clutch relay from the under-hood fuse/relay box, and **test it** See **POWER RELAY TEST** or **POWER RELAY TEST** .

Is the relay OK?

YES : Go to step 5.

NO : Replace the A/C compressor clutch relay.

5. Open wire check (+B MG CLUTCH line):
   - 1. Measure the voltage between test points 1 and 2.

     Test condition IG LOCK (0)

     A/C compressor clutch relay: disconnected

     Test circuit +B MG CLUTCH

     Test point 1 A/C compressor clutch relay 4P socket No. 1 (PNK) (Built into the under-hood fuse/relay box)

GETtheMANUALS.org

Test point 2 Body ground

Fig. 13: Measuring Voltage Between Test Points 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The +B MG CLUTCH wire is OK. Go to step 6.

NO : An open in the +B MG CLUTCH wire. **REPLACE THE UNDER-HOOD FUSE/RELAY BOX** .

6. Determine possible failure area (A/C compressor clutch relay switch side circuit, A/C compressor clutch relay coil side circuit):
   - 1. Connect terminals A and B with a jumper wire.

     Terminal A A/C compressor clutch relay 4P socket No. 1 (PNK) (Built into the under-hood fuse/relay box)

     Terminal B A/C compressor clutch relay 4P socket No. 2 (PUR) (Built into the under-hood fuse/relay box)

Fig. 14: Connecting Terminals A And B Using Jumper Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Does the A/C compressor clutch click?

YES : Go to step 7.

GETtheMANUALS.org

NO : Go to step 9.

7. Open wire check (IG2 A/C line):
    - 1. Disconnect the jumper wire.
    - 2. Turn the ignition switch to ON (II).
    - 3. Measure the voltage between test points 1 and 2.

    Test condition IG ON (II)

    A/C compressor clutch relay: disconnected

    Test circuit IG2 A/C

    Test point 1 A/C compressor clutch relay 4P socket No. 7 (PNK) (Built into the under-hood fuse/relay box)

    Test point 2 Body ground

Fig. 15: Measuring Voltage Between Test Points 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The IG2 A/C wire is OK. Go to step 8.

NO : Repair an open in the wire between the No. B22 (7.5 A) fuse in under-dash fuse/relay box and the A/C compressor clutch relay.

8. Open wire check (A/C MG CLUTCH RLY CL- line):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Reinstall the A/C compressor clutch relay.
    - 3. Jump the SCS line with the HDS.

GETtheMANUALS.org

NOTE: **This step must be done to protect the PCM from damage.**

- 4. Disconnect the following connector.

  PCM connector A (49P)

- 5. Connect terminals A and B with a jumper wire.

  Terminal A PCM connector A (49P) terminal No. 12 (GRN)

  Terminal B Body ground

Fig. 16: Connecting Terminals A And B Using Jumper Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 6. Turn the ignition switch to ON (II).

Does the A/C compressor clutch click?

YES : **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , and recheck.

NO : Repair an open in the wire between the A/C compressor clutch relay and the PCM.

9. Open wire check (A/C MG CLUTCH line):
   - 1. Disconnect the jumper wire.
   - 2. Disconnect the following connector.

     A/C compressor clutch 3P connector

   - 3. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

GETtheMANUALS.org

A/C compressor clutch relay: disconnected

A/C compressor clutch 3P connector: disconnected

Test circuit A/C MG CLUTCH

Test point 1 A/C compressor clutch relay 4P socket No. 2 (PUR) (Built into the under-hood fuse/relay box)

Test point 2 A/C compressor clutch 3P connector No. 1 (BLU)

Fig. 17: Checking For Continuity Between Test Points 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The A/C MG CLUTCH wire is OK. Check the **A/C COMPRESSOR CLUTCH CLEARANCE** and the **A/C COMPRESSOR CLUTCH FIELD COIL** . Repair as needed.

NO : Repair an open in the wire between the A/C compressor clutch relay and the A/C compressor clutch.

A/C COMPRESSOR CLUTCH CIRCUIT TROUBLESHOOTING (MANUAL A/C)

GETtheMANUALS.org

A/C Compressor Clutch Circuit Troubleshooting

Fig. 18: A/C Compressor Clutch Circuit Troubleshooting Flow Chart
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **It is normal for the A/C compressor to turn off under certain conditions,**

GETtheMANUALS.org

such as low idle, high engine coolant temperature, or hard acceleration.

- **Do not use this troubleshooting procedure if the radiator and A/C condenser fans are also inoperative with the A/C on. Refer to the symptom troubleshooting index.**
- **Before doing symptom troubleshooting, check for PGM-FI DTCs See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

1. Fuse check:
   - 1. Check the following fuse.

     Fuse No. A27 (7.5 A)

     Location Under-hood fuse/relay box

   Is the fuse OK?

   YES : Go to step 2.

   NO : Replace the fuse, and recheck. If the fuse blows again, check for a short in the No. A27 (7.5 A) fuse circuit.

2. A/C pressure threshold check:
   - 1. Connect the HDS to the DLC.
   - 2. Start the engine.
   - 3. Set the A/C button and the fan control dial to ON.
   - 4. Using the HDS, check the under following conditions:

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
ENGINE SPEED	710 - 810	rpm		
ECT SENSOR 2	176 - 212	°F		
	80 - 100	°C		
TP SENSOR	About 0.5	V		

   - 5. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
A/C PRESSURE	196 - 3, 38	kPa		
	2.00 - 32.00	kgf/cm^2		
	28.4 - 455.1	psi		

GETtheMANUALS.org

Do the current condition(s) match the threshold?

YES : Go to step 3.

NO : Go to the **A/C SYSTEM TEST RESULT**.

3. HVAC control system check:
   - 1. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
A/C SWITCH	ON			
A/C CLUTCH	ON			

Do the current condition(s) match the threshold?

YES : Go to step 4.

NO : A/C SWITCH is OFF, go to the **A/C SIGNAL CIRCUIT TROUBLESHOOTING**.

NO : A/C SWITCH is ON and A/C CLUTCH is OFF, **UPDATE THE PCM substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , and recheck.

4. A/C compressor clutch relay check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Remove the A/C compressor clutch relay from the under-hood fuse/relay box, and **TEST IT** .

Is the relay OK?

YES : Go to step 5.

NO : Replace the A/C compressor clutch relay.

5. Open wire check (+B MG CLUTCH line):
   - 1. Measure the voltage between test points 1 and 2.

     Test condition IG LOCK (0)

     A/C compressor clutch relay: disconnected

     Test circuit +B MG CLUTCH

     Test point 1 A/C compressor clutch relay 4P socket No. 1 (PNK) (Built into the under-hood fuse/relay box)

GETtheMANUALS.org

Test point 2 Body ground

Fig. 19: Measuring Voltage Between Test Points 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The +B MG CLUTCH wire is OK. Go to step 6.

NO : An open in the +B MG CLUTCH wire. **REPLACE THE UNDER-HOOD FUSE/RELAY BOX** .

6. Determine possible failure area (A/C compressor clutch relay switch side circuit, A/C compressor clutch relay coil side circuit):
   - 1. Connect terminals A and B with a jumper wire.

     Terminal A A/C compressor clutch relay 4P socket No. 1 (PNK) (Built into the under-hood fuse/relay box)

     Terminal B A/C compressor clutch relay 4P socket No. 2 (PUR) (Built into the under-hood fuse/relay box)

Fig. 20: Connecting Terminals A And B Using Jumper Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Does the A/C compressor clutch click?

YES : Go to step 7.

GETtheMANUALS.org

NO : Go to step 9.

7. Open wire check (IG2 A/C line):
    - 1. Disconnect the jumper wire.
    - 2. Turn the ignition switch to ON (II).
    - 3. Measure the voltage between test points 1 and 2.

    Test condition IG ON (II)

    A/C compressor clutch relay: disconnected

    Test circuit IG2 A/C

    Test point 1 A/C compressor clutch relay 4P socket No. 7 (PNK) (Built into the under-hood fuse/relay box)

    Test point 2 Body ground

Fig. 21: Measuring Voltage Between Test Points 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The IG2 A/C wire is OK. Go to step 8.

NO : Repair an open in the wire between the No. B22 (7.5 A) fuse in the under-dash fuse/relay box and the A/C compressor clutch relay.

8. Open wire check (A/C MG CLUTCH RLY CL- line):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Reinstall the A/C compressor clutch relay.
    - 3. Jump the SCS line with the HDS.

GETtheMANUALS.org

NOTE: **This step must be done to protect the PCM from damage.**

- 4. Disconnect the following connector.

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there current flow in only one direction?

YES : An open in No. A8 (7.5 A) fuse circuit wire. **REPLACE THE UNDER-HOOD FUSE/RELAY BOX** .

NO : Replace A/C diode A.

A/C DIAGNOSTIC PROCESS

When a customer presents A/C concern, do the following procedure to identify the cause of the problem.

1. Confirm the type of concern.
   - If a customer presents about A/C noise problem, do the **A/C System Noise Check** .
   - If a customer presents about A/C performance problem, go to step 2.
2. Do the **A/C System Inspection** and repair any problems. If no problems are found, then go to step 3.
3. **Recover the refrigerant from the A/C system** See **A/C REFRIGERANT RECOVERY** , **A/C SYSTEM CHARGING** or **A/C System Evacuation** and measure the refrigerant charge from the A/C system using a recovery/recycling/charging station that meets SAE J2788 standards.
   - If the refrigerant charge is within specifications, **evacuate** See **A/C REFRIGERANT RECOVERY** , **A/C SYSTEM CHARGING** or **A/C System Evacuation** and **recharge the system** See **A/C REFRIGERANT RECOVERY** , **A/C SYSTEM CHARGING** or **A/C System Evacuation** . Then go to step 4.
   - If the refrigerant charge is significantly under specifications, then go to step 5.
   - If the refrigerant charge is significantly over specifications, **evacuate** See **A/C REFRIGERANT RECOVERY** , **A/C SYSTEM CHARGING** or **A/C System Evacuation** and **recharge the system** See **A/C REFRIGERANT RECOVERY** , **A/C SYSTEM CHARGING** or **A/C System Evacuation** . Then go to step 7.
4. Do the **A/C System Test** .
   - If vent temperature or suction/discharge pressures are not within specifications, diagnose and repair the A/C system as needed. Then go to step 6.

GETtheMANUALS.org

- If no problems are found, the A/C system is operating as designed and the A/C diagnostic process is complete.

5. Do the **REFRIGERANT LEAK CHECK** .
   - If any leaks are found, repair the A/C system as needed. Then go to step 6.
   - If no leaks are found, go to step 7.
6. **Evacuate** See **A/C REFRIGERANT RECOVERY** , **A/C SYSTEM CHARGING** or **A/C System Evacuation** and **recharge the system** See **A/C REFRIGERANT RECOVERY** , **A/C SYSTEM CHARGING** or **A/C System Evacuation** . Then go to step 7.
7. Do the **A/C System Test** to confirm your repairs.
   - If vent temperature or suction/discharge pressures are within specifications, the repair is confirmed and the A/C diagnostic process is complete.
   - If vent temperature or suction/discharge pressures are not within specifications, a problem may still exist. Return to step 1 and recheck your test procedures.

A/C SIGNAL CIRCUIT TROUBLESHOOTING (CLIMATE CONTROL)

GETtheMANUALS.org

A/C Signal Circuit Troubleshooting

Fig. 36: A/C Signal Circuit Troubleshooting Flow Chart
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Do not use this troubleshooting procedure if any of the following items are**

GETtheMANUALS.org

operative with the A/C button and the fan control dial to ON: The A/C condenser fan, the radiator fan, or the A/C compressor. Refer to the symptom troubleshooting index.

- **Do not use this troubleshooting procedure if the A/C system pressure is abnormal.**
- **Before doing symptom troubleshooting, check for PGM-FI DTCs See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**

1. Blower motor operation check:
   - 1. Turn the ignition switch to ON (II).
   - 2. Check that the blower motor operates at all speeds.

   Does the blower motor operate at all speeds?

   YES : Go to step 2.

   NO : **REPAIR THE PROBLEM IN THE BLOWER MOTOR CIRCUIT** .

2. Evaporative outlet air temperature check:
   - 1. Start the engine.
   - 2. Set the A/C button and the fan control button to ON.
   - 3. **Do the sensor input display mode** See **HOW TO TROUBLESHOOT THE BODY ELECTRICAL** or **HOW TO TROUBLESHOOT THE CLIMATE CONTROL SYSTEM**.

   Is Sensor #5 (evaporative outlet air temperature) above 3°C?

   YES : Go to step 3.

   NO : Go to step 10.

3. A/C pressure threshold check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Connect the HDS to the DLC.
   - 3. Start the engine.
   - 4. Set the A/C button and the fan control button to ON.
   - 5. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
A/C PRESSURE	196 - 3, 38	kPa		
	2.00 - 32.00	kgf/cm^2		
	28.4 - 455.1	psi		

GETtheMANUALS.org

Do the current condition(s) match the threshold?

YES : Go to step 4.

NO : Go to the **A/C SYSTEM TEST RESULT**.

4. Climate control system check:
   - 1. Using the HDS, confirm the following values in the PGM-FI Data List at idle.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
A/C SWITCH	ON			
A/C CLUTCH	ON			

Do the current condition(s) match the threshold?

YES : Go to the **A/C COMPRESSOR CLUTCH CIRCUIT TROUBLESHOOTING**.

NO : A/C SWITCH is OFF, go to step 5.

NO : A/C SWITCH is ON and A/C CLUTCH is OFF, high ETC 2 will cause the clutch to be off and switch on, **update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , and recheck.

5. ACS/THERMAL PRT line voltage check:
   - 1. Turn the ignition switch to LOCK (0)
   - 2. Disconnect the following connector.

     Climate control unit 32P connector

   - 3. Turn the ignition switch to ON (II).
   - 4. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     Climate control unit 32P connector: disconnected

     Test circuit ACS

     Test point 1 Climate control unit 32P connector No. 24 (LT GRN)

     Test point 2 Body ground

GETtheMANUALS.org

Fig. 37: Measuring Voltage Between Test Points 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The ACS/THERMAL PRT wire is OK. Go to step 6.

NO : Go to step 7.

6. Climate control unit check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Reconnect the climate control unit 32P connector.
   - 3. Start the engine.
   - 4. Set the A/C button and the fan control button to ON.
   - 5. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     Test circuit ACS

     Test point 1 Climate control unit 32P connector No. 24 (LT GRN)

     Test point 2 Body ground

GETtheMANUALS.org

Fig. 38: Measuring Voltage Between Test Points 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there 0.2 V or less?

YES : **REPLACE THE UNDER-DASH FUSE/RELAY BOX** .

NO : **REPLACE THE CLIMATE CONTROL UNIT** .

7. Open wire check (THERMO/THERMAL PRT line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     A/C compressor clutch 3P connector

   - 3. Turn the ignition switch to ON (II).
   - 4. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     Climate control unit 32P connector: disconnected

     A/C compressor clutch 3P connector: disconnected

     Test circuit THERMO

     Test point 1 A/C compressor clutch 3P connector No. 2 (LT BLU)

     Test point 2 Body ground

Fig. 39: Measuring Voltage Between Test Points 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : THERMO/THERMAL PRT wire is OK. Go to step 8.

GETtheMANUALS.org

NO : Go to step 9.

8. A/C compressor thermal protector check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. **TEST THE A/C COMPRESSOR THERMAL PROTECTOR** .

Is the A/C compressor thermal protector OK?

YES : Repair an open in the wire between the climate control unit and the A/C compressor.

NO : **REPLACE THE A/C COMPRESSOR THERMAL PROTECTOR** .

9. MICU check:
   - 1. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     Climate control unit 32P connector: disconnected

     A/C compressor clutch 3P connector: disconnected

     Test circuit THERMAL PRT

     Test point 1 Under-dash fuse/relay box connector D (32P) No. 31 (WHT)

     Test point 2 Body ground

Fig. 40: Measuring Voltage Between Test Points 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : Repair an open in the wire between the A/C compressor and the under-dash fuse/relay box.

GETtheMANUALS.org

NO : **REPLACE THE UNDER-DASH FUSE/RELAY BOX** .

10. Evaporator temperature sensor check:
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Disconnect the following connector.

      Climate control unit 32P connector

    - 3. Measure the resistance between test points 1 and 2.

      Test condition IG LOCK (0)

      Climate control unit 32P connector: disconnected

      Test circuit TEVA, SENSOR COM

      Test point 1 Climate control unit 32P connector No. 18 (ORN)

      Test point 2 Climate control unit 32P connector No. 23 (GRY)

Fig. 41: Measuring Resistance Between Test Points 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is the resistance less than 24 kohms?

YES : **REPLACE THE CLIMATE CONTROL UNIT** .

NO : **TEST THE EVAPORATOR TEMPERATURE SENSOR** .

A/C SIGNAL CIRCUIT TROUBLESHOOTING (MANUAL A/C)

GETtheMANUALS.org

A/C Signal Circuit Troubleshooting

Fig. 42: A/C Signal Circuit Troubleshooting Flow Chart
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Do not use this troubleshooting procedure if any of the following items are**

GETtheMANUALS.org

operative with the A/C button and the fan control dial to ON: The A/C condenser fan, the radiator fan, or the A/C compressor. Refer to the symptom troubleshooting index.

- **Before doing symptom troubleshooting, check for PGM-FI DTCs See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS .**
- **Do not use this troubleshooting procedure if the A/C system pressure is abnormal.**

1. Blower motor operation check:
   - 1. Turn the ignition switch to ON (II).
   - 2. Check if the blower motor operates at all speeds.

   Does the blower motor operate at all speeds?

   YES : Go to step 2.

   NO : **REPAIR THE PROBLEM IN THE BLOWER MOTOR CIRCUIT** .

2. A/C pressure threshold check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Connect the HDS to the DLC.
   - 3. Start the engine.
   - 4. Set the A/C button and the fan control dial to ON.
   - 5. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
A/C PRESSURE	196 - 3, 38	kPa		
	2.00 - 32.00	kgf/cm^2		
	28.4 - 455.1	psi		

   Do the current condition(s) match the threshold?

   YES : Go to step 3.

   NO : Go to the **A/C SYSTEM TEST RESULT**.

3. HVAC control system check:
   - 1. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit

GETtheMANUALS.org

A/C SWITCH	ON			
A/C CLUTCH	ON			

Do the current condition(s) match the threshold?

YES : Go to the **A/C COMPRESSOR CLUTCH CIRCUIT TROUBLESHOOTING**.

NO : A/C SWITCH is OFF, go to step 4.

NO : A/C SWITCH is ON and A/C CLUTCH is OFF, high ETC 2 will cause the clutch to be off and switch on, **update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , and recheck.

4. ACS/THERMAL PRT line voltage check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     HVAC control unit 32P connector

   - 3. Turn the ignition switch to ON (II).
   - 4. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     HVAC control unit 32P connector: disconnected

     Test circuit ACS

     Test point 1 HVAC control unit 32P connector No. 25 (LT GRN)

     Test point 2 Body ground

Fig. 43: Measuring Voltage Between Test Points 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

Is there battery voltage?

YES : Go to step 5.

NO : Go to step 6.

5. Determine possible failure area (MICU, others):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Reconnect the HVAC control unit 32P connector.
    - 3. Start the engine.
    - 4. Set the A/C button and the fan control dial to ON.
    - 5. Measure the voltage between test points 1 and 2.

    Test condition IG ON (II)

    Test circuit ACS

    Test point 1 HVAC control unit 32P connector No. 25 (LT GRN)

    Test point 2 Body ground

Fig. 44: Measuring Voltage Between Test Points 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there 0.2 V or less?

YES : **REPLACE THE UNDER-DASH FUSE/RELAY BOX** .

NO : Go to step 9.

6. Open wire check (THERMO/THERMAL PRT line):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Disconnect the following connector.

    A/C compressor clutch 3P connector

GETtheMANUALS.org

- 3. Turn the ignition switch to ON (II).
- 4. Measure the voltage between test points 1 and 2.

  Test condition IG ON (II)

  HVAC control unit 32P connector: disconnected

  A/C compressor clutch 3P connector: disconnected

  Test circuit THERMO

  Test point 1 A/C compressor clutch 3P connector No. 2 (LT BLU)

  Test point 2 Body ground

Fig. 45: Measuring Voltage Between Test Points 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : THERMO/THERMAL PRT wire is OK. Go to step 7.

NO : Go to step 8.

7. A/C compressor thermal protector check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. **TEST THE A/C COMPRESSOR THERMAL PROTECTOR** .

Is the A/C compressor thermal protector OK?

YES : Repair an open in the wire between the HVAC control unit and the A/C compressor.

NO : **REPLACE THE A/C COMPRESSOR THERMAL PROTECTOR** .

8. MICU check:
   - 1. Measure the voltage between test points 1 and 2.

GETtheMANUALS.org

Test condition IG ON (II)

Test circuit THERMAL PRT

HVAC control unit 32P connector: disconnected

A/C compressor clutch 3P connector: disconnected

Test point 1 Under-dash fuse/relay box connector D (32P) No. 31 (WHT)

Test point 2 Body ground

Fig. 46: Measuring Voltage Between Test Points 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : Repair an open in the wire between the A/C compressor and the under-dash fuse/relay box.

NO : **REPLACE THE UNDER-DASH FUSE/RELAY BOX** .

9. Evaporator temperature sensor check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Measure the resistance between test points 1 and 2.

   Test condition IG LOCK (0)

   HVAC control unit 32P connector: disconnected

   Test circuit TEVA, SENSOR COM

   Test point 1 HVAC control unit 32P connector No. 19 (ORN)

   Test point 2 HVAC control unit 32P connector No. 20 (GRY)

GETtheMANUALS.org

Fig. 47: Measuring Resistance Between Test Points 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is resistance less than 24 kohms?

YES : **REPLACE THE HVAC CONTROL UNIT** .

NO : **TEST THE EVAPORATOR TEMPERATURE SENSOR** .

A/C SIGNAL CIRCUIT TROUBLESHOOTING IDLE CONTROL SYSTEM

GETtheMANUALS.org

Fig. 48: A/C Signal Circuit Troubleshooting Flow Chart
Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. A/C compressor clutch condition check:
    - 1. Start the engine, and let it idle.
    - 2. Turn the blower switch on.
    - 3. Turn the A/C switch on.
    - 4. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
A/C CLUTCH	ON			

Do the current condition(s) match the threshold?

YES : Go to step 2.

NO : Do the **A/C System Test**

GETtheMANUALS.org

2. A/C system check:
    - 1. Check the A/C system.

    Does the A/C system operate?

    YES : The A/C system circuit is OK.

    NO : Go to step 3.

3. A/C compressor clutch circuit check:
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Turn the ignition switch to ON (II).
    - 3. Activate the A/C CLUTCH in the INSPECTION MENU with the HDS.

    Is there a clicking noise from the A/C compressor clutch?

    YES : The A/C compressor clutch circuit is OK. Do the **A/C System Test** .

    NO : Go to step 4.

4. Open wire check (A/C MG CLUTCH RLY CL- line):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Jump the SCS line with the HDS.
    - 3. Disconnect the following connector.

      PCM connector A (49P)

    - 4. Turn the ignition switch to ON (II).
    - 5. Connect terminals A and B with a jumper wire.

      Terminal A PCM connector A (49P) No. 12 (GRN)

      Terminal B Body ground

GETtheMANUALS.org

Fig. 49: Connecting Terminals A And B With Jumper Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there a clicking noise from the A/C compressor clutch?

YES : The A/C MG CLUTCH RLY CL- wire is OK. **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , then recheck. If the symptom/indication goes away and the PCM was updated, troubleshooting is complete. If the symptom/indication goes away and the PCM was substituted, **replace the original PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** .

NO : Check for poor connections or loose terminals at the A/C compressor clutch relay and the PCM. If the connections and terminals are OK, check the A/C compressor clutch relay. If needed, repair open in the A/C MG CLUTCH RLY CL- wire between the PCM (A12) and the A/C compressor clutch relay, or other parts in the A/C systems.

AIR MIX CONTROL MOTOR TEST

SPECIAL TOOL DESCRIPTION

Image	Description/Tool Number
	Backprobe Set 07SAZ-001000A (2)

TEST

NOTE: Before testing the motor, check for HVAC DTCs.

1. Air Mix Control Motor - Test
    1. Disconnect the air mix control motor connector.

NOTE: Incorrectly applying power and ground to the air mix control motor will damage it. Follow the instructions carefully.

GETtheMANUALS.org

Fig. 50: Identifying Air Mix Control Motor Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Connect battery power to terminal No. 7 of the air mix control motor, and ground terminal No. 6; the air mix control motor should run smoothly, and stop at MAX HOT. If it does not, reverse the connections; the air mix control motor should run smoothly, and stop at MAX COOL. When the air mix control motor stops running, disconnect battery power immediately.
3. If the air mix control motor did not run in step 2, remove it, then check the air mix control linkage and door for smooth movement.
   - If the linkage and door move smoothly, go to step 4.
   - If the linkage or door sticks or binds, repair them as needed.
4. Measure the resistance between terminals No. 1 and No. 3. It should be between 4.2 kohms and 7.8 kohms.
5. Reconnect the air mix control motor connector.
6. Turn the ignition switch to ON (II).
7. Using the backprobe set, measure the voltage between terminals No. 1 and No. 2.

   MAX COOL: About 0.5 V

   MAX HOT: About 4.0 V

8. If either the resistance or the voltage readings are not as specified, replace the air mix control motor.

BLOWER POWER TRANSISTOR TEST (CLIMATE CONTROL)

REMOVAL

1. Passenger's Dashboard Undercover
   1. Gently pull down the passenger's dashboard undercover (A) to detach the clips (B), then pull away the undercover to release the pins (C) from the holder (D).

GETtheMANUALS.org

TEST

GETtheMANUALS.org

1. Power Transistor - Test
    1. Measure the resistance between terminals No. 2 and No. 4 of the power transistor. It should be about 1.5 kohms.
        - If the resistance is within the specifications, go to step 3.
        - If the resistance is not within the specifications, replace the power transistor.

        NOTE: Also check the blower motor. Power transistor failure can be caused by a defective blower motor.

    2. Reconnect the power transistor connector.

Fig. 61: Identifying Power Transistor Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Connect climate control unit connector terminals No. 7 and No. 12 with a jumper wire.
4. Turn the ignition switch to ON (II).
5. Check that the blower motor runs.
    - If the blower motor does not run, replace the power transistor.

    NOTE: A faulty blower motor can cause the power transistor to fail. Before replacing the power transistor, check the blower motor for binding, and replace it if necessary.

    - If the blower motor runs, the power transistor is OK.

CLIMATE CONTROL SYSTEM DTC TROUBLESHOOTING INDEX

DTC	Detection Item or Symptom	ECU	DTC type
U1280	Communication bus line error (BUS-OFF)	Climate control unit	Loss of communication
U128D	Lost communication > with gauge control module (climate control unit)	Climate control unit	Loss of communication
B121A	An open in the mode control motor circuit	Climate control unit	Signal error
B121B	A short in the mode control motor circuit	Climate control unit	Signal error
B121D	Humidity/in-car temperature sensor communication error	Climate control unit	Lost of communication
B1220	A short in the recirculation control motor circuit	Climate control unit	Signal error
B1227	An open in the outside air temperature sensor circuit	Climate control unit	Signal error
B1228	A short in the outside air temperature sensor circuit	Climate control unit	Signal error
		Climate control	

GETtheMANUALS.org

B1229	An open in the sunlight sensor circuit	unit	Signal error
B1230	A short in the sunlight sensor circuit	Climate control unit	Signal error
B1231	An open in the evaporator temperature sensor circuit	Climate control unit	Signal error
B1232	A short in the evaporator temperature sensor circuit	Climate control unit	Signal error
B1233	An open in the air mix control motor circuit (driver's)	Climate control unit	Signal error
B1234	A short in the air mix control motor circuit (driver's)	Climate control unit	Signal error
B1235	A problem in the air mix control motor circuit, linkage, door, or motor (driver's)	Climate control unit	Signal error
B1236	An open in the passenger's air mix control motor circuit	Climate control unit	Signal error
B1237	A short in the passenger's air mix control motor circuit	Climate control unit	Signal error
B1238	A problem in the passenger's air mix control motor circuit, linkage, door, or motor	Climate control unit	Signal error
B1240	A problem in the mode control motor circuit, linkage, door, or motor	Climate control unit	Signal error
B1241	A problem in the blower motor circuit	Climate control unit	Signal error
B2969	Climate control unit lost communication with MICU (WIPSW message)	Climate control unit	Loss of communication
B2983	A problem in the recirculation control motor circuit, linkage, door, or motor	Climate control unit	Signal error
B2986	An open in the recirculation control motor circuit	Climate control unit	Signal error

Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Do this troubleshooting procedure only if sent here by symptom troubleshooting.**

1. Fuse check:
   - 1. Check the following fuse.

     Fuse No. B22 (7.5 A)

GETtheMANUALS.org

Location Under-dash fuse/relay box

Is the fuse OK?

YES : Go to step 2.

NO : Replace the fuse, and recheck. If the fuse blows again, check for a short in the No. B22 (7.5 A) fuse circuit.

2. Open wire check (IG2 A/C line):
   - 1. Disconnect the following connector.

     Climate control unit 32P connector

   - 2. Turn the ignition switch to ON (II).
   - 3. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     Climate control unit 32P connector: disconnected

     Test circuit IG2 A/C

     Test point 1 Climate control unit 32P connector No. 12 (PNK)

     Test point 2 Body ground

Fig. 95: Measuring Voltage Between Test Points 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The IG2 A/C wire is OK. Go to step 3.

NO : Repair an open in the wire between the No. B22 (7.5 A) fuse in the under-dash fuse/relay box and the climate control unit.

3. Open wire check (GND line):

GETtheMANUALS.org

- 1. Turn the ignition switch to LOCK (0).
- 2. Check for continuity between test points 1 and 2.

Test condition IG LOCK (0)

Climate control unit 32P connector: disconnected

Test circuit GND

Test point 1 Climate control unit 32P connector No. 25 (BRN)

Test point 2 Body ground

Fig. 96: Checking For Continuity Between Test Points 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The GND wire is OK. **REPLACE THE CLIMATE CONTROL UNIT** .

NO : Check for an open in the wire between the climate control unit and body ground. If the wire is OK, check for poor ground at G502.

DRIVER'S AIR MIX CONTROL MOTOR TEST

SPECIAL TOOL DESCRIPTION

Image	Description/Tool Number
	Backprobe Set 07SAZ-001000A (2)

GETtheMANUALS.org

TEST

NOTE: Before testing the motor, check for climate control DTCs.

1. Driver's Air Mix Control Motor - Test
    1. Disconnect the driver's air mix control motor connector.

NOTE: Incorrectly applying power and ground to the driver's air mix control motor will damage it. Follow the instructions carefully.

Fig. 97: Identifying Driver's Air Mix Control Motor Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Connect battery power to terminal No. 7 of the driver's air mix control motor, and ground terminal No. 6; the driver's air mix control motor should run smoothly, and stop at MAX HOT. If it does not, reverse the connections; the driver's air mix control motor should run smoothly, and stop at MAX COOL. When the driver's air mix control motor stops running, disconnect battery power immediately.
3. If the driver's air mix control motor did not run in step 2, remove it, then check the driver's air mix control linkage and door for smooth movement.
    - If the linkage and door move smoothly, go to step 4.
    - If the linkage or door sticks or binds, repair them as needed.
4. Measure the resistance between terminals No. 1 and No. 3. It should be between 4.2 kohms and 7.8

GETtheMANUALS.org

kohms.

5. Reconnect the driver's air mix control motor connector.
6. Turn the ignition switch to ON (II).
7. Using the backprobe set, measure the voltage between terminals No. 1 and No. 2.

   MAX COOL: About 0.5 V

   MAX HOT: About 4.0 V

8. If either the resistance or the voltage readings are not as specified, replace the driver's air mix control motor.

HUMIDITY/IN-CAR TEMPERATURE SENSOR TEST

TEST

NOTE: Before testing the sensor, check for climate control DTCs.

1. Humidity Sensor - Test

   NOTE: The climate control unit receives humidity (%) data via digital transmission.

   1. Turn the ignition switch to LOCK (0).
   2. Press and hold both the AUTO (A) and RECIRCULATION (B) buttons, then start the engine.
   3. After the engine starts, release both buttons. The climate control unit will flash the sensor number and then the value for that sensor.
   4. Press the REAR WINDOW DEFOGGER button (C) until the humidity "C" is displayed. For details about the displayed content.
   5. If the value is far from the actual humidity, replace the humidity/in-car temperature sensor.

Fig. 98: Identifying Auto, Recirculation And Rear Window Defogger Buttons
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

2. In-Car Temperature Sensor - Test

NOTE: The climate control unit receives in-car temperature (° C) data via digital transmission.

1. Turn the ignition switch to LOCK (0).
2. Press and hold both the AUTO (A) and RECIRCULATION (B) buttons, then start the engine.
3. After the engine starts, release both buttons. The climate control unit will flash the sensor number and then the value for that sensor.
4. Press the REAR WINDOW DEFOGGER button (C) until the in-car temperature "2" is displayed. For details about the displayed content.
5. If the value is far from the actual in-car temperature, replace the humidity/in-car temperature sensor.

Fig. 99: Identifying Auto, Recirculation And Rear Window Defogger Buttons

MODE CONTROL MOTOR TEST

SPECIAL TOOL DESCRIPTION

Image	Description/Tool Number

GETtheMANUALS.org

	Backprobe Set 07SAZ-001000A (2)

REMOVAL

1. Glove Box - Move
    1. Detach the glove box damper hook (A), and release both glove box stops (B) by pushing them in, then let glove box (C) hang down.

Fig. 104: Pushing Glove Box Stops
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TEST

NOTE: Before testing the motor, check for HVAC DTCs or climate control DTCs.

1. Mode Control Motor - Test
    1. Disconnect the mode control motor connector.

NOTE: Incorrectly applying power and ground to the mode control motor will damage it. Follow the instructions carefully.

GETtheMANUALS.org

Fig. 105: Identifying Mode Control Motor Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Connect battery power to terminal No. 6 of the mode control motor, and ground terminal No. 7; the mode control motor should run smoothly, and stop at DEFROST. If it does not, reverse the connections; the mode control motor should run smoothly, and stop at VENT. When the mode control motor stops running, disconnect battery power immediately.
3. If the mode control motor did not run in step 2, remove it, then check the mode control linkage and door for smooth movement.
   - If the linkage and door move smoothly, go to step 4.
   - If the linkage or door sticks or binds, repair them as needed.
4. Measure the resistance between terminals No. 1 and No. 3. It should be between 4.2 kohms and 7.8 kohms.
5. Reconnect the mode control motor connector.
6. Turn the ignition switch to ON (II).
7. Using the backprobe set, measure the voltage between terminals No. 2 and No. 3.

   VENT: About 0.5 V

   DEFROST: About 4.5 V

8. If either the resistance or the voltage readings are not as specified, replace the mode control motor.

INSTALLATION

1. Glove Box - Move
   1. Install the glove box (A). Make sure the glove box stops (B) snap into place securely.
   2. Install the glove box damper hook (C).

GETtheMANUALS.org

OUTSIDE AIR TEMPERATURE INDICATOR CALIBRATION

PROCEDURE

NOTE: To test the outside air temperature sensor, refer to the outside air temperature sensor test procedure.

1. Outside Air Temperature Indicator - Calibration

   Description

   The outside air temperature sensor is located behind the center of the front bumper. The gauge control module uses measurements from this sensor, plus analog with data provided by the climate control unit via the B-CAN communication line, to display the outside air temperature. Because of the location of the sensor, it may be affected by heat reflection from the road, engine and radiator or hot exhaust from surrounding traffic.

   These conditions can soak the outside air temperature sensor in heat and cause inaccurate readings. Logic has been written into the gauge control module to help prevent abnormal or fluctuating outside air temperature indicator readings.

   Outside Air Temperature Indicator Logic

   Initial outside air temperature is indicated after the ignition switch is turned ON (II):

   - Engine coolant temperature is 140 °F (60 °C) or higher:

     If the engine coolant temperature is 140 °F (60 °C) or higher when the ignition switch is turned ON

GETtheMANUALS.org

(II), the outside air temperature indicated the last time the key was turned off is displayed regardless of the current temperature measured by the outside air temperature sensor.

- Engine coolant temperature is 138 °F (59 °C) or lower:

  If the engine coolant temperature is 138 °F (59 °C) or lower when the ignition switch is turned ON (II), the current temperature measured by the outside air temperature sensor is indicated.

Information Update to the Outside Air Temperature Indicator While Driving

- Engine coolant temperature is 140 °F (60 °C) or higher:

  If the temperature measured by the outside air temperature sensor is greater than the temperature on the outside air temperature indicator, the outside air temperature indicator increases by 1 °F (1 °C) per minute after vehicle speed is greater than 19 mph (30 km/h) for more than 33 seconds (one minute). It continues to increase until the current outside air temperature is indicated. So, the first change to the outside air temperature indicator is 33 seconds (one minute) after vehicle speed is greater than 19 mph (30 km/h). If the vehicle speed drops below 19 mph (30 km/h), the indicator does not update again until the vehicle speed has increased to 19 mph (30 km/h) or more for more than 33 seconds (one minute) again.

- Engine coolant temperature is 138 °F (59 °C) or lower:

  If the outside air temperature is less than the indicated temperature, the temperature decreases 1 °F (1 °C) every 2 seconds until the current outside air temperature is indicated regardless of vehicle speed.

Troubleshooting

If the indicator displays - - - °F for more than 2 seconds after selecting the outside air temperature display mode, the gauge control module is not receiving outside temperature data from the climate control unit via the B-CAN. Check for and resolve all B-CAN related DTCs, then check the climate control system or multiplex integrated control system for DTCs. (see B-CAN System Diagnosis Test Mode A)

Fahrenheit:

Fig. 107: Indicator Displays Temperature In Fahrenheit
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Celsius:

GETtheMANUALS.org

Fig. 108: Indicator Displays Temperature In Celsius
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Calibration

NOTE: The outside air temperature indicator's displayed temperature can be recalibrated 5 °F (3 °C) to meet the customer's expectations.

1. Turn the ignition switch to ON (II).
2. Select the odometer/trip A or odometer/trip B display.
3. Select the outside air temperature display and press and hold the SELECT/RESET knob for 10 seconds. While you continue to hold the button, the display will scroll through temperature setting from +5 °F (+3 °C) to -5 °F (-3 °C) as shown.

   Fahrenheit:

Fig. 109: Display Outside Air Temperature In Fahrenheit
Courtesy of AMERICAN HONDA MOTOR CO., INC.

   Celsius:

Fig. 110: Display Outside Air Temperature In Celsius
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. When the desired correction value appears on the display, release the button, and the recalibrated outside air temperature will be displayed.

   NOTE: The recalibration temperature is not the value the sensor detects. Therefore the temperature can only be adjusted 5 °F (3 °C) from sensors reading.

   Example:

   Incorrect value = 68 °F (20 °C)

GETtheMANUALS.org

Desired correction value = +2 °F (+1 °C)

Correct value = 70 °F (21 °C)

Desired correction value = -2 °F (-1 °C)

Correct value = 66 °F (19 °C)

NOTE: **To recalibrate the display to the true temperature, remove the outside air temperature sensor (A), but leave it connected. Submerge the sensor and a thermometer (B) in a container of ice water (C). Select the calibration mode as described above, then recalibrate the display to the true temperature.**

TEST

NOTE: Before testing the motor, check for climate control DTCs.

1. Passenger's Air Mix Control Motor - Test
    1. Disconnect the passenger's air mix control motor connector.

NOTE: Incorrectly applying power and ground to the passenger's air mix control motor will damage it. Follow the instructions carefully.

Fig. 118: Identifying Passenger's Air Mix Control Motor Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Connect battery power to terminal No. 6 of the passenger's air mix control motor, and ground terminal No. 7; the passenger's air mix control motor should run smoothly, and stop at MAX HOT.

GETtheMANUALS.org

If it does not, reverse the connections; the passenger's air mix control motor should run smoothly, and stop at MAX COOL. When the passenger's air mix control motor stops running, disconnect battery power immediately.

3. If the passenger's air mix control motor did not run in step 2, remove it, then check the passenger's air mix control linkage and door for smooth movement.
   - If the linkage and door move smoothly, go to step 4.
   - If the linkage or door sticks or binds, repair them as needed.
4. Measure the resistance between terminals No. 1 and No. 3. It should be between 4.2 kohms and 7.8 kohms.
5. Reconnect the passenger's air mix control motor connector.
6. Turn the ignition switch to ON (II).
7. Using the backprobe set, measure the voltage between terminals No. 2 and No. 3.

   MAX COOL: About 1.0 V

   MAX HOT: About 4.0 V

8. If either the resistance or the voltage readings are not as specified, replace the passenger's air mix control motor.

INSTALLATION

1. Passenger's Heater Duct
   1. Install the passenger's heater duct (A).

Fig. 119: Identifying Passenger's Heater Duct
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

2. Glove Box Frame
    1. Install the glove box frame (A).

Fig. 120: Identifying Glove Box Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Glove Box
    1. Install the glove box (A), then install the glove box damper hook (B).

Fig. 121: Installing Glove Box
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Install the bolts (A).

GETtheMANUALS.org

Fig. 122: Identifying Glove Box Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Passenger's Dashboard Undercover
    1. Install the passenger's dashboard undercover (A). Make sure the clips (B) snap into place securely, and the pins (C) into the holder (D) securely.

FUEL AND EMISSIONS SYSTEMS .

1. Fuse check:
   - 1. Check the following fuse.

     Fuse No. A2-11 (20 A)

     Location Under-hood fuse/relay box

   Is the fuse OK?

   YES : Go to step 2.

   NO : Replace the fuse, and recheck. If the fuse blows again, check for a short in the No. A2-11 (20 A) fuse circuit.

2. Radiator fan relay check:
   - 1. Remove the radiator fan relay from the under-hood fuse/relay box, and **TEST IT** .

   Is the relay OK?

   YES : Go to step 3.

   NO : Replace the radiator fan relay.

3. A/C signal output check:
   - 1. Connect the HDS to the DLC.
   - 2. Turn the ignition switch to ON (II). Make sure the A/C system is OFF, then start the engine.
   - 3. Press the fan control button ON, then momentarily turn ON the A/C with the A/C button.

     NOTE: Do not run the A/C for more than a few seconds with the engine running or damage to the A/C system will result.

   - 4. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
FAN LOW CTRL	ON			

   Is the FAN LOW CTRL on with the A/C on?

   YES : Go to step 4.

   NO : **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND**

GETtheMANUALS.org

INSTALLATION or **PCM UPDATE** , and recheck.

4. Open wire check (+B MAIN FAN line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Measure the voltage between test points 1 and 2.

     Test condition IG LOCK (0)

     Radiator fan relay: disconnected

     Test circuit +B MAIN FAN

     Test point 1 Radiator fan relay 4P socket No. 1 (PUR) (Built into the under-hood fuse/relay box)

     Test point 2 Body ground

Fig. 126: Measuring Voltage Between Test Points 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The +B MAIN FAN wire is OK. Go to step 5.

NO : An open in the +B MAIN FAN wire. **REPLACE THE UNDER-HOOD FUSE/RELAY BOX** .

5. Determine possible failure area (radiator fan relay switch side circuit, radiator fan relay coil side circuit):
   - 1. Connect terminals A and B with a jumper wire.

     Terminal A Radiator fan relay 4P socket No. 1 (PUR) (Built into the under-hood fuse/relay box)

     Terminal B Radiator fan relay 4P socket No. 2 (PNK) (Built into the under-hood fuse/relay box)

GETtheMANUALS.org

Fig. 127: Connecting Terminals A And B With Jumper Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Do the A/C condenser and radiator fans run on low?

YES : Go to step 6.

NO : Go to step 8.

6. Radiator fan relay coil side power circuit check:
   - 1. Disconnect the jumper wire.
   - 2. Turn the ignition switch to ON (II).
   - 3. Measure the voltage between test points 1 and 2.

   Test condition IG ON (II)

   Radiator fan relay: disconnected

   Test circuit MAIN FAN DIODE-

   Test point 1 Radiator fan relay 4P socket No. 8 (LT BLU) (Built into the under-hood fuse/relay box)

   Test point 2 Body ground

GETtheMANUALS.org

Fig. 128: Measuring Voltage Between Test Points 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : Go to step 7.

NO : Go to step 13.

7. Open wire check (FAN LO SIGNAL line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Reinstall the radiator fan relay.
   - 3. Jump the SCS line with the HDS.

NOTE: **This step must be done to protect the PCM from damage.**

   - 4. Disconnect the following connector.

     PCM connector A (49P)

   - 5. Connect terminals A and B with a jumper wire.

     Terminal A PCM connector A (49P) No. 15 (PUR)

     Terminal B Body ground

GETtheMANUALS.org

Fig. 129: Connecting Terminals A And B With Jumper Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 6. Turn the ignition switch to ON (II).

Do the A/C condenser and radiator fans run on low?

YES : **Update the PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** if it does not have the latest software, or **substitute a known-good PCM** See **PCM REMOVAL AND INSTALLATION** or **PCM UPDATE** , and recheck.

NO : Repair an open in the wire between the radiator fan relay and the PCM.

8. Open wire check (MAIN FAN MOTOR line):
   - 1. Disconnect the jumper wire.
   - 2. Reinstall the radiator fan relay.
   - 3. Disconnect the following connector.

     Radiator fan motor 2P connector

   - 4. Turn the ignition switch to ON (II). Make sure the A/C system is OFF, then start the engine.
   - 5. Press the fan control button ON, then momentarily turn ON the A/C with the A/C button.

     NOTE: Do not run the A/C for more than a few seconds with the engine running or damage to the A/C system will result.

   - 6. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     Radiator fan motor 2P connector: disconnected

     Test circuit MAIN FAN MOTOR

GETtheMANUALS.org

Test point 1 Radiator fan motor 2P connector No. 1 (PNK)

Test point 2 Body ground

Fig. 130: Measuring Voltage Between Test Points 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage with the A/C on?

YES : The MAIN FAN MOTOR wire is OK. Go to step 9.

NO : Repair an open in the wire between the radiator fan relay and the radiator fan motor.

9. Radiator and A/C condenser fan motors test:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. TEST THE RADIATOR AND THE A/C CONDENSER FAN MOTORS .

Are the radiator and A/C condenser fan motors OK?

YES : Go to step 10.

NO : Replace the RADIATOR FAN MOTOR and/or the **A/C CONDENSER FAN MOTOR** .

10. Fan control relay check:
    - 1. Remove the fan control relay from the under-hood fuse/relay box, and **TEST IT** .

Is the relay OK?

YES : Go to step 11.

NO : Replace the fan control relay.

11. Open wire check (FAN HI/LO RLY COM line):
    - 1. Reconnect the radiator fan motor 2P connector.
    - 2. Turn the ignition switch to ON (II). Make sure the A/C system is OFF, then start the engine.
    - 3. Turn the fan control button ON, then momentarily turn ON the A/C with the A/C button.

GETtheMANUALS.org

NOTE: **Do not run the A/C for more than a few seconds with the engine running or damage to the A/C system will result.**

- 4. Measure the voltage between test points 1 and 2.

  Test condition IG ON (II)

  Fan control relay: disconnected

  Test circuit FAN HI/LO RLY COM

  Test point 1 Fan control relay 5P socket No. 4 (LT GRN) (Built into the under-hood fuse/relay box)

  Test point 2 Body ground

Fig. 131: Measuring Voltage Between Test Points 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage with the A/C on?

YES : The FAN HI/LO RLY COM wire is OK. Go to step 12.

NO : Repair an open in the wire between the radiator fan motor and the fan control relay.

12. Open wire check (SUB FAN MOTOR line):
    - 1. Then turn the ignition switch to LOCK (0).
    - 2. Disconnect the following connector.

      A/C condenser fan motor 2P connector

    - 3. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

GETtheMANUALS.org

Fan control relay: disconnected

A/C condenser fan motor 2P connector: disconnected

Test circuit SUB FAN MOTOR

Test point 1 Fan control relay 5P socket No. 6 (YEL) (Built into the under-hood fuse/relay box)

Test point 2 A/C condenser fan motor 2P connector No. 1 (YEL)

Fig. 132: Checking For Continuity Between Test Points 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Check for an open in the wire between the A/C condenser fan motor and body ground. If the wire is OK, check for poor ground at G302.

NO : Repair an open in the wire between the fan control relay and the A/C condenser fan motor.

13. A/C diode B check:
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Remove A/C diode B from the under-hood fuse/relay box.
    - 3. Using the diode setting ( ) on a DVOM, check for current flow in both directions between A/C diode B terminals No. 1 and No. 2.

GETtheMANUALS.org

Fig. 133: Identifying A/C Diode B
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there current flow in only one direction?

YES : Go to step 14.

NO : Replace the A/C diode B.

14. Open wire check (IG2 A/C line):
    - 1. Turn the ignition switch to ON (II).
    - 2. Measure the voltage between test points 1 and 2.

    Test condition IG ON (II)

    Radiator fan relay: disconnected

    A/C diode B: disconnected

    Test circuit IG2 A/C

    Test point 1 A/C diode B 2P socket No. 2 (PNK)

    Test point 2 Body ground

GETtheMANUALS.org

Fig. 134: Measuring Voltage Between Test Points 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The IG2 A/C wire is OK. **REPLACE THE UNDER-HOOD FUSE/RELAY BOX** .

NO : Repair an open in the wire between the No. B22 (7.5 A) fuse in the under-dash fuse/relay box and the A/C diode B.

RECIRCULATION CONTROL MOTOR TEST

SPECIAL TOOL DESCRIPTION

Image	Description/Tool Number
	Backprobe Set 07SAZ-001000A (2)

REMOVAL

1. Glove Box - Move
    1. Detach the glove box damper hook (A), and release both glove box stops (B) by pushing them in, then let glove box (C) hang down.

GETtheMANUALS.org

Fig. 146: Pushing Glove Box Stops
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TEST

NOTE: Before testing the motor, check for HVAC DTCs or climate control DTCs.

1. Recirculation Control Motor - Test
    1. Disconnect the recirculation control motor connector.

NOTE: Incorrectly applying power and ground to the recirculation control motor will damage it. Follow the instructions carefully.

Fig. 147: Identifying Recirculation Control Motor Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Connect battery power to terminal No. 6 of the recirculation control motor, and ground terminal No. 7; the recirculation control motor should run smoothly, and stop at FRESH. If it does not, reverse the connections; the recirculation control motor should run smoothly, and stop at RECIRCULATE. When the recirculation control motor stops running, disconnect battery power immediately.
3. If the recirculation control motor did not run in step 2, remove it, then check the recirculation control linkage and door for smooth movement.
    - If the linkage and door move smoothly, go to step 4.
    - If the linkage or door sticks or binds, repair them as needed.
4. Measure the resistance between terminals No. 1 and No. 3. It should be between 4.2 kohms and 7.8 kohms.
5. Reconnect the recirculation control motor connector.
6. Turn the ignition switch to ON (II).
7. Using the backprobe set, measure the voltage between terminals No. 1 and No. 2.

RECIRCULATE: About 2.8 V

FRESH: About 0.5 V

GETtheMANUALS.org

8. If either the resistance or voltage readings are not as specified, replace the recirculation control motor.

INSTALLATION

1. Glove Box - Move
    1. Install the glove box (A). Make sure the glove box stops (B) snap into place securely.
    2. Install the glove box damper hook (C).

Fig. 148: Identifying Glove Box, Stops And Damper Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

SUNLIGHT SENSOR TEST

TEST

NOTE:

- **When prying with a flat-tip screwdriver, wrap it with protective tape to prevent damage.**
- **Before testing the sensor, check for climate control DTCs.**

1. Sunlight Sensor - Test
    1. Remove the sunlight sensor (A) with connector connected.
    2. Turn the ignition switch to ON (II).
    3. Measure the voltage between (+) probe on terminal No. 2 and (-) probe on terminal No. 3 with the connector connected.

NOTE: **The voltage readings will not change under the light of a flashlight or a fluorescent lamp.**

GETtheMANUALS.org

Voltage should be:

- 3.56 V with no sunlight or sensor covered up
- Less than 3.56 V with sunlight on sensor (depending on sunlight intensity)

4. If the voltage is not as specified, replace the sunlight sensor.

Fig. 149: Identifying Sunlight Sensor And Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

A/C SYSTEM TEST RESULT (CLIMATE CONTROL)

Test Results	Related Symptoms	Probable Cause
Driver's and passenger's side A/C vent temperatures may vary by approximately 20° F (11°C) or more	Suction pressure may be low	• Low refrigerant charge • Expansion valve not opening sufficiently
	Driver's or passenger's air mix door DTCs present	One air mix door stuck or inoperative
Discharge pressure abnormally High	Discharge pressure reduced when A/C condenser cooled with water spray	Significant refrigerant overcharge
	• Restricted/weak airflow through A/C condenser • With doors open, fresh air selected, and radiator and A/C condenser fans run on high speed, temperature drop across A/C condenser inlet to outlet is less than about 41 °F (5 °C) while A/C	• Dirty A/C condenser or damaged fins • Debris between A/C condenser and radiator • Radiator and/or A/C condenser fan(s)

GETtheMANUALS.org

	compressor is running	malfunctioning
Discharge pressure abnormally Low	• Suction and discharge pressures equalize rapidly after stopping A/C compressor • Suction pressure higher than normal	Faulty A/C compressor discharge valve or seal
Suction pressure abnormally Low	Weak or insufficient airflow across evaporator	Restricted blower intake or dust and pollen filter
	Suction pressure varies from near normal to a vacuum, as moisture freezes in expansion valve orifice	• Moisture in the system • Faulty expansion valve
	• Reduced airflow from vents • Vent temperature is very low	• Evaporator freezing • Faulty evaporator temperature sensor (check DTC) • Faulty expansion valve or A/C compressor clutch relay stuck in the on position
Suction pressure abnormally High	• Lack of slight suction pressure variation at 1, 00 rpm when "Recirculated" airflow is switched to "Fresh Air" • Discharge pressure near normal	Expansion valve stuck open or open too long
Suction and Discharge pressures abnormally High	• A sheet of paper does not stick to front of A/C condenser surface with cooling fans on • With doors open, fresh air selected and radiator and A/C condenser fan run on high speed, temperature drop across A/C condenser inlet to outlet is less than about 41 °F (5 °C)	Radiator and/or A/C condenser fan motor(s) inoperative or wires reversed
	• A/C compressor clutch remains engaged during off cycle • A/C compressor relief valve may open	• Insufficient A/C compressor clutch clearance • A/C compressor clutch relay stuck in the on position or circuit problem • Excessive air in system
	Suction line from expansion valve to A/C compressor is not cold	Excessively low refrigerant charge
	Lack of slight suction pressure variation at 1, 00 rpm when "Recirculated" airflow is switched to "Fresh Air"	Expansion valve clogged with debris/desiccant, stuck closed, or not opening sufficiently
		Blocked or restricted A/C

GETtheMANUALS.org

Suction and Discharge pressures abnormally Low	More than 50 - 60 °F (10 - 16 °C) temperature drop across A/C condenser inlet to outlet pipes	condenser internal passages or lines/components restricting refrigerant flow
	Significant temperature difference along high or low side A/C lines or components **NOTE:** **Some restrictions may not show up until 3, 00 rpm**	Restriction in A/C suction or discharge lines or components (check temperatures to isolate)
Suction pressure High and Discharge pressure Low	• Excessive A/C compressor noise • Pressures equalize quickly and noise after A/C compressor turns off	A/C compressor internal damage (Check for A/C system debris contamination)
Suction and discharge pressures slightly low	Vent temperature too high	• Slightly low refrigerant charge • Air mix door sticking, misadjusted or inoperative • Excessive refrigerant oil in system
	Static pressures high with A/C system equalized. (After engine is off 4 - 12 hours)	• Air/Non-condensable gasses in system • Contaminated or incorrect refrigerant

A/C SYSTEM TEST RESULT (MANUAL A/C)

Test Results	Related Symptoms	Probable Cause
Driver's and passenger's side A/C vent temperatures may vary by approximately 20° F (11°C) or more	Suction pressure may be low	• Low refrigerant charge • Expansion valve not opening sufficiently
	Air mix door DTCs present	Air mix door stuck or inoperative
Discharge pressure abnormally High	Discharge pressure reduced when A/C condenser cooled with water spray	Significant refrigerant overcharge
	• Restricted/weak airflow through A/C condenser • With doors open, fresh air selected, and radiator and A/C condenser fans run on high speed, temperature drop across A/C condenser inlet to outlet is less than about 41 °F (5 °C) while A/C compressor is running	• Dirty A/C condenser or damaged fins • Debris between A/C condenser and radiator • Radiator and/or A/C condenser fan(s) malfunctioning

IGNITION KEY LIGHT TEST

REMOVAL

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

1. Upper Column Cover
    1. Carefully pry out the dashboard meter visor blind cover (A) with the appropriate trim tool to detach the clips (B) and the hook (C), then tuck up the dashboard meter visor blind cover.

Fig. 1: Removing Dashboard Meter Visor Blind Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Detach the hooks (A), then remove the upper column cover (B).

GETtheMANUALS.org

Fig. 2: Identifying Upper Column Cover And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Lower Column Cover
    1. Turn the steering wheel to the left. Remove the screw (A) securing the lower column cover (B) from the front side.
    2. Turn the steering wheel to the right. Remove the screw securing the lower column cover from the front side.

Fig. 3: Turning Steering Wheel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the screw (A), then remove the lower column cover (B).

GETtheMANUALS.org

Fig. 4: Identifying Lower Column Cover And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TEST

1. Ignition Key Light - Test
    1. Disconnect the connector.
    2. The LED should come on when power is connected to terminal No. 3 and ground is connected to terminal No. 2.
    3. If the LED does not come on, replace the steering lock assembly.
    4. Connect the connector.

GETtheMANUALS.org

NOTE:

- **SRS COMPONENTS ARE LOCATED IN THIS AREA. REVIEW THE SRS**

GETtheMANUALS.org

COMPONENT LOCATIONS , and PRECAUTIONS AND PROCEDURES before doing repairs or servicing.

- **Refer to the Electrical Wiring Diagrams for the location of the under-dash fuse/relay box connectors.**

1. DTC check:
   - 1. Check the A/T system DTCs with the HDS.

DTC Description	Confirmed DTC	Pending DTC

Are DTCs indicated?

YES : Go to DTC troubleshooting.

NO : Go to step 2.

2. Key interlock system check:
   - 1. Check the A/T system DATA LIST with the HDS.

Signal	Current conditions	
	Values	Unit
ATP-P Switch		
Park Pin Switch		

Are the ATP-P and Park Pin Switch indicating when the shift lever is in P, and does the transmission range switch indicate OFF when the shift lever is shifted to any position other than P?

YES : Go to step 3.

NO : ATP-P switch troubleshooting 10.

NO : Park pin switch troubleshooting 7.

3. Determine possible failure area (steering lock, others):
   - 1. Move the shift lever to P and set the parking brake.
   - 2. Remove the steering column covers.
   - 3. Disconnect the following connector.

     Steering lock 7P connector

   - 4. Turn the ignition switch to ACCESSORY (I).
   - 5. Check if the ignition switch can be turned to LOCK (0).

GETtheMANUALS.org

Can the ignition switch be turned to LOCK (0)?

YES : Go to step 4.

NO : Faulty key interlock solenoid; **REPLACE THE STEERING LOCK** .

4. Fuse check:
   - 1. Check the following fuse.

     Fuse No. B20 (7.5 A)

     Location Under-dash fuse/relay box

Is the fuse OK?

YES : Go to step 5.

NO : Replace the fuse. If the fuse blows again, repair a short to ground in the No. B20 (7.5 A) fuse circuit.

5. Shorted wire check (KEY SOL line):
   - 1. Make sure the ignition switch is turned to LOCK (0).
   - 2. Disconnect the following connector.

     Under-dash fuse/relay box connector P (20P)

   - 3. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Steering lock 7P connector: disconnected

     Under-dash fuse/relay box connector P (20P): disconnected

     Test circuit KEY SOL

     Test point 1 Steering lock 7P connector No. 4 (PUR)

     Test point 2 Body ground

GETtheMANUALS.org

Fig. 58: Checking Continuity Between Steering Lock 7P Connector No. 4 (PUR) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to body ground in the wire.

NO : The KEY SOL wire is OK. Go to step 6.

6. Open wire check (KEY SOL line):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Steering lock 7P connector: disconnected

     Under-dash fuse/relay box connector P (20P): disconnected

     Test circuit KEY SOL

     Test point 1 Under-dash fuse/relay box connector P (20P) No. 10 (PUR)

     Test point 2 Steering lock 7P connector No. 4 (PUR)

GETtheMANUALS.org

Fig. 59: Checking Continuity Between Under-Dash Fuse/Relay Box Connector P (20P) No. 10 (PUR) And Steering Lock 7P Connector No. 4 (PUR)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The KEY SOL wire is OK. Go to step 7.

NO : Repair an open or high resistance in the wire.

7. Park pin switch check:
   - 1. Remove the center console.
   - 2. Disconnect the following connectors.

     Select lever 12P connector

   - 3. **DO THE PARK PIN SWITCH TEST** .

Is switch OK?

YES : Go to step 8.

NO : **REPLACE THE PARK PIN SWITCH** .

8. Shorted wire check (P-PIN SW line):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Steering lock 7P connector: disconnected

     Under-dash fuse/relay box connector P (20P): disconnected

GETtheMANUALS.org

Select lever 12P connector: disconnected

Test circuit P-PIN SW

Test point 1 Select lever 12P connector No. 6 (LT BLU)

Test point 2 Body ground

Fig. 60: Checking Continuity Between Select Lever 12P Connector No. 6 (LT BLU) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to body ground in the wire.

NO : The P-PIN SW wire is OK. Go to step 9.

9. Open wire check (GND line) 1:
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Steering lock 7P connector: disconnected

     Under-dash fuse/relay box connector P (20P): disconnected

     Select lever 12P connector: disconnected

     Test circuit GND

     Test point 1 Select lever 12P connector No. 5 (BLK)

     Test point 2 Body ground

GETtheMANUALS.org

Fig. 61: Checking Continuity Between Select Lever 12P Connector No. 5 (BLK) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The GND wire is OK. Go to step 10.

NO : Repair an open or high resistance in the wire.

10. Transmission range switch check:
    - 1. **DO THE TRANSMISSION RANGE SWITCH TEST** .

Is switch OK?

YES : Go to step 11.

NO : **REPLACE THE TRANSMISSION RANGE SWITCH** .

11. Open wire check (ATP-P line):
    - 1. Disconnect the following connectors.

      Under-dash fuse/relay box connector D (32P)

      Transmission range switch 10P connector

    - 2. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      Steering lock 7P connector: disconnected

      Under-dash fuse/relay box connector P (20P): disconnected

      Select lever 12P connector: disconnected

GETtheMANUALS.org

Under-dash fuse/relay box connector D (32P): disconnected

Transmission range switch 10P connector: disconnected

Test circuit ATP-P

Test point 1 Under-dash fuse/relay box connector D (32P) No. 22 (YEL)

Test point 2 Transmission range switch 10P connector No. 10 (BLK/BLU)

Fig. 62: Checking Continuity Between Under-Dash Fuse/Relay Box Connector D (32P) No. 22 (YEL) And Transmission Range Switch 10P Connector No. 10 (BLK/BLU)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The ATP-P wire is OK. Go to step 12.

NO : Repair an open or high resistance in the wire.

12. Open wire check (GND line) 2:
    - 1. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      Steering lock 7P connector: disconnected

      Under-dash fuse/relay box connector P (20P): disconnected

      Select lever 12P connector: disconnected

GETtheMANUALS.org

Under-dash fuse/relay box connector D (32P): disconnected

Transmission range switch 10P connector: disconnected

Test circuit GND

Test point 1 Transmission range switch 10P connector No. 6 (BLK)

Test point 2 Body ground

Fig. 63: Checking Continuity Between Transmission Range Switch 10P Connector No. 6 (BLK) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The GND wire is OK. Faulty MICU; **REPLACE THE UNDER-DASH FUSE/RELAY BOX** .

NO : Repair an open or high resistance in the wire.

GETtheMANUALS.org

IMMOBILIZER SYSTEM SYMPTOM TROUBLESHOOTING INFORMATION

GENERAL CHECK BEFORE TROUBLESHOOTING

Before troubleshooting the immobilizer system, check the following general items and resolve any issues, if applicable:

- The battery is low; charge the battery fully, then troubleshoot the immobilizer system.
- The ignition key is not a genuine Honda part; use a Honda-approved key blank, register the key, then troubleshoot the immobilizer system.
- If a key ring or a key case is used; remove the key from it, and troubleshoot the immobilizer system with the key only.
- An aftermarket electrical part is installed; remove it, then troubleshoot the immobilizer system.

SYMPTOM TROUBLESHOOTING USING THE IMMOBILIZER INDICATOR LIGHTING PATTERN

The pattern of the immobilizer indicator can help troubleshoot the condition of the immobilizer system. Here are descriptions of the four possible patterns:

Normal operation

If the immobilizer code is identified, the immobilizer indicator quickly flashes once when the ignition switch is turned to ON (II).

The immobilizer indicator does not come on when the ignition switch is turned to LOCK (0).

Immobilizer code is not identified

If the immobilizer code is not identified, the immobilizer indicator will quickly flash once, then will blink until the ignition switch is turned to LOCK (0). When the ignition switch is turned to LOCK (0), the indicator will blink ten times, then go OFF to show the system is correctly reset.

The state of the immobilizer key registration and the S-NET line can be checked by **DOING A SYSTEM CHECK** with the HDS.

Immobilizer indicator does not come on

If the immobilizer indicator does not come on after turning the ignition switch to ON (II), there is an open or short in the F-CAN lines between the PCM and the gauge control module. Watch the malfunction indicator lamp (MIL). If the MIL stays on, **go to PGM-FI system troubleshooting** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .

GETtheMANUALS.org

Immobilizer indicator does not go off

If the immobilizer indicator does not go off after turning the ignition switch to ON (II), **DO THE GAUGE CONTROL MODULE SELF-DIAGNOSTIC FUNCTION** . If the indicator drive circuit is OK, **DO THE SYSTEM CHECK** and **STATUS LOG** with the HDS.

SYMPTOM TROUBLESHOOTING USING MALFUNCTIONING CIRCUIT FUNCTIONS

If a malfunction occurs in the immobilizer circuit, use the table to cross-reference the malfunction criteria to the line(s) that should be checked in the table:

Function / Line Error		Immobilizer Indicator	Engine Start	Key Registration	Tester Communication	Keyless Operation
Terminal No. (Wire Color)	**Cause of Malfunction**					
1 (BRM)	GND line open	Blinking	Impossible	Impossible	Impossible	Impossible
2 (YEL)	S-NET line open or short	Blinking	Impossible	Impossible	Impossible	Possible
3 (LT BLU)	K_LINE line open or short	Comes on, then goes off.	Possible	Impossible	Impossible	Possible
4 (PNK)	B_CAN-H line open or short	Comes on, then goes off.	Possible	Possible	Immobilizer: Possible Keyless: Impossible	Impossible
5 (BLU)	B_CAN-L line open or short	Comes on, then goes off.	Possible	Possible	Immobilizer: Possible Keyless: Impossible	Impossible
6 (BLU)	IG1_FUEL_PUMP line open or short	Blinking	Impossible	Impossible	Impossible	Possible
7 (RED)	+B_BACK_UP line open or short	Comes on, then goes off.	Possible	Impossible	Possible	Impossible

SYSTEM CHECK (CURRENT STATUS) AND STATUS LOG (HISTORY LOG IF THE IMMOBILIZER SYSTEM KEPT ENGINE FROM RUNNING)

NOTE: The HDS can be used to:

- **Check the state of the immobilizer key registration and the S-NET line by doing a SYSTEM CHECK.**
- **Check the number of times the immobilizer-keyless control unit did not permit the engine to run by checking the STATUS LOG.**

1. Connect the HDS to the data link connector (DLC), then turn the ignition switch to ON (II) and follow the

GETtheMANUALS.org

prompts to the SYSTEM SELECTION MENU.

NOTE: **If the HDS does not communicate with the vehicle, GO TO THE DLC CIRCUIT TROUBLESHOOTING .**

2. At SYSTEM SELECTION MENU, enter IMMOBI, then select the IMMOBILIZER SETUP.
3. **DO THE SYSTEM CHECK**. If there is a system check number, do the troubleshooting for the item indicated.
4. Check the STATUS LOG using the HDS. Troubleshoot the line with the highest counts first. If all the lines are 0 (zero), the problem may not be caused by the immobilizer system; check for ignition or fuel problems. Refer to PGM-FI System Symptom Troubleshooting.

NOTE: **Once repaired, clear the status log by removing the No. A29 (10 A) fuse in the under-hood fuse/relay box or disconnecting the battery.**

IMMOBILIZER SYSTEM SYMPTOM TROUBLESHOOTING INDEX

Troubleshoot the immobilizer system in the order shown:

Order of Priority	Symptom	Possible cause
1	Immobilizer indicator blinks.	**Immobilizer indicator blinks**.
2	Engine does not start with the immobilizer key.	**Engine does not start with the immobilizer key**.
3	Immobilizer indicator does not come on.	Check the MIL indication. If the MIL comes on, **GO TO PGM-FI SYSTEM MIL CIRCUIT TROUBLESHOOTING** .
4	Immobilizer indicator does not go off.	**Immobilizer indicator does not go off**.

IMMOBILIZER KEY REGISTRATION

PROCEDURE

1. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

GETtheMANUALS.org

Fig. 1: Identifying Data Link Connector (DLC)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Immobilizer Key Registration

NOTE:

- **The HDS is required for registration of the immobilizer keys.**
- **Programming the immobilizer also programs the keyless transmitter.**
- **Check for aftermarket electrical equipment that can cause problems with transponder operation.**
- **The immobilizer-keyless control unit can store up to six immobilizer keys.**

Add One New Key/Keyless Transmitter

1. Have a registered key, a new immobilizer key, and the first password from the iN system.
2. Select IMMOBI from the SYSTEM SELECTION MENU, then select IMMOBILIZER SETUP.
3. Select ADD AND DELETE KEYS, then ADD 1 KEY.
4. Do the registration according to the instructions on the HDS screen.
5. Check that the engine can be started with the newly registered key.
6. When prompted by the HDS, do the keyless transmitter programming.
7. Make sure the keyless transmitter operation works properly.

Add and Delete Key/Keyless Transmitter, Then Select Delete or Add Keys

1. Have a registered key, a new immobilizer key, and the first password from the iN system.
2. Select IMMOBI from the SYSTEM SELECTION MENU, then select IMMOBILIZER SETUP.
3. Select ADD AND DELETE KEYS, or DELETE OR ADD MULTIPLE KEYS.
4. Do the registration according to the instructions on the HDS screen.

GETtheMANUALS.org

5. Check that the engine can be started with the newly registered key.
6. When prompted by the HDS, do the keyless transmitter programming.
7. Make sure the keyless transmitter operation works properly.

All Keys are Lost

1. Prepare all new keys and have the immobilizer PCM code.
2. Select IMMOBI from the SYSTEM SELECTION MENU, then select IMMOBILIZER SETUP.
3. Select ADD AND DELETE KEYS, then ALL KEYS LOST.
4. Do the registration according to the instructions on the HDS screen.
5. Check that the engine can be started with the newly registered keys.
6. When prompted by the HDS, do the keyless transmitter programming.
7. Make sure the keyless transmitter operation works properly.

IMMOBILIZER SYSTEM CHECK

1. Connect the HDS to the data link connector (DLC).
2. Turn the ignition switch to ON (II).
3. Monitor the SYSTEM CHECK in IMMOBILIZER INFO with the HDS.

NOTE: If the HDS does not communicate with the immobilizer-keyless control unit, check the power, ground, and K-line connections.

4. If the HDS displays NORMAL N-1, the immobilizer system is OK at this time and you should refer to the STATUS LOG. If the HDS displays any messages, check as follows:

System Check No.	Status Log. Indication	System Check	Possible Cause
A-1	Possible	The key is not registered (Incorrect key code)	• This key is not registered in the immobilizer-keyless control unit. Try to register keys using the HDS. • No communication between the antenna and the immobilizer key because of interference from metal such as key chains/key rings/other keys. • Low battery voltage.
			• Intermittent interruption between transponder and immobilizer-keyless control unit. • The immobilizer key type is different. It is not for this vehicle but for another

GETtheMANUALS.org

A-2	Possible	Communication error between the key and immobilizer-keyless control unit (Incorrect key code format)	vehicle or for another company's vehicle. • Key failure (transponder failure) • No communication between the antenna and the immobilizer key because of interference from metal such as key chains/key rings/other keys. • Low battery voltage.
A-3	Possible	No communication between the key and immobilizer-keyless control unit (No transponder detected)	• The ignition switch was turned ON (II) with a non-immobilizer key. • The immobilizer key type is different. It is not for this vehicle but for another vehicle or for another company's vehicle. • Key failure (transponder failure) • No communication between the antenna and the immobilizer key because of interference from metal such as key chains/key rings/other keys. • Low battery voltage. • Immobilizer-keyless control unit failure
B-1	Possible	The PCM is not registered	• The PCM was not registered. Try to register the PCM using the HDS. • No communication between the PCM and the immobilizer-keyless control unit because of low battery voltage. • No communication between the immobilizer-keyless control unit and the PCM because of electrical interference. • Open in the IG1 line
B-2	Possible	Error of communication format in PCM (Incorrect registration format)	• The PCM was not registered. Try to register the PCM using the HDS. • No communication between the PCM and the immobilizer-keyless control unit because of low battery voltage. • No communication between the immobilizer-keyless control unit and the PCM because of electrical interference.
			• Imoes unit was not registered. • No communication between the imoes unit and the immobilizer-keyless control unit because of low battery voltage.

GETtheMANUALS.org

C-1	Possible	Imoes unit is not registered	• No communication between the imoes unit and the immobilizer-keyless control unit because of interference. • Try to register the imoes unit with the HDS.
C-2	Possible	Error of communication format in imoes unit	• Imoes unit was not registered. • No communication between the imoes unit and the immobilizer-keyless control unit because of low battery voltage. • No communication between the imoes unit and the immobilizer-keyless control unit because of electrical interference. • Try to register the imoes unit with the HDS.
D-1	Possible	S-NET line short	• S-NET line short from the PCM to the imoes unit or the immobilizer-keyless control unit. • No communication between the PCM and the immobilizer-keyless control unit because of low battery voltage. • No communication between the immobilizer-keyless control unit and the PCM because of electrical interference. • Immobilizer-keyless control unit failure • PCM failure
D-2	Possible	No communication between imoes unit and immobilizer-keyless control unit (S-NET line)	• Blown fuse • S-NET line open from the imoes unit to the immobilizer-keyless control unit. • No communication between the imoes unit and the immobilizer-keyless control unit because of low battery voltage. • No communication between the imoes unit and the immobilizer-keyless control unit because of electrical interference. • Immobilizer-keyless control unit failure • Imoes unit failure
D-3	Possible	No communication between PCM and immobilizer-keyless	• Blown fuse • S-NET line open from the PCM to the immobilizer-keyless control unit. • No communication between the PCM and the immobilizer-keyless control unit because of low battery voltage.

GETtheMANUALS.org

		control unit (S-NET line)	• No communication between the immobilizer-keyless control unit and the PCM because of electrical interference. • Immobilizer-keyless control unit failure • PCM failure
E-1	---------	Initial registration of immobilizer-keyless control unit is not completed	The immobilizer-keyless control unit is not registered. Try to register the immobilizer-keyless control unit using the HDS.
E-2			
E-3			
E-4			
E-5			
F-1	---------	Special Mode	Turn the ignition switch to ON (II) and to LOCK (0) with the registered key.

ENGINE DOES NOT START WITH THE IMMOBILIZER KEY

Fig. 5: Immobilizer System Symptom Troubleshooting Flow Chart (Engine Does Not Start With Immobilizer Key)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before troubleshooting, CHECK THE ITEMS LISTED IN GENERAL CHECK BEFORE TROUBLESHOOTING.**

GETtheMANUALS.org

1. Problem verification:
    - 1. Try to start the engine.

    Does the engine start?

    YES : Intermittent failure, the vehicle is OK at this time.

    NO : Go to step 2.

2. Immobilizer system check:
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Turn the ignition switch to ON (II), and check the immobilizer indicator.

    Does the indicator blink once, then stay off?

    YES : Go to step 3.

    NO : Go to the **Immobilizer indicator blinks**.

3. Starting system check:
    - 1. Turn the ignition switch to START (III).

    Does the starter motor run?

    YES : **Go to the PGM-FI System Symptom Troubleshooting** .

    NO : Go to Starting System, and See **Starter Overhaul** or **Starter Removal, Installation, and Performance Test** .

IMMOBILIZER INDICATOR BLINKS

GETtheMANUALS.org

Immobilizer System Symptom Troubleshooting / Immobilizer indicator blinks

Fig. 6: Immobilizer System Symptom Troubleshooting Flow Chart (Immobilizer Indicator Blinks)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: Before troubleshooting, check the items listed in General Check before Troubleshooting.

1. Immobilizer system check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Connect the HDS, then turn the ignition switch to ON (II).
   - 3. From the SYSTEM SELECTION MENU, enter IMMOBI, then select IMMOBILIZER SETUP.

     NOTE: If the HDS does not communicate with the immobilizer-keyless control unit, check the power, ground, and K-line connections.

   - 4. Select the SYSTEM CHECK from the IMMOBILIZER INFO.

   Is SYSTEM CHECK indicated?

   YES : **TROUBLESHOOT THE IMMOBILIZER SYSTEM ACCORDING TO THE RESULTS OF THE SYSTEM CHECK**.

   NO : Go to step 2.

2. Open wire check (GND line):

GETtheMANUALS.org

- 1. With the ignition key removed from the ignition switch and with all the doors closed, operate the keyless transmitter LOCK and UNLOCK several times in the vehicle.

Do the door lock actuators work normally?

YES : The GND wire is OK. Go to step 3.

NO : Repair an open or high resistance in the ground wire or poor ground (G101).

3. Open wire check (IG1 FUEL PUMP line):
   - 1. Turn the ignition switch to ON (II).
   - 2. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     Test circuit IG1 FUEL PUMP

     Test point 1 Immobilizer-keyless control unit 7P connector No. 6 (BLU)

     Test point 2 Body ground

Fig. 7: Measuring Voltage Between Test Points 1 And 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The IG1 FUEL PUMP wire is OK. **Replace the immobilizer-keyless control unit** See **IMMOBILIZER-KEYLESS CONTROL UNIT REGISTRATION** or **IMMOBILIZER-KEYLESS CONTROL UNIT REMOVAL AND INSTALLATION**.

NO : Repair an open or high resistance in the wire.

IMMOBILIZER INDICATOR DOES NOT GO OFF

GETtheMANUALS.org

Fig. 8: Immobilizer System Symptom Troubleshooting Flow Chart (Immobilizer Indicator Does Not Go Off)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. Immobilizer system check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Connect the HDS to the data link connector (DLC).
   - 3. Turn the ignition switch to ON (II).
   - 4. From the SYSTEM SELECTION MENU, enter IMMOBI, then select IMMOBILIZER INFO.

     NOTE: **If the HDS does not communicate with the immobilizer-keyless control unit, check the power, ground, and K-line connections.**

   - 5. Do the SYSTEM CHECK from the IMMOBILIZER INFO.

   Is N-1 OK indicated?

   YES : **Replace the gauge control module** See **GAUGE CONTROL MODULE REMOVAL AND INSTALLATION** or **Rewriting the ODO Data and Transferring the Maintenance Minder™ Data to a New Gauge Control Module**

   NO : **Replace the immobilizer-keyless control unit** See **IMMOBILIZER-KEYLESS CONTROL UNIT REGISTRATION** or **IMMOBILIZER-KEYLESS CONTROL UNIT REMOVAL AND INSTALLATION**.

IMMOBILIZER-KEYLESS CONTROL UNIT REGISTRATION

PROCEDURE

1. HDS DLC - Connection
   1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
   2. Turn the ignition switch to ON (II).

GETtheMANUALS.org

3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 9: Identifying Data Link Connector (DLC)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Immobilizer Keyless Control Unit Registration
    1. Have all registered keys and the ECM/PCM code.
    2. Select IMMOBI from the SYSTEM SELECTION MENU, then select IMMOBILIZER SETUP.
    3. Select REPLACE IMMOBILIZER RECEIVER/KEYLESS CONTROL UNIT.
    4. Do the registration according to the instructions on the HDS screen.
    5. Check that the engine can be started with the newly registered keys.
    6. When prompted by the HDS, do the keyless transmitter programming.
    7. Make sure the keyless transmitter operation works properly.

IMMOBILIZER-KEYLESS CONTROL UNIT REMOVAL AND INSTALLATION

REMOVAL

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

1. Upper Column Cover
    1. Carefully pry out the dashboard meter visor blind cover (A) with the appropriate trim tool to detach the clips (B) and the hook (C), then tuck up the dashboard meter visor blind cover.

GETtheMANUALS.org

Fig. 10: Identifying Dashboard Meter Visor Blind Cover, Clips And Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Detach the hooks (A), then remove the upper column cover (B).

Fig. 11: Identifying Upper Column Cover And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Lower Column Cover
    1. Turn the steering wheel to the left. Remove the screw (A) securing the lower column cover (B) from the front side.
    2. Turn the steering wheel to the right. Remove the screw securing the lower column cover from the front side.

GETtheMANUALS.org

Fig. 12: Turning Steering Wheel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the screw (A), then remove the lower column cover (B).

GETtheMANUALS.org

Fig. 13: Identifying Lower Column Cover And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Immobilizer-Keyless Control Unit
    1. Disconnect the connector.
    2. Remove the immobilizer-keyless control unit (A).

GETtheMANUALS.org

Fig. 14: Identifying Immobilizer-Keyless Control Unit
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

1. Immobilizer-Keyless Control Unit
    1. Install the immobilizer-keyless control unit (A).
    2. Connect the connector.

Fig. 15: Identifying Immobilizer-Keyless Control Unit
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

2. Lower Column Cover
    1. Push in on the lower column cover just above ignition switch opening (A) to engage the column cover with the locking tab (B).

Fig. 16: Identifying Ignition Switch Opening And Locking Tab
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Install the lower column cover (A), then install the screw (B).

GETtheMANUALS.org

Fig. 17: Identifying Lower Column Cover And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Turn the steering wheel to the left. Install the screw (A) securing the lower column cover (B) from the front side.
4. Turn the steering wheel to the right. Install the screw securing the lower column cover from the front side.

GETtheMANUALS.org

Fig. 18: Turning Steering Wheel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Upper Column Cover
    1. Install the upper column cover (A). Make sure the hooks (B) snap into place securely.

Fig. 19: Identifying Upper Column Cover And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Install the dashboard meter visor blind cover (A). Make sure the clips (B) and the hook (C) snap into place securely

GETtheMANUALS.org

Fig. 20: Identifying Dashboard Meter Visor Blind Cover, Clips And Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 21: Identifying Data Link Connector (DLC)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

5. Immobilizer keyless Control Unit - Registration
    1. **Do the immobilizer keyless control unit registration** See **IMMOBILIZER-KEYLESS CONTROL UNIT REGISTRATION** or **IMMOBILIZER-KEYLESS CONTROL UNIT REMOVAL AND INSTALLATION**.
6. Immobilizer Key - Registration
    1. **DO THE IMMOBILIZER KEY REGISTRATION**.

IMMOBILIZER SYSTEM STATUS LOG

If you suspect there is an immobilizer system problem, check the status log in the HDS.

1. Connect the HDS to the data link connector (DLC).
2. Turn the ignition switch to ON (II).
3. On the HDS screen, at SYSTEM SELECTION MENU, enter IMMOBI, then select IMMOBILIZER SETUP, select SYSTEM CHECK, NUMBER of KEYS and STATUS LOG, then select STATUS LOG.
4. Check the STATUS LOG count. Troubleshoot the status with the highest count first. If no counts are listed, the immobilizer system is OK. Continue with normal symptom troubleshooting.

Status Log No.	Detected Item	Probable Cause
A-1	KEY CODE MISMATCH 1 (Code format correct, but code data does not match)	• The key was not registered • Interference from metal such as key chains • Low battery voltage
A-2	KEY CODE MISMATCH 2 (Incorrect code format)	• Ignition switch was turned to ON (II) with another type of immobilizer key or aftermarket key • Interference from metal such as key chains • Low battery voltage
A-3	KEY CODE MISMATCH 3 (No transponder detected)	• Ignition switch was turned to ON (II) with another type of immobilizer key or aftermarket key • Interference from metal such as key chains • Low battery voltage • Key failure • Immobilizer-keyless control unit failure
B-1	PCM CODE MISMATCH 1 (Code format correct, but code data does not match)	• PCM was not registered correctly • Low battery voltage • Poor or loose terminal connections at the immobilizer-keyless control unit • Communication line electrical noise
		• PCM was not registered correctly • Low battery voltage

GETtheMANUALS.org

B-2	PCM MISMATCH 2 (Incorrect code format)	• Poor or loose terminal connections at the immobilizer-keyless control unit • Communication line electrical noise
C-1	IMOES UNIT MISMATCH 1 (Code format correct, but data does not match)	• Imoes unit was not registered correctly • Communication was not good between the imoes unit and the immobilizer-keyless control unit because of low battery voltage • Communication was not good between the imoes unit and the immobilizer-keyless control unit because of electrical noise
C-2	IMOES UNIT MISMATCH 2 (Incorrect code format)	• Imoes unit was not registered correctly • Communication was not good between the imoes unit and the immobilizer-keyless control unit because of low battery voltage • Communication was not good between the imoes unit and the immobilizer-keyless control unit because of electrical noise
D-1	S-NET LINE PROBLEM 1 (Short to ground)	• Low battery voltage • Poor or loose terminal connections at the immobilizer-keyless control unit and the PCM • Communication line electrical noise
D-2	S-NET LINE PROBLEM 2 (No communication)	• Blown fuse • Harness open from imoes unit to immobilizer-keyless control unit • Communication was not good between the imoes unit and the immobilizer-keyless control unit because of low battery voltage • Communication was not good between the imoes unit and the immobilizer-keyless control unit because of electrical interference • Imoes unit failure • Immobilizer-keyless control unit failure
D-3	S-NET LINE PROBLEM 3 (Open line or PCM failure)	• Open or short in the harness from the PCM to the immobilizer-keyless control unit • Low battery voltage • Poor or loose terminal connections at the immobilizer-keyless control unit and the PCM • Poor S-NET data communication due to electrical interference

IMMOBILIZER-KEYLESS CONTROL UNIT INPUT TEST

GETtheMANUALS.org

NOTE: **SRS COMPONENTS ARE LOCATED IN THIS AREA. REVIEW THE SRS COMPONENT LOCATIONS , and PRECAUTIONS AND PROCEDURES before doing repairs or servicing.**

1. Turn the ignition switch to LOCK (0).
2. **Disconnect the immobilizer-keyless control unit 7P connector** See **IMMOBILIZER-KEYLESS CONTROL UNIT REGISTRATION** or **IMMOBILIZER-KEYLESS CONTROL UNIT REMOVAL AND INSTALLATION**.

Fig. 22: Immobilizer-Keyless Control Unit 7P Connector Terminal Layout
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Inspect the connector and socket terminals to be sure they are all making good contact:
   - If the terminals are bent, loose, or corroded, repair them as necessary, and recheck the system.
   - If the terminals are OK, go to step 4.
4. With the connector still disconnected, do the following input tests:
   - If any test indicates a problem, find and correct the cause, then recheck the system.
   - If all the input tests prove OK, go to step 5.

Cavity	Wire	Terminal name	Test condition	Test: Desired result	Possible cause if desired result is not obtained
2	YEL	S-NET	Jump the SCS line with the HDS, **disconnect PCM connector A (49P)** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS**	Measure the voltage to ground: There should be about 5 V.	• An open or high resistance in the wire • A short to ground in the wire
				Check for continuity between the terminal and PCM connector A (49P) terminal No. 17: There should be	• An open or high resistance in the wire • Faulty under-dash fuse/relay

GETtheMANUALS.org

				continuity.	box
			Disconnect the battery negative terminal	Measure the resistance between the terminal and body ground: There should be more than 50 kohms.	• Faulty under-dash fuse/relay box • Poor ground (G101) • An open or high resistance in the ground wire

5. Reconnect the connector to the immobilizer-keyless control unit, and do the following input tests:
   - If any test indicates a problem, find and correct the cause, then recheck the system.
   - If all the input tests prove OK, **replace the immobilizer-keyless control unit** See **IMMOBILIZER-KEYLESS CONTROL UNIT REGISTRATION** or **IMMOBILIZER-KEYLESS CONTROL UNIT REMOVAL AND INSTALLATION**.

NOTE: **After replacing the immobilizer-keyless control unit, DO THE IMMOBILIZER KEY REGISTRATION.**

Cavity	Wire	Terminal name	Test condition	Test: Desired result	Possible cause if desired result is not obtained
7	RED	+B BACK UP	Under all conditions	Measure the voltage to ground: There should be battery voltage.	• Blown No. A29 (10 A) fuse in the under-hood fuse/relay box • Faulty under-dash fuse/relay box • An open or high resistance in the wire
6	BLU	IG1 FUEL PUMP	Ignition switch ON (II)	Measure the voltage to ground: There should be battery voltage.	• Blown No. B4 (15 A) fuse in the under-dash fuse/relay box • An open or high resistance in the wire
1	BRN	GND	In all ignition switch positions	Measure the voltage to ground: There should be less than 0.2 V.	• Poor ground (G502) • An open or high resistance in the ground wire
3	LT BLU	K LINE	Under all conditions	Measure the voltage to ground: There should be pulse voltage (digital	• Faulty control unit on the K-LINE
